A. C. LESLIE & CO. Ltd, MONTREAL Managers, Canadian Branch.

The Radiators You Sell

have a whole lot to do with your success in business. You might just as well sell the most satisfactory and profitable line of radiators as the other kind. Scores of dealers have had the fact brought home to them that

"Sovereign" Radiators

are by far the most satisfactory and profitable line to handle. They are handsome in design, and ever effective in operation. Why not drop us a one cent post card asking for more information.

Something You Ought to Be Selling

New Century Style "B"

The New Century method of washing has succeeded, not because of its ease, speed and simplicity only, but because it gives better results than are possible with any other method.

This machine has a wringer stand too, not a rickety affair, but a convenient, strong, rigid attachment, always in position, never in the way.

The experience is in the machine. You'll hear no complaints of it and have no excuses to make.

They are the best there is.

Dealers, don't load up with experiments, it is a losing game

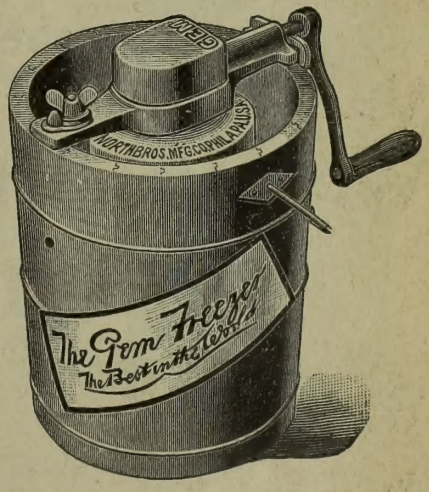
American Twin Freezer

Freezes two flavors of Ice Cream or an Ice or Sherbet and Ice Cream at one and same time, in one freezer.

SOMETHING ENTIRELY NEW —NEVER DONE BEFORE.

THE can is divided in two parts by a vertical partition. One flavor is placed in one, the other in opposite side of can, in each of which the scrapers, etc., operate. The can cannot be turned as in old style freezers, because of the partition. It is therefore swung to and fro by a rocking motion of the crank. This is a more comfortable and much easier movement. It is very much less tiresome than turning a crank. One can sit back in a chair with freezer alongside and rock the crank to and fro without discomfort or undue exertion and even read at same time. Although two flavors are frozen at once and with less exertion, no more time is required than in old style freezers.

The **Pails have electric welded wire hoops,** which are guaranteed not to break or fall off; Cans are of heavy tinplate with **drawn steel bottoms** that are guaranteed not to fall out or break and do not leak, the strongest and most durable Freezer Can made; the **Automatic Twin Scrapers** by their positive action insure perfect scraping of frozen particles from side of can. All inside parts are heavily coated with pure block tin, and outside parts all thoroughly galvanized.



SOLD BY LEADING JOBBERS

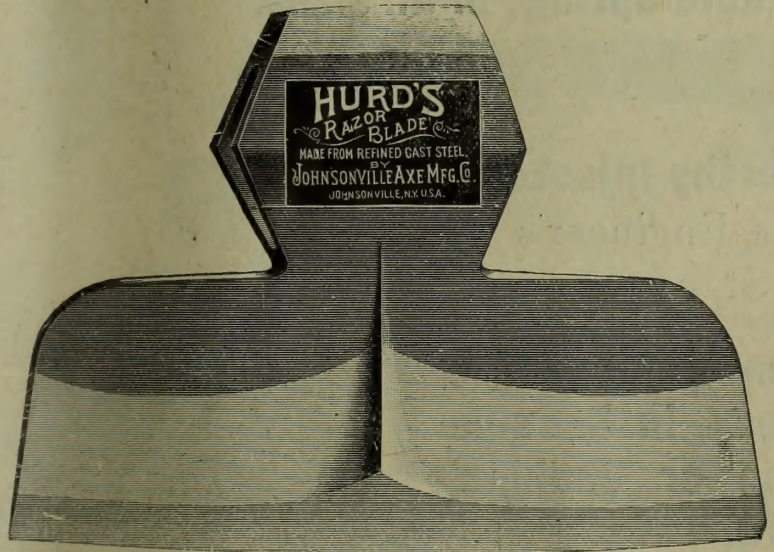
HURD'S AXES

Quick Sellers



Five Years ago the name "Hurd's" was not known in Canada. To-day there are more ***Hurd's Axes*** sold than any other make.

The quality is superior, and the next surprising thing is, that they are all sold at the same price—or lower—than the Canadian Makes.

This is a line that is not cut. There is money in it for you. ***Get wise.***

Hurd's Bench Axe. Canada Pattern. Extra Full Weight Crucible Cast. Steel Bit, Polished and Bronzed.

No. 2	Width cut in. 4½	No. 5	Width cut in. 6

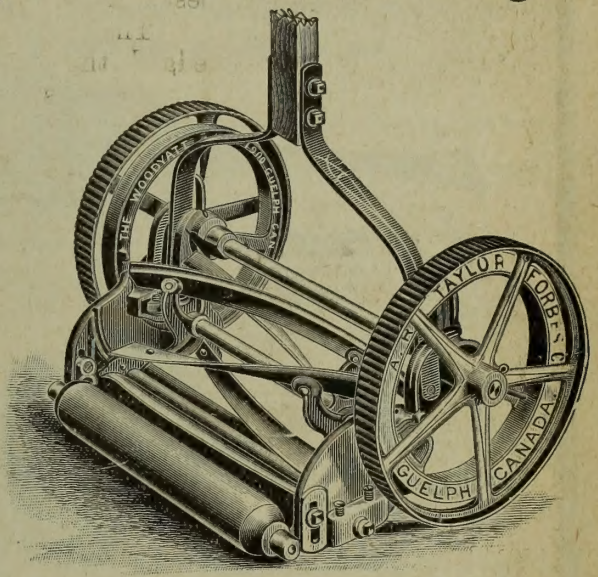
You Should Make up Your Mind

to handle only the best lawn mowers next season.

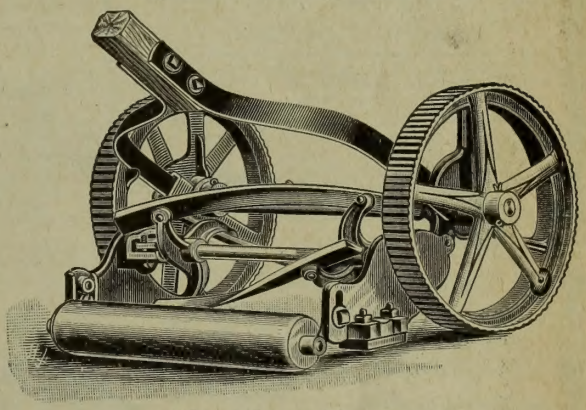
There is no money **in the long run** in handling cheap goods. You may make more money at first from your sales but lose it again through dissatisfied customers making repairs, and possibly loss of business.

No such trouble will be experienced if you stock **"Woodyatt"** and **"Star"** lawn mowers. They are made of the highest grade of material and skilled workmanship is employed in their manufacture.



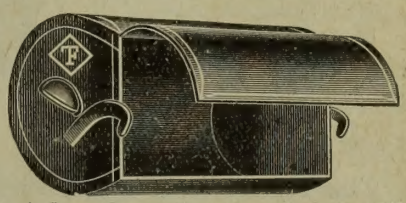
We have examined many makes of lawn mowers and do not know of others that give better **value for the money.**

"Woodyatt" and "Star" mowers **sell well,** and their buyers remain satisfied users.



Place your **orders early** and make sure of getting your mowers for the opening of the spring business.

We have **other mowers** and a large line of goods useful in keeping lawns in repair.



Ask our travellers about them.

"Woodyatt" Lawn Mowers.
Five sizes, 12, 14, 16, 18 and 20 in.

"Star" Lawn Mowers.
Three sizes, 12, 14, and 16 in.

Galvanized Iron Grass Catchers fitting "Woodyatt" and "Star" Lawn Mowers.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines These enquiries come from Wholesalers, Manufacturers and Retail Dealers, who usually intimate they have looked through Hardware and Metal, but cannot find any firm advertising the line in question. In the majority of cases these firms are anxious to secure the information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay them to advertise in larger space.

Advertising Course

COMPLIMENTARY to Retail Dealers

Here is a rare opportunity for ambitious dealers and retail salesmen.

Correspondence courses are not offered absolutely free of charge every day in the year.

The following lessons comprise the course :

Lesson No. 1—Principles of Advertising
Retail Salesmanship Interior Display Store Arrangement

Lessons 3 and 4—The Show Window

Lesson No. 5—Printing

Lessons 6 and 7—Elementary Publicity
Circulars Booklets House Organs
Follow-ups Stunts

Lessons 8 to 10—Publicity
Ad.-Writing

Lesson No. 11—Out-door Advertising

Lesson No. 12—General Summary
Experiences of Students, etc.

Dealers who applied for the course in April have received the first four lessons. They tell us that subsequent lessons are anticipated with the same interest that attends the reading of a fascinating "continued story."

The first lesson will be mailed upon receipt of your application. Other lessons will follow at intervals of one month or a little less.

Just drop us a line somewhat as follows :

"The Dover Mfg. Co.,

DOMINION WIRE MANUFACTURING CO.

MONTREAL TORONTO LIMITED

Start The New Year Right

This is the time of the year when all Hardware men are planning to try and make "as far as lays in their power" the year on which we have just entered, just a little better than the year that has closed.

It is with this feeling that **The Dominion Wire Manufacturing Co.** has stepped into the New Year, and with the co-operation of our many friends we trust that the business relations which will exist between our customers and ourselves will be productive of mutual advantage to buyer and seller alike.

PENBERTHY

The Genuine Penberthy Automatic Injector stands to-day in a class by itself—the acknowledged peer of all other makes. The simple construction, the excellent workmanship, the quality of metal, the rigid factory test, coupled with our 25 years' experience, has placed the Penberthy in that enviable position. We are firm believers in doing our best, and the finished product of our factory will prove if we have been successful or not.

We take this opportunity of extending our hearty thanks to the Hardware Trade of Canada for the splendid patronage given us the past year, and we hope we will merit a continuance of these favors. Our best wishes go out to every reader of HARDWARE AND METAL for a Very Happy and Prosperous New Year.

THE MOST DURABLE

The most economical and practical, and the most all round satisfactory wire fence on any market, is unquestionably the

"Dillon" Hinge-Stay Field Fence

It is practically unbreakable for the reason that the strand wires give way under weight and automatically readjust themselves when the weight is removed. The hinged stay does it.

IMPORT SHEET GLASS

This is the time of year when Sheet Glass is booked for import, to be delivered in Spring. This year we booked a very large number of imports, and the glass was so satisfactory that we are having no difficulty in booking orders with the same dealers; but we want to get the few others that would not book this Spring.

Of course there are reasons why our customers are all so well pleased :

1st.—The Glass itself is of a very fine quality. The Single Glass being good, and the D.D. **running** a full **24** oz. to the foot.

2nd.—The Glass is extra well packed.

3rd.—The cases are very heavy and large sizes, all battened.

4th.—The **price** is always the **lowest offered** and **guaranteed** that way.

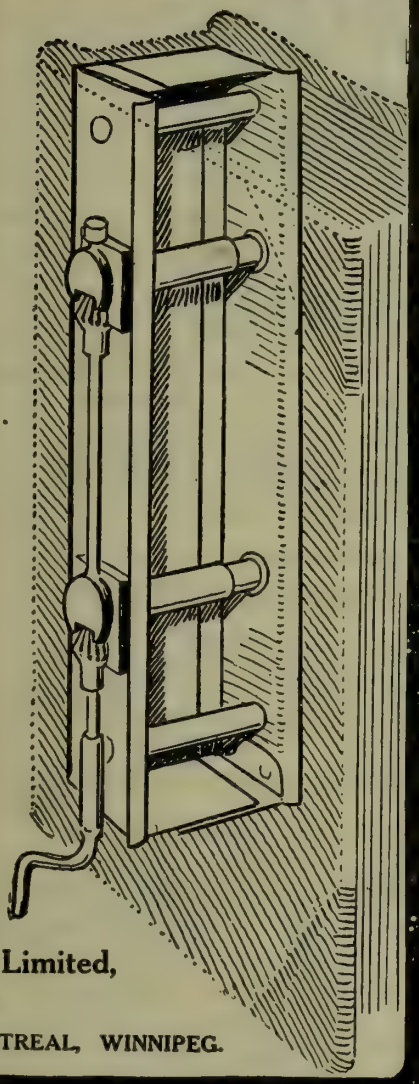
Crain



Binder Mechanism

for simplicity, ease of operation and strength is without a peer.

The frame is of cold rolled steel. The screws in the nickel-plated brass working posts are turned by bevel gears, the gear-wheels of which are of hardened steel and operated by the rod over which the key fits. The two smaller posts strengthen the binder and keep sheets in proper alignment.

No spring or rachets are used. Direct pressure after the principle of a vise, securely binds the leaves at points 1-500 of an inch apart. When locked the only way to get a leaf out of a Crain ledger is to tear it out.

Send for our booklet which gives complete information.

500 Candle Power

OUR No. 2 SINGLE ARC
500 Candle Power

THE "S.S." GAS LIGHTING MACHINE—The only gas machine that runs without pumping under a uniform pressure. The only gas machine that will successfully operate one gas fixture if desired. The only gas machine that can be generated in thirty seconds and without the use of alcohol or liquid gasoline. The only gas machine with a safety vent and escape pipe. The only gas machine with an automatic governor. The only gas machine with a seamless generator and the only one with an entirely seamless copper tank.

THE "SYLVESTER" LIGHT—Increases the brilliancy 100 per cent. Decreases the operating cost 50 per cent. No globes to break or clean. No mantles dependent on wire or magnesian supports. Less heat than an electric arc and gives more light. No odor from unburned gas or the products of combustion. No sound from the light, absolutely noiseless. No shadows cast, all light thrown down. No flickering, the only steady light upon the market. A gas fixture more ornamental and unique, has never been invented.

Not one drop of oil passes through a hollow wire. We can give you cheapest insurance.

THE "SYLVESTER" NEW PROCESS MANTLE. Shipped in an envelope. Upon removing from envelope, can be crumpled up without danger of breaking. When straightened out, it's just as good as new.

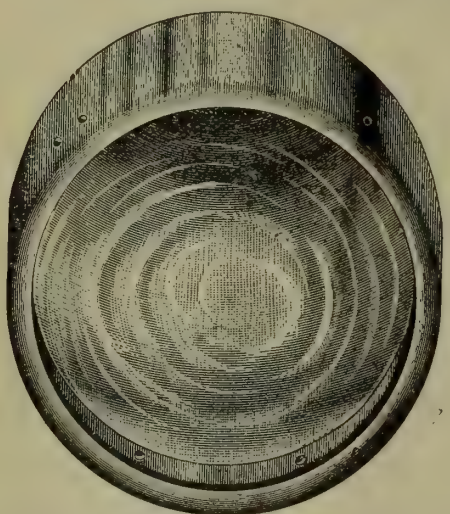
Just a Few Ammunition Facts

There is no reason why any man in Canada using a firearm should require any other ammunition than "DOMINION."

And there is no reason why any dealer should have to stock up with half a dozen lines or more, when a complete range of Dominion—which he has to carry anyway—offers an unexcelled load for every modern firearm—Rifle, Pistol or Shot Gun.

1907 has been a record year—sales have grown enormously—"Dominion" has replaced imported ammunition to a heretofore unknown extent. This means that sportsmen and riflemen are suited.

Scores of dealers are cutting out other lines altogether—finding that Dominion Ammunition meets all requirements.



If you are in doubt as to the possibility of your doing so, write us.
We will give you pointers as to what others have done.

The Dominion Cartridge Co., Ltd.

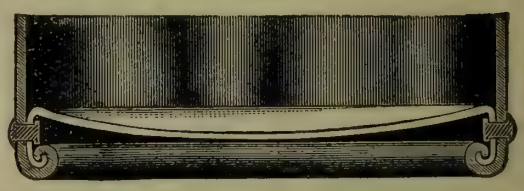
MILK CAN TRIMMINGS



COMPLETE SETS

Comprising one broad hoop roll-rim bottom, concave pattern; body hoop 6 inches wide, 20 gauge; top hoop 4 inches wide, 14 gauge; one cover; one pair malleable side handles; one pair steel top handles. If wanted with malleable top handles, 7 cts. per set extra list.

COMPLETE SETS

Gallons	10	15	20	25	30	40
Case Lots, sets,	6	6	6	6	6	6

The Roll-rim has no sharp turns, therefore the grain of the metal is not broken, and having a broad wearing surface on the bottom it cannot damage floors. Ample space is left between the bottom and the hoop for the insertion of the Body of the Can. It is the neatest and strongest in appearance, and is supplied with Concave bottoms. By examining the cut, anyone can readily see that this style of construction makes it the strongest Bottom ever produced. They do not cost any more than inferior Bottoms. If you want to keep ahead of your competitors, use Kemp's Roll-rim Milk Can Bottoms.

New Year Resolutions

Sensible Advice given by a Toronto Preacher—"Don't Worry and Don't Stick too Close to your Desk," the lesson to be learned from the experience of New Yorkers.

DON'T LIVE TOO FAST.

There is a lesson and a warning for business men in the fact that there were 186 deaths from heart disease in this city last week, says the New York Herald, an increase of thirty per cent. as compared with the corresponding week of last year, and that the figures for the entire twelvemonth will very nearly equal this ratio of increase.

While the average duration of human life has been lengthened three or four years during the present generation the number of deaths from heart disease in New York and other American cities has steadily increased. This is admittedly due to the stress and strain of modern life, but more than all to the "worry" it entails among business men.

As experts point out, the anxiety and strain caused by recent monetary troubles has undoubtedly been the cause of many recent deaths from heart disease, especially among men advanced in years. Heavy financial losses in some cases, in others worry over apprehended disasters that will never occur cause loss of appetite and sleeplessness and a general lowering of vitality which renders the subject an easy prey to any prevailing disease, or if the heart be weakened by a long period of improper living it gives way.

Physicians have long been preaching the doctrine that American business men live too fast. With the telegraph, the ocean cable, the telephone and other modern facilities the man of affairs can do in one hour work that formerly would have occupied six. It might be thought his working day would be correspondingly shortened. Nothing of the sort has occurred. The speed with which trade can be effected has simply accelerated his pace, and he not only works faster, but more hours than ever, with corresponding increase of business and responsibilities. To keep up this energy he eats too much, sometimes drinks too much—for a man who spends most of his working hours at his desk and takes no open air exercise. Physical deterioration is inevitable, and when a period of more than usual stress and anxiety arrives he is liable to succumb.

Even from a sordid money-grabbing point of view his manner of life is a mistake. The day's shooting, yachting, riding or golf and an occasional change of scene give new strength and vitality and a clearer brain. In perfect health and possession of all his faculties the man has an acuter insight for the direction of affairs and can accomplish more than if he spent the whole time in his office or counting room with his nose to the grindstone. The man who thus preserves his health pooh-poohs as mere spectres a host of things which otherwise would worry him into his grave, and he will be living, active and prosperous for a generation after the survivors among his unwise colleagues have passed into a wretched and enfeebled premature old age.

What American business men must learn is to slow down, take wholesome recreation and above all quit worrying, even over real troubles when they come, whereas most of them now worry over troubles that never come.

GO SOFTLY IN 1908.

Let them snicker at your New Year's resolution if they will, but make it, and publish it, and keep it.! said Rev. Byron Stauffer, of Toronto, last Sunday. Man goes forward by plodding and by leaping. It is a mistake to imagine that no one can get goodness in a single bound. There is the army mule's tug and the kangaroo's leap in a man's moral evolution. A man needs the mule's tenacity to keep the ground he has gained ; he needs the kangaroo jump once in a while when he decides to go forward. Make a leap onward and upward this New Year, and then doggedly hold the ground.

And what shall you resolve ? To work harder ? Well, maybe that is needed in your case. True, the man that really succeeds in making progress never did trust in the eight-hour day overmuch. But likely you're working hard enough. To save money ? Perhaps, it's for you, but my opinion is you're doing fairly well as it is. To save a little is the safe road to competency, but to try and save much is the sure road to misery.

But twenty-five hundred years ago a king wrote in the front of his diary these words : "I shall go softly all my years." It will do for you and me today and it may well be our New Year resolution for 1908. "I shall go softly." The same word is used once in the Old Testament where a man speaks of velvet. So the phrase means, "I shall walk in velvet shoes all my days." "I shall handle folks and problems with kid gloves during 1908."

I shall go softly, gratefully, not grumblingly ; humbly, not proudly ; thoughtfully, not rashly ; prudently, not recklessly ; gently, not roughly. Activity stands in danger of being boisterous. The touch of intensity is often harsh. The brisk word is sometimes brusque. In our physical strength we forget the power of kindness.

Make the resolution on account of the manners it will give you. If two countrymen, equally uncouth, were to be put into Toronto's finest drawing room, the quieter-voiced of the two would attract the least notice. The soft word will reform the world. Scolding won't do it. The shriek of the impassioned declaimer won't do it. But the kind word will be a lever that will lift a thousand times its own weight. The wind howled over the lakes the other week. With its roar it beached a few small craft and wrecked a steamer or two. But today ten thousand ships are awaiting the great arm of the silent moon in lifting the whole ocean in order to carry them from their ports ! Say it to-day: "During 1908 I shall go softly."

PASS THIS ALONG.

The following practical advice, printed on a card for enclosing in envelopes containing receipts for remittances, issued by the Penton Publishing Company, publishers of the Iron Trade Review, Cleveland, is worthy of being passed along by readers of this paper :

"If all business houses and business men in America will do their level best at this time to pay every bill, large or small, as fast as they can, it will help very materially in the prompt restoration of confidence.

"We are doing all we can to help our customers on the one hand, and on the other, the money you have sent us will be paid out by or before this reaches you.

"This money panic must quickly pass by, and then, with confidence restored, your customers and ours are going to begin to place orders, and the establishments which supply the best goods and seek the hardest for business, will get there first."

TEAM WORK.

No one thing is so essential to the prosperity of a business establishment as team work. By this is meant the performance by every member of the force, in every department, of his assigned duties promptly and cheerfully, and further than this the co-operation of one department with another.

There is no unimportant work in connection with the manufacture and sale of goods. Every detail, no matter how apparently trivial, is essential.

These details are the result of experience and thought. They usually grow out of troubles which have arisen and must be guarded against in the future.

Orders are not issued for amusement or to provide somebody a job. They are intended to fulfill a definite purpose, and it is only by good team work in carrying them out, all along the line, that the house is kept running smoothly.

Good customers are often lost for a time—sometimes permanently—through a lot of insignificant little things, not important in themselves, but far reaching in their effect.

Business is made up of little things, and no one can say how comparatively important they are. Trifles make for perfection and nothing is perfect unless perfection is carried through all of its parts.

It is in carrying out the details, one man working with another, that team work counts.

Retail Hardware Association News

Official news of the Ontario and Western Canada Associations will be published in this department. All correspondence regarding Association matters should be sent to the secretaries. If for publication send to the Editor of Hardware and Metal, Toronto.

Ontario Executive Committee Meeting

The quarterly meeting of the executive committee of the Ontario Retail Hardware Association was held at the Queens Hotel, Toronto, on Tuesday, December 31, all the members being present, with the exception of W. G. Scott, Mount Forest, J. R. Hambly, Barrie, and F. R. Taylor, Carleton Place.

The meeting was called to order at 11.15. Second Vice-President Peart, St. Marys, occupied the chair. A letter was received from President Scott, explaining his inability to attend the meeting, owing to his holding the position of water commissioner of Mount Forest, it being necessary for him to give an account of his work to his electorate at the nomination meeting.

The recent death of the wife of Vice-President Hambly was reported by the secretary, and a resolution of sympathy passed by the executive.

The secretary's report was then read, showing the progress made in the various departments of the association work. The report was taken up clause by clause. The treasurer's report was also read, showing the association's finances to be in a very satisfactory condition.

Arrangements for Convention.

After a general discussion regarding the best time to hold the annual convention, it was decided that it be held at the time of the annual live stock show in Toronto between the dates of February 11 and 14, the convention to occupy two days, the programme to be arranged by the secretary and submitted to the executive committee for approval.

Collection of Accounts.

Letters were read from a large number of members of the association using the collection form letters, the majority of them favoring an arrangement being made with some firm of lawyers who would act with the association in sending out a legal letter to supplement the two association collection letters. A letter was received from Walter B. Laidlaw, a Toronto solicitor, offering to issue such legal letters from his office at a nominal charge of 25c. each. The executive considered this matter favorably and instructed the secretary to complete arrangements with Mr. Laidlaw.

Reports received from members using the collection service were highly satisfactory, many members stating that results had been secured from accounts which had been given up as impossible of collection.

White Lead Branding.

Letters were read from the various manufacturers of white lead in Canada, in reply to the association's request that branding of a second grade lead as No. 1 be discontinued. Several of the leading manufacturers expressed themselves as in hearty sympathy with the suggestion and promised to support the request if the matter is taken before the paint, oil and varnish section of the Canadian Manufacturers' Association, to which all Canadian White Lead manufacturers belong. It was decided that the secretary write Dakers Cameron, secretary of the above association, requesting that No. 1 brand be abolished, and all white lead marked as Genuine, No. 2, 3, 4, etc.

J. H. Morin, manager of the Toronto branch of P. D. Dods & Co., appeared personally before the executive, but as the matter had been dealt with, a further discussion was unnecessary.

One of the executive members announced that the reports of the Government Inspector of White Lead Adulteration could be secured on request from the Agricultural Department, Ottawa. This inspector makes a practice of visiting hardware stores in different parts of the country, making small purchases of white lead, samples being forwarded to the government officials at Ottawa for analysis, the reports being afterwards printed, for distribution by the Agricultural Department.

A short discussion on the adulteration of linseed oil was also participated in, it being reported that some unscrupulous merchants adulterate oil on their premises, and offer for sale at much below the cost price of the genuine article. No action will be taken in this matter at present.

Legislative Matters.

The secretary reported that he was still in correspondence with Attorney-General Foy regarding the amendment of the Division Court Act abolishing the exemption in section 180 in order to make small accounts as low as $5 collectable by garnishment by procedure in the magistrate's court. In case of unfavorable action by the government it was decided that the trade generally be asked to use their influence with members of the legislature to secure this change in the law.

It was reported that the mail order houses were again agitating the question of a C.O.D. parcels post system in subsidized papers in various parts of the country. It was considered unlikely that the bill will be re-introduced in parliament this session, however, but instead brought forward with renewed vigor next year. Whenever the matter is brought up again, therefore, it was decided that an active campaign be carried on against the proposal.

The executive also decided to take action regarding the bill to be introduced in parliament this session respecting the incorporation of industrial and co-operative societies. It is understood that the proposed legislation aims to make it easy for farmers, mechanics and others to establish co-operative enterprises without securing charters as incorporated companies. As the history of enterprises of this kind in Canada has been a series of failures, causing loss to the farmers and workingmen who have invested their money, while also demoralizing prices of retail merchants, it was decided that the association enter its protest against the legislation. Copies of the bill will be supplied to each member of the executive, and if necessary the trade will be asked to write letters to the Ottawa M.P.'s urging the defeat of the measure.

Selling to Consumers.

Several complaints of jobbers and manufacturers selling to consumers were read before the executive, and as it was felt that this is probably the most vital matter for the association to oppose, the secretary was instructed to write the various concerns complained of, asking for an explanation and for a statement of their position, to be read before the annual convention of the association in February.

Cartage Charges.

It being reported that some members had an arrangement with certain jobbing houses that cartage charges at jobber's end be kept track of and deducted monthly from the jobber's statements it was resolved that the executive urge all members of the association to adopt this plan.

It was felt that it was unfair to the retail trade as well as to travelers to encourage the securing of rebates from travelers, of amounts covering cartage charges on shipments. These rebates, it is understood, are added to the travelers' expense accounts, and while paid by the jobbers, the indirect method of securing a settlement was condemned.

Stamping Weight on Parcels.

The secretary was instructed to write the Wholesale Hardware Association, requesting that the weight of all parcels shipped be stamped on the packages, along with the address of the consignee, whether shipments be made by freight or express. The adoption of this suggestion would prevent payment of over-charges to railway and express companies, and as some jobbers are already stamping their packages, it was felt that the wholesalers generally should do so.

Enamelware Seconds.

The secretary was instructed to write R. Blain, M.P. for Peel, asking that he, as a hardware merchant, endeavor to secure legislation to enforce the stamping of enamelware seconds as such, in order to protect the general public from deception, and the retail hardware trade from unfair competition in putting their first grade enamelware on the market. This action was taken as a result of a letter received from the Department of Trade and Commerce, Ottawa, stating that no existing legislation governed this matter.

One member of the executive committee announced that the unsatisfactory condition of the enamelware trade has caused him to discontinue handling it, he having established a crockery department in its place.

New List on Nails.

The secretary was instructed to write the Canadian nail manufacturers, requesting that the list on wire nails be revised, making the smaller nails the base, and running list prices down instead of up, in accordance with the suggestion made in Hardware and Metal of December 28. It was felt that the proposed change would do much to eliminate dissatisfaction of customers in selling nails and also discourage the existing price-cutting on this article.

Mutual Fire Insurance.

It was reported that a firm of insurance brokers in Toronto are preparing a proposition to be laid before the association before the annual meeting. The subject, therefore, was laid on the table to be brought up at the convention in February.

Organization Matters.

The secretary reported a steady growth in membership, many new members having been enrolled during the past six months as a result of the organization of the Collection Department. He had been unable to make any headway with the proposed Dominion association, owing to the disorganization existing among the trade in western Canada. Experience had shown also that the association could make good headway without an active organizer in the field, and it was, therefore, unnecessary to spend money for this purpose. The matter of district associations should be pushed, however, and district meetings called for, to be held at the various centres of trade throughout the province. The executive will consider this matter further at the annual convention.

Several members of the executive reported that some travelers are spreading reports that the association is on its last legs and likely to die a natural death before long. The answer to these knockers will be given at the annual convention in February. An organization which can bring together fifty or one hundred retailers at a convention, and in the face of strong opposition can maintain a substantial balance in its treasury, is not likely to fall to pieces, but, on the other hand, is likely to continue growing, both in membership and in the confidence of the trade throughout Ontario. As one member of the association put it: "It pays us to come down to these executive meetings and have a talk over trade matters, compare prices, etc., and if it pays us to do this several times a year it will amply repay any retail hardwareman to spend a couple of days at our annual convention, to talk over matters with men who can exchange valuable pointers with him."

The secretary also reported the receipt of a letter from the Canadian Wholesale Hardware Association, expressing the sympathy of that body "with the objects of the Ontario Retail Hardware Association, and pledging itself to use its best efforts to aid it in improving the conditions of the hardware trade."

Amendments to Constitution.

Notice was given that at the annual meeting in February motion will be made that the constitution be amended, providing for the holding of the annual convention at some date between January 1 and March 15, at the call of the executive committee, rather than on the second Tuesday in March, as the constitution now provides.

Notice was also given that motion should be made amending the constitution providing for amendments being made at the annual meeting by a two-thirds vote without the four weeks' notice now called for by the constitution.

The meeting adjourned at 4.30 p.m.

VALUE OF FARM LANDS.

In a recent address at Ottawa, M. Robins, Walkerville, pointed out that farm lands near towns and cities had grown enormously in value as compared with lands distant from the business centres throughout the country.

Merchants and manufacturers make the towns by their business enterprise, both in building up their own businesses and by organizing Boards of Trade to encourage outside investors to establish factories in the locality.

In this work they benefit themselves as well as enriching the owners of adjacent farm lands, some of whom are most thoughtless and ungrateful in neglecting to support their local mercity departmental stores, the owners of which pay no taxes or make no contributions to maintain the schools, churches and other institutions in the smaller towns.

Too often, also, the retired farmers in the small places are so unenterprising and conservative that they refuse to grant assistance to new industries after the public-spirited merchants have induced capitalists to agree to establish industries.

Much depends upon the local publisher. If he is alive to his own and his town's interests he will use all his influence to educate the farmers and retired farmers to the advantage of supporting their local merchants. The more trade given the local dealer the larger volume of stock and better selection of goods he will be able to offer his customers.

The local editor can, with little effort, secure plenty of material for articles showing that the prices of the local merchant compare favorably with those of the mail order houses, and that the future of the town depends upon the building up of its mercantile and manufacturing institutions.

If money is sent to the city mail order houses the local merchants are weakened, they cannot spend so much for advertising, the local paper suffers, the district becomes unprogressive and the value of both town and farm lands fails to advance or falls if the movement is not checked.

The country editor has nothing in common with the mail order millionaire, and if he does his duty to himself he will be an active supporter of local enterprise and a builder up of sentiment in favor of the local merchant as opposed to the catalogue houses.

COUNTERACTING MAIL ORDERS.

Where newspapers in towns and small cities are finding their local merchants are suffering from the inroads of the mail order houses, it might be worth while for them to adopt some plan such as that followed by the Rutland, Vt., Herald. The Herald started an advertising campaign in its own columns to demonstrate that it would be cheaper for the people of Rutland to buy goods at home. The first advertisement occupied nearly one hundred lines, double column and told how a local man wrote to a Chicago firm for a pyrography outfit, which he saw advertised in a magazine. After spending $4.10 and waiting twelve days he at last got the outfit complete. Had he bought the same thing locally he would have been able to secure it the same day for $2.90. Examples such as this could be found in every town, and, if the newspaper publisher has enterprise, he will discover them and make them public, to the benefit of local advertisers.

LARGE MAIL ORDER BUSINESS.

The annual report of Sears, Roebuck & Co., which has just been published, emphasizes the continued growth of the retail mail order business and the great place it is coming to hold in the distribution of goods in general. It appears that while in the calendar year, 1905, the company's sales were $27,604,253, and in 1906 were $37,943,472, that for the year ending June 30 last they were $50,722,839. There is thus an increase in the volume of business for the years covered by the reports of more than 80 per cent. over that of the calendar year 1905.

These figures enforce the seriousness of the competition which merchants of the country are called upon to meet and the need for unrelaxing efforts and increased enterprise and energy in the conduct of their business, says the Sporting Goods Dealer. There is also brought up anew to wholesale distributors and manufacturers serious problems in regard to the effect the mail order business has on the regular distribution of all classes of goods. In this condition of things, which does not promise to become more favorable for the marketing of goods in old channels, the manufacturers and jobbers will have to see to it that the retail dealers of the country obtain their goods on as advantageous terms as do catalogue houses.

A GOOD EXAMPLE.

The Saturday Evening Post, of Philadelphia, is setting a good example to the business community of America. All through the recent financial flurry it preached confidence and hope. Now its publisher, Cyrus Curtis, has followed up preaching by practice, and to show that he believes in the solidarity of conditions in general he has spent fifty thousand dollars in advertising the Christmas number of the Post. This is a splendid example and one that might with advantage be followed by other publishers and other business houses. Instead of accepting the words of the blue-ruin shouters, and believing that calamity awaits the business world, show people that this idea is wrong and set an example of courage and hope.

Travelers' Annual Banquet

Wit, Humor and Wisdom From the Spee ches at the Big Dinner Last Week—J E. Ellis, Edward Gurney, J. S. Willison and Others Pay Tribute to the Knights of the Grip—A Very Enjoyable Occasion.

The boys of the old brigade, the fully-fledged and the just-hatched members of that great brotherhood of drummers—more properly speaking, the Canadian Commercial Travelers' Association—were all present at the annual dinner in McConkey's banquet hall on Thursday evening, December 26th, and a jollier crowd than the two hundred and fifty knights of the grip who gathered around the tables it would be hard to find.

With President Lewis A. Howard beaming good humor at the table of honor, were, J. F. Ellis, Edward Gurney, Jas. P. Murray, J. S. Willison, Lieut.-Col. Stoneman, Jos. Oliver, Tom McQuillan, E. Fielding, Robt. Algie, and Geo. West.

LEWIS A. HOWARD, TORONTO.

The dinner part of the evening was pretty well looked after, but, as the gentleman beside The Grocer representative remarked, "It came too soon after the mighty big dinners everyone ate on Christmas day to be thoroughly enjoyed." However, by half-past nine the turkey and ices had been well disposed of, everyone got settled down comfortably with weeds and pipes going full blast, and through the smoke the speakers of the evening poured out their oratory and words of wisdom.

President Howard set the ball a-rolling by proposing the honored toast to the King, and if His Majesty could have heard the way the big family took up the song in his honor he would have wept tears of joy. Then in a few well-chosen words, indicative of material progress and prosperity, the president followed with the toast to Canada.

A couple of bright musical numbers were well received, and then J. F. Ellis, who, by the way, is a charter member and one of the original directors of the association, proposed the toast, "Our Manufacturing Interests." Mr. Ellis didn't seem to think he was expected to stick to his text, and wandered off onto a pet theme of his own, which, however, brought out a forcible point. He side-tracked himself onto the question of the evils and dangers of level railroad crossings and pleaded for the help of the members of the association in effecting a remedy. A membership of 22,000 is a big army, said Mr. Ellis. You travelers can do a great work in this matter by watching for the dangerous crossings, bringing them to the notice of your customers, and to the Railway Commission, and educating the people generally to demand adequate provision for safety. Coming back to the toast, Mr. Ellis said that our three chief industries, farming, fishing and manufacturing, go hand in hand and must be equally developed to develop the true wealth of Canada. With these industries prosperous, the country at large will be prosperous. Our manufacturers are beginning to reach out beyond the home markets and this also means success to Canada.

Edward Gurney, in replying, was in a jovial mood. He referred to his early experiences as a traveler, before the days of the association, "A long time back," as some of the boys sang out, and told of some of the things the travelers used to do in those days. Becoming serious, Mr. Gurney outlined the necessary characteristics of a salesman, whom he described as the main factor in business. "He must be a man of good brain, heart, liver, belly, physique," he said, "and with more courage than the most of them. The salesman should honestly represent the man by whom he is employed. This is the essence of his success." Above all, he must "make things git."

Speaking to the toast, Mr. Gurney immediately climbed to his familiar high-protectionist perch and swatted the Government for its seemingly bad policy toward the local manufacturer. "No agricultural country can be a great country," said Mr. Gurney. "What is going to be Canada's future ?. In forty years of business in Canada," he continued, with a wave-like motion of his big fist, "no line of business shows such a small percentage of returns as manufacturing."

In conclusion, Mr. Gurney appealed to the travelers to think and act for themselves. He would rather have the co-operation of the travelers. he said, than of any other body in the country. Because no other body was so close to the factors of business. "Think matters out," he said, "come to a reasonable decision, irresponsive of party, and then let the people feel ye !"

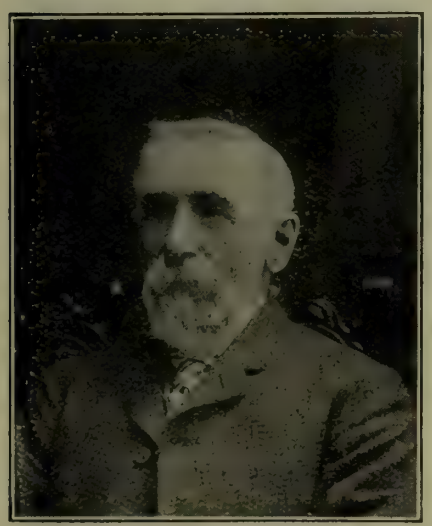
Everybody felt pretty good after this speech, given in Mr. Gurney's characteristically cool and deliberate manner, and they listened with appreciation while Master Wilfrid Morrison, the boy soprano, climbed on a chair on the raised platform and sang a couple of solos in a particularly pleasing way.

"Tom" McQuillan proposed the next toast, "Wholesale Mercantile Interests," in a bright and brief way, and the three cheers and a tiger which were handed out for him showed what a place the past-president has in the hearts of his brother travelers.

Jas. P. Murray, president of the Toronto Carpet Company, who responded, said that perhaps if he had stayed longer on the road he might have obtained a better grasp of the gift of gab, and, speaking to the toast, proceeded to tell something of the position of the woollen industry of Canada. Mr. Murray cited a host of facts and figures, touching principally on the disadvantages which Canadian woollen manufacturers have

BILLY COLVILLE,
Who Responded to the Toast to the Ladies.

to contend with, and which are placing the industry in a serious position.



After this "Brother" Donald McGregor, always popular with the travelers, stepped up and sang a couple of stirring songs in a way that brought down the house.

Ex-Alderman Joseph Oliver smiled as if he were perfectly sure of election when he rose to propose the toast, "Our Association," and well he might, for as a past president of the C.T.M.B.A. and for himself he was given a mighty encouraging reception. He modestly and wisely refrained from any reference to municipal politics, and getting down to business at once, made a neat speech, remarking that Mr. Ellis and his associates had built better than they knew when they had organized the association. With the financial status and the number of members the body was now able to boast, it could justly be called a big and growing success.

E. Fielding, the association's financial watchdog, reviewed the growth of the body, in a comprehensive manner, and spoke of the features by which the organization was superior to an insurance company, from a financial standpoint.

Following this came a generous—in point of length—selection by Highland Piper Hay, late of the Black Watch Band, which some of the "boys" liked exceedingly, and some didn't like at all. It all depended on one's bringing up, as more things do than we usually realize. They all were eagerly expectant, however, when Lieut.-Col. Stoneman, one of the old brigade, was called on. The colonel turned his remarks into a recitation taken from "Songs of a Sourdough." To be definite, he told the vivid story of the "Shooting of Dangerous Dan McGrew," and made the "wild-eyed stranger" who pounds the piano, and the "lady that's known as Lou" do their parts in a manner worthy of an Irving. As a response to a more than hearty encore he gave the familiar and inimitable "How Bill Adams Won the Battle of Waterloo."

Then came the necessary toast to "The

E. FIELDING.

Press," proposed by George West, who spoke in an appreciative way of the merits of this influential factor in society.

J. S. Willison, of the News, was there to respond, and he did it jovially and characteristically. But he didn't stick to his text, either, and wandered off into a story of how he began to learn salesmanship as a book agent, and after "falling down" very abruptly, left the business of canvassing for something more congenial. Mr. Willison has a good opinion of the travelers. "I suppose they represent a higher average of intelligence than any other group of men in the country," he said, "and they're just enough mellowed to make 'em fit for companionship." It was pretty risky to tell a story, he thought, because they knew all that ever were, some that were suitable and some that were not. And everybody laughed. Referring briefly to the Press in a manner that no one could regard as serious, Mr. Willison said that it had its virtues and defects, was sometimes devoted to the interests of the public and sometimes to itself.

W. H. Seyler, manager of The Grocer, spoke on behalf of the Trade Press, which he characterized as the organ of business, and, therefore, a supporter and aid to the traveler. As an old traveler he appreciated the joys and sorrows, principally joys, he said, of the traveler's life, and knew what it meant to be "up against it."

Robert Algie, the father of the "snack," who, as he said, had been "gathered in off the street" that evening, was called on and made a telling speech, reviewing the points of the previous addresses, and emphasizing particularly the fact that travelers should think, act and vote for themselves. In response to a request he gave a selection, also from the popular "Sourdough Songs," "The Cremation of Dan McGee," a humorous tale of the north, in a manner which was thoroughly appreciated.

Then followed a couple of musical numbers, after which John Charles, with his face even rounder and rosier than usual, and with good humor radiating from every pore, jumped up to propose that always last and inevitable toast, "The Ladies." Why they chose Billy Colville to reply to this The Grocer couldn't guess. In spite of the fact that indications pointed strongly to a probability that he would be leaving Canadian civilization shortly for an extended trip around the world, Billy got up and after gulping down a good deal of water, spoke of the great advantages of married life, the indispensability of the ladies, and, as a grand finale, handed out a lot of good advice to those already married and to those contemplating the happy state.

This, with a vote of thanks to the speakers and entertainers, and cheers for the Association, brought to an end a late end, by the way, one of the finest dinners the members of the Commercial Travelers' Association have ever enjoyed.

Through the Smoke.

You just ought to have heard those travelers sing. The way they caught on the chorus of the Maple Leaf and two or three of the popular songs made you think of angelic choirs—or something else.

Did you ever notice how many stout travelers there are? It was quite evident at the dinner. And the fatter they get the jollier they seem to be. Look at Billy Anderson and John Charles, for instance.

Billy Colville didn't look a bit as if he wanted to leave his wife and family to go round the world, when he was replying to the toast to the ladies.

John Charles noted that they always put the ladies and the press together. We wonder why?

Songs of a Sourdough was pretty well advertised by the two recitations from its pages. But they were good human stuff, and took well.

Isn't it funny that these travelers who can talk like a streak by the hour when they are selling sugar or dress goods always get cold feet when they try to make a speech?

"And I can well remember my first sale," said Edward Gurney, when speaking of his apprenticeship as a traveler. "We all do," came back in a chorus that rather surprised him. We wonder what Mr. Gurney really did do on that first trip to New York.

Jack Wildfong, whose broad shoulders carried the responsibility of the chairmanship of the general committee, and who was also chairman of the entertainment committee, was here, there and everywhere, applying oil to make the function go smoothly. He deserves a good deal of credit for the success of this year's dinner. Mr. Wildfong wears even a wider smile than usual when he thinks how well things went.

TRAVELERS' ANNUAL MEETING.

The thirty-fifth annual meeting of the Canadian Travelers' Association was

R. M. STUART, HAMILTON.

held in St. George's Hall, Toronto, on Friday afternoon last, and was one of the best attended and most enthusiastic meetings in the history of the organization.

The financial statement as presented was most satisfactory, showing a reserve fund of $576,489, the largest in the association's history. Last year's death claims numbered 72 and $45,812 was paid to beneficiaries. The membership of the association has now reached 8,531.

Several matters of particular interest to the traveling fraternity were discussed. Regarding the matter of accommodation in local option districts a resolution was passed to the effect that the board ask the government to add to the local option by-law a clause which will provide for the ample accommodation of both man and beast and if not that the by-law be declared null and void. The resolution also asked that an inspector be appointed to see that such accommodation is provided.

Reference was also made to the growth of the Northwest Commercial Travelers' Association, and it was held by several speakers that unless better care was taken of that part of Canada the association had better withdraw.

The president's address referred to the questions of fixing Thanksgiving Day and dates of general elections on Monday or days convenient to travelers and these were heartily endorsed and will be acted upon.

The election of officers resulted as follows: President, Lewis A. Howard, Toronto, re-elected; vice-presidents John Gibson and Robert Gemmell; treasurer, E. Fielding; Toronto directorate, Messrs. S. M. Sterling, J. H. Wildfong, Geo. W. Moore, James G. King, W. J. Nicks, James H. Lumbers, C. J. Tuthill, Harry Ellis and A. C. Rogers; Hamilton vice-presidents, John H. Herring and Robert M. Stuart; directors, Messrs. Arthur F. Hatch, W. H. Dean, E. O. Zimmerman, George McGregor, John Stoneman and P. A. Somerville; Montreal board, vice-president, S. O. Shorey; director, William Cauldwell. Auditors, W. H. Cross and H. Barber.

W. H. DEAN, HAMILTON.

ARRANGED FOR "SNACK."

Drummers' Annual Outing in Alton to be Held on July 24th and 25th.

An enthusiastic meeting of the "Snack" Club was held in the King Edward hotel, Toronto, on Saturday, to discuss ways and means for the drummers' annual summer frolic at Alton. Mike Malone occupied the chair, and Vice-president Cecil Hunt made himself evident, as did also Bob Asher, the Toronto secretary. The following worthy upholders of the Snack were present:— From Hamilton, Bay Hill, Geo. Smye, Pete Smith, Court Thompson, Col. Stoneman and Neil Tufford; from Alton, Robt. Algie and Amos Mason, and from Toronto, Bob Keyes, Billy Colville, Geo. Campbell, Billy Meen, Jack Wildfong, John Charles and others.

The date for the outing was set for the last Friday and Saturday in July.

The financial report proved exceedingly satisfactory, there being over $100 to the good above last year's expenses.

Several committees were appointed to carry forward arrangements for this summer's frolic. One is to consider the matter of issuing souvenir programmes similar to last year. The Toronto side of the concert programme was left in the hands of "Brother" Donald McGregor. The Hamilton end is again left in the dark, but it is known that this always turns out most satisfactory. Billy Colville was made chairman of a games committee, and others appointed to prize, printing and publicity committees. Bob Asher and John Charles will look after the matter of badges.

The next meeting will be held in Hamilton early in May.

TRAVELERS' CONFERENCE.

The annual meeting of the sales department of Lewis Bros., Montreal, was held at the head office, Bleury street, on Thursday, Friday and Saturday, Dec. 26, 27 and 28. This year an innovation was made, and several manufacturers were represented by their head salesmen, who demonstrated how their goods were manufactured. The ice cream made on the premises in the "Iceland Peerless Freezer" was acknowledged to be most delicious. The visitors inspected the order department, where, under the conductorship of one of the directors, C. F. Smallpiece, they were shown the manner in which orders were shipped the same day as received, and also how the different floor managers kept track of their stock. Friday evening was devoted to the theatres.

On Saturday afternoon the annual meeting was held, presided over by J. G. Lewis, vice-president and general manager. Addresses were made by the chairman, C. M. Strange, sales manager; C. F. Smallpiece, and J. T. Smith, secretary-treasurer, and each salesman in turn gave some valuable pointers. Letters on salesmanship were read from John Hall, sales manager of the Simmons Hardware Co., St. Louis, Mo., and also letters from some former travelers, J. R. McMillan, of McMillan Bros., Guelph; W. O. LaBelle, of the Kingan Hardware Co., Peterboro; B. S. Leak, of Mackie Bros., North Bay, Ont.; N. J. Dinnen, of Winnipeg, and Norman A. Wylie, of the Kemp Mfg. Co., Toronto.

In the evening the annual banquet was held at the Engineers' Club, Beaver Hall Square, where the salesmen were guests during their stay in the city. C. M. Strange presided, and was supported by C. F. Smallpiece, J. T. Smith, H. H. Clark, of Lennoxville, who travels in the eastern townships, and was vice-chairman; J. A. Demers, of Quebec, the veteran salesman, and W. R. Tait, of Toronto, manager. Other members of the sales department present were John R. Anderson, J. A. Bureau, A. O. Campbell, H. B. Carbray, J. Craig, C. Doddridge, G. W. Dunn, G. N. Gray, J. A. Rochette, A. Rochette, H. R. Jicketts, B. Saunders, H. H. Valliere, J. C. Watson, A. H. Hart, E. Turbayne, G. C. Young, L. J. LeClair, C. L. Devitt, J. A. Jackson and E. N. Cote. The different heads of the departments were included among the guests: Geo. E. Chaffee, of the Advertising department; E. B. Ryan, of the invoice department; H. V. Armstrong, fo the claims department; J. A. Jackson, of the sample department; H. J. Stafford, of the travelers' order department; E. Bouret, of the letter order department; D. Deschamps, of the heavy goods department; E. R. Spragge, of the purchasing department, and O. B. Hixon, cutlery department. C. J. Walter, of the purchasing department, was unable to be present, owing to illness. The usual toasts of the King, Lewis Bros. and heads of the various departments were proposed and drunk with enthusiasm.

C. M. STRANGE

Sales Manager of Lewis Bros., Montreal

SPORTING GOODS IN CHINA.

In China, as in all countries in the Far East, Euorpeans generally go in for some kind of sport. The men all shoot, play golf and tennis, or some other outdoor game. This practise is responsible for a large demand for all kinds of sporting goods. Up to the present time the majority of these goods came from Europe, but Canadian firms could secure some of the business by going after it.

* * *

A new method of cutting steel is said to have been patented by a Belgian engineer. The process consists in first heating the metal by means of an oxy-hydrogen flame and then cutting it by a small stream of oxygen gas, which unites with the steel and forms a fusible oxide, which flows freely from the cut. It is said that the cut is fully as smooth as that made by the saw, and is only 1-100 inch wide.

HARDWARE TRADE GOSSIP

Ontario.

J. H. Ashdown, Mayor of Winnipeg, spent New Year's in Toronto.

T. J. Norton, hardware merchant, Ingersoll, has been elected school trustee by acclamation.

J. Hepner, of Stevens & Hepner, brush manufacturers, Port Elgin, spent New Year's in Toronto.

Ald. Marsh, Belleville, foundryman, will be a candidate for Mayor in the municipal contest at that city.

Harry Munderloh, of the Munderloh Electric Company, Montreal, was a visitor in Toronto during the week.

Peter Shields, Kincardine, hardware merchant, is a candidate for the fire and water commission at that place.

C. E. Britton, of Cowan & Britton, hardware manufacturers, Gananoque, has been elected reeve by acclamation.

Harry Southcott, of the firm of Coy Bros. & Southcott, St. Catharines, is a candidate for aldermanic honors at that place.

C. W. Hartman, of Hartman Bros., hardware merchants, Midland, is a candidate for the municipal Council of that place.

J. B. Martyn, hardware merchant, Bowmanville, is a candidate for the Council of Bowmanville at the municipal elections.

G. W. Dunn, North Shore representative of Lewis Bros., Montreal, has left for his territory after a visit at Toronto and Montreal.

W. R. Tait, Toronto manager for Lewis Bros., Montreal, has returned from Montreal where he attended the annual meeting of the firm.

The hardware store of W. J. Moore, Richard's Landing, was damaged by a fire which wiped out the business section of the village on Dec. 29.

J. Walton Peart, St. Mary's, second vice-president of the Ontario Retail Hardware Man's Association, is a candidate for alderman of that town.

I. L. Cooke, Coboconk, writes that he has not sold his hardware business at Fenelon Falls. His brother, R. J. Cooke, is conducting the business at Coboconk.

The workshop of Murray Bros., plumbers, Vancouver, was partially destroyed by fire last week. A large stock of enamel and earthenware was destroyed.

K. C. G. Dreyer, recently with McCauley & Co., Chatham, has accepted a position with H. H. Otton & Co., Barrie, calling at the Toronto office of Hardware and Metal on Tuesday on his way to his new location. Mr. Drever is one of the most enterprising hardware salesmen in Ontario and we expect to hear from him in the window-dressing line in future.

George Robinson, hardware merchant, Weston, while driving home from Toronto this week was held up by two men armed with revolvers. The highwaymen were frightened off on the approach of the suburban car, without getting any valuables.

An assignment of the Toronto and Belleville Rolling Mills, Belleville took place this week. A meeting of creditors has been called for Jan. 7. It is believed the mills will be re-opened in the near future.

Thomas Hodson, of the Dominion Wire Mfg. Co.; William Linton, of the Standard Ideal Mfg. Co., and O. M. Hodson, of the H. R. Ives Co., Toronto, were nominated to run for councillors at the municipal nominations at East Toronto.

W. G. Scott, hardware merchant, Mount Forest, and president of Ontario Retail Hardware Association, has been re-elected light and water commissioner by acclamation, and has also been tendered a complimentary nomination for mayor.

Fred. G. McBrien, the 21-year-old hardware dealer, who contested for an aldermanic position in the Toronto municipal elections, came within four hundred votes of election, polling well over 1,000 votes, and standing fifth in a field of thirteen.

The Champion Rivet Company, a Cleveland concern, has decided to establish a branch in Canada, and Windsor has been highly favored for a location. It is authoritatively stated that the choice lies between Windsor and Port Hope, Ont. The company will employ about 500 hands.

Quebec.

Thomas Forest, Montreal, has been appointed a plumber.

Mr. Chaplin, of the Welland Vale Manufacturing Company, St. Catharines, has been in Montreal.

L. Stewart, of the Dana Manufacturing Company, Cincinnati, has been visiting the Montreal hardware trade.

The firm name of Auger & Letourneau, hardware merchants, Victorville, Que., has been revised to read Letourneau & Auger.

Geo. F. Barr, representing the Metal Stamping Company, and the Novelty Manufacturing Company, both of Jackson, Mich., U.S.A., has been visiting Montreal.

Morency & Cote's hardware store, 204 East St., Montreal, was damaged to the extent of $500 yesterday by a fire which is thought to have been of spontaneous combustion origin.

W. H. Wiggs, of the Mechanics' Supply Co., Quebec, has returned from Washington, D.C., where he attended the 36th annual convention of the Y.M.C.A. Mr. Wiggs is president of the Ontario and Quebec institutions of the Y.M.C.A.

Fire broke out in the hardware and paint establishment of Morency & Cote, East St. Catherines, Montreal, and did damage, roughly estimated at $500. The blaze originated in the rear of the store, and owing to the inflammable nature of the goods, spread rapidly. The nremen, however, were soon able to subdue the flames.

Western Canada.

McFarlane & Northcott, Calgary, hardware merchants, have dissolved.

Hick & Wakeley, Lethbridge, Alta., tinsmith and steamfitters, have dissolved partnership.

Great Britain.

The products of Spear & Jackson, Sheffield have recently received further recognition, their saws and artisans' tools having been awarded a gold medal at the exhibition which has just taken place at Christchurch, New Zealand.

PROVINCIAL SECRETARY REPLIES

The Provincial Secretary has replied to the resolution of the Western Ontario Commercial Travelers' Association respecting hotels in local option towns. Mr. Hanna points out that the matter of compelling such hotels to preserve a certain standard would be difficult for the Government to undertake, but promised that the resolution would in the near future be brought under careful consideration.

RANGE OFFERED AS PRIZE

Tisdale & Cameron, Midland, started a nine-day sale of tin and graniteware on December 5. To encourage trade the firm have offered as a prize a $40 steel range, which will go to the customer holding the ticket containing the lucky number. A ticket is given with each article having a value of 50 cents.

SIMPLE FORGE WORK.

The third edition of "Simple Forge Work," published by L. Upcott Gill, London, Eng., has lately appeared. The new book is well edited, and is filled with carefully prepared illustrations, which set forth the way in which many metal instruments may be manufactured with the aid of few tools. The book is invaluable to young smiths and contains many model plans for doing new work.

METAL TRADE ITEMS.

That the Nova Scotia Steel Co. and the Dominion Iron and Steel Co. have over 500,000,000 tons of iron ore in their areas at Bell Island, Newfoundland, has just been ascertained by boring operations which have been under work for some time. Besides their areas on the island, both companies own submarine areas, extending two miles into Placentia Bay, and experiments recently concluded show that this area contains ore of even better quality than that which has been mined on Bell Island proper for the last seven years.

The Atikokan Iron Co., Port Arthur, closed down the blast furnace last week on account of the high rate charged by the railroads to market their pig iron. Important alterations to the plant will be made before navigation reopens.

PUBLISHED EVERY SATURDAY.

ANOTHER YEAR OPENS.

The publishers of Hardware and Metal extend the compliments of the season to its readers with the wish that all may enjoy a prosperous 1908.

With all the newspaper talk of dull times, many have adopted the belief that disaster is in store for the trade during the coming year. Caution and retrenchment are undoubtedly necessary, but reports received by us from manufacturers and jobbers in all parts of Canada indicate that the daily newspapers have decidedly overdone this talk of business setback. These reports will be published next week, and, in the meantime, we urge our readers to continue to pass along the thought that 1908 is going to be a much better year than is generally expected.

* * *

During 1908, Hardware and Metal will, if the plans of the publishers are successfully carried out, be made of increased value to readers of the paper. The staff holds a weekly conference talking over all matters pertaining to the paper, and laying plans for improvement of any parts not considered thoroughly up-to-date. If readers will look back over their files and compare the paper of to-day with that of a year ago, many changes for the good will be noted. Just so does the staff expect to carry into effect many improvements during 1908.

Retailers can help in making the paper more valuable to themselves by making advertisers realize that their advertisements are read regularly. Incidents are constantly occurring showing the value of the advertising pages, but too often readers neglect to mention the paper when giving an order placed as a result of reading an advertisement. A case which recently came to the editor's notice is as follows:

Lewis Bros., Montreal, published an advertisement of Albany hardware, a line which had been pushed with considerable success by their selling staff. The Toronto manager, W. R. Tait, had endeavored to interest Fred. G. McBrien, Bloor street west, in the line, but was not given a chance to explain the merits of the line. Mr. McBrien, as usual, took Hardware and Metal home on Saturday night to read on Sunday. He read the ads., was interested in the Albany announcement, and on Monday telephoned Mr. Tait to come up and show the goods, placing an order for them.

Doubtless many such cases occur which are never heard of. Little incidents such as these, however, are important, not only to the publishers, but to advertisers. Advertisers do not look for direct results from trade newspapers, but they like to know that their announcements are effective.

* * *

With the continued support of our advertisers and readers, the publishers aim to steadily enlarge the staff of editorial writers, including specialists, in many fields not now receiving the attention we would like to give them. With writers devoting special attention to market reports, tariff legislation, trade organization, business management, bookkeeping, window trimming, effective advertising, tinshop patterns, heating problem, etc., readers of the paper can gain valuable information such as it is impossible for them to secure without great effort in any other way.

We are often told by subscribers that they read the paper from cover to cover every week, and there is no better New Year's resolution we could suggest than that each reader select a stated time each week, and resolve, in the interests of his business, that this time be devoted to reading the paper and laying plans for a definite programme to be followed during the week. Plan when the store advertising is to be written, when the window is to be trimmed, etc., gathering ideas from the doings of others described in Hardware and Metal.

Again we wish the trade a Prosperous New Year.

WHERE DO YOU STAND?

This is a question for every merchant to face at the begining of a year's business: Do you know where you stand financially? Have you any definite statement as to just how much stock you have packed away in the back cellar and in the second storey of the warehouse? Do you know how much this stuff is really worth?

Here is one point where a great many dealers go wrong and get into further trouble. They neglect to take stock. A merchant ought to know at least once a year, and better, every month or every week, just where he stands. Hundreds of the assignments which occur could be avoided if this matter were attended to. Find out what goods you really have on hand and clear it out before you let the travelers load you up with new stock.

And now is the best time of the year to do this work, in January, the slack winter month after the holiday rush is over. The matter is one which cannot be too strongly emphasized.

TORONTO'S NEW MAYOR.

Business men generally will greet with satisfaction the election to the Mayoralty of Toronto of Joseph Oliver, a lumber merchant, who has for many years been a prominent worker and official in Commercial Travelers' Association work. The salesmen supported Mr. Oliver to a man, and deserve much credit for the election.

Miles Vokes' defeat with only about 1,000 out of the 32,000 votes cast, did not occasion much surprise, except for the small number of votes obtained, only about one-quarter the number given the Socialist candidate. The campaign developed into a "anything to beat Nesbitt" fight, Nesbitt being a typical political boss and not considered a safe man for the chief magistracy. Vokes and Geary both lost thousands of votes given to Oliver to ensure Nesbitt's defeat. Mr. Vokes had an excellent opportunity a year ago, but stood aside to give Mayor Coatsworth a second term.

Although Toronto has not a hardware merchant as Mayor, the city has a successful business man at the helm, with a fair representation of retail merchants at the Council Board.

The elections in other municipalities throughout Ontario take place next Monday, and hardwaremen will do well to see that their councils, likewise, contain a fair representation of merchants in order that the interests of the commercial section will not be neglected.

CONDITIONS IN THE WEST.

By our Special Winnipeg Correspondent.

The last three days of the Christmas trade proved fully up to expectations and though, of course, there is a profound lull this week there is a general air of cheerfulness, and stocks are being gone over in anticipation of the usual January sales. Staffs in a number of the department stores are being reduced and in this respect things are being cut more finely than they have been for some years, and that is at the present practically the only indication of hard times, so far as the retail trade is concerned.

The lessening of staffs, however, is not confined to the retail trade, but is quite general throughout the city.

All the large western mills, except the Ogilvies, have closed for a period, the Lake of the Woods Milling Co., at Keewatin, having closed for a week. It is expected, however, that they will reopen very early in the New Year.

The wheat market has been remarkably steady all week, in fact, it is about the steadiest and strongest holiday market that anyone on 'Change can remember. The feature of the market is the excellent cash demand for all grades of wheat, but more particularly for low grades. Receipts for the week have been very good, though not as large as for the preceding week, although the movement continues good.

The weather was very mild up to the day before Christmas, but when the west got up Christmas morning it found a drop in temperature that was more in keeping with the season. The day after Christmas was very mild again, but since that day it has been sharply cold, with the clear blue sky and gorgeous sunshine so familiar to the old-timers. The winter is well on its way and the drop in wood prices is a pretty good guarantee that there is no danger of a fuel famine, so far as the city is concerned at any rate.

The "Forward Winnipeg" movement is receiving a great impetus just now. There was a meeting called in the Walker theatre for Friday evening, 27th inst., to listen to addresses about what Winnipeg could and should do and to look at pictures of what Winnipeg had done. The meeting was a very notable gathering. The theatre was packed to the "gods" with a splendidly representative audience of men and women, the speakers were well chosen, the addresses short and pithy and the spirit of the whole meeting excellent. If any one down east is feeling blue about the west it is a great pity that they could not have attended that meeting, it certainly would have proved an inspiration. One thing is sure, whoever is feeling blue about Winnipeg, that city is not feeling that way itself, and in passing it might be remarked, she is on the spot and in an excellent position to know how things really are. The definite object of this meeting was to form a community club, which, as a matter of fact, has already been formed and has something over 2,000 members, men and women pledged to promote the advancement of the city in every way possible, to believe in it, and to help others to do the same. The little pause that has come with the present financial stringency has given the westerners time to get a second wind, count their mercies and their opportunities and go ahead. Perhaps the most sane and forceful statement made at this great meeting fell from the lips of John W. Dafoe, editor-in-chief of the Manitoba Free Press, who had been asked to speak on "The Best Type of Citizen." Mr. Dafoe said: "The best type of citizen to-day is the man who is as far removed on the one hand from recklessness as he is on the other from cowardice. The conditions that have alarmed the timid are only in a very slight degree attributable to local causes, and while the present may be a period of anxiety, there never was a time when the future of the west and therefore the future of Winnipeg, was more assured than it is to-day." In giving voice to these sentiments on the platform Mr. Dafoe was but giving sound to the written policy of the great paper over which he presides. This has been to tell the truth without fear and without apology and to re-affirm continually that in spite of any temporary drawbacks the west is all right.

Before this reaches readers of the column it will be 1908, but not too late to wish everyone, east and west, a very Happy New Year.—H.

METAL MOVEMENTS IN 1907.

The retrospect of the metal markets, which we publish in this issue, shows how severe has been the buffeting which the various markets have sustained. A prosperous course seemed indubitably mapped out at one time for the different industries. Prices were high, for instance, copper was 27 and tin 47 cents, and so confident were the experts that the limit had not been reached, that an augmentation of these figures was expected. Supply had not overlapped the demand, and the markets were keyed up to full tension.

But prosperity, unfortunately, often over-laps itself. This fact was never better exemplified than in the case of copper—and the great crash of this metal struck the heaviest weakening blow to the markets generally. At the commencement of the year, with mills going at full pressure, copper was hard to obtain, and the demand apparently showed no signs of falling off, but the tension was too strong too last. The market for finished articles became glutted, the high prices ruling checked further stimulation, the demand began to break, and then came the beginning of the end.

Prosperity, unless steadied by checkrun be hoisted with its own petard. ing influences must always in the long This has been repeated over and over again in the history of the various markets, not only in metals, but in the other products of the earth. It is the drastic cure that the law of average gives us. Every cycle of years sees such a rise and fall, and the commerce of the world is always better afterwards. Prosperity must be pruned of its inflation as the branches of an overgrown tree are struck off to give the root renewed energy.

Speculative agencies, apparently, played the greatest part in bringing the English markets to the perilous state it presented in the closing months of the year. Apart from iron there has been no steadiness in metals in the Old Country. The history of tin, for instance, closely approximates that of copper, excepting in the nature of the cause producing the crash, the one due to speculation, the other to over-production. But the toboggan-like character of the fall was the same. Situated as Canada was between the devil and the deep sea, between the Old Country markets on the one side, and those of the States on the other, there was no halfway course for the home markets. They had to slide with the rest, and the breakneck character of the slide can be seen from a comparison of the figures obtaining at the beginning of January and at the end of December.

The malleable casting industry has had a greater proportionate growth in the last 12 months, according to the Foundry, than any other branch of the foundry trade. Many extensions have been made to existing plants, and the number of new works erected in this period establishes a new high record. Although the bulk of the new tonnage will be consumed by the railroads and makers of agricultural implements, a large portion will consist of pipe fittings.

Markets and Correspondence

(For detailed prices see Current Market Quotations, page 74.)

MONTREAL HARDWARE MARKETS.

Montreal, Jan. 3.—Despite the financial cloud under which trading has been conducted during the latter part of the year, the hardware industry finished well up to the average. In fact, January started so promisingly that it looked as if the banner year of 1906 would be beaten. Prices were still on the upward trend, and business was very good. As the months went on, however, it was perceived that the record would not be beaten. The demand in the West did not reach the point set in the previous year. Land speculation told its inevitable tale. Money was not so free, the closing down of the banks made collections all the more difficult to obtain, dealers were not in so good a position to carry their customers, and the natural needs of the country were thereby checked. The harvest, too, owing to the unfavorable spring weather was against a repetition of the 1906 demand.

Then came the further check of the monetary stringency produced by the financial disasters in the States. That allied hardware industries, considering the money stringency finish up with the vigor that they have done, is an unanswerable rejoinder to those pessimists who saw in the gloomy days of November and December signs of waning prosperity. Prices have held firm all through, and but for collections—which after all have not been so bad as some people have made out, jobbers would have little cause to complain. The unjust customs decision which placed all nickel-plated tools—no matter what the degree of plating—under the 35 per cent. clause, has caused much indignation in the trade. The result of this interpretation was that a relatively higher price had to be placed on the lines affected.

Builders' Hardware and Supplies—These lines have been in especially good demand the whole season, due to the extensive building operations going on all over the country. This year may see a partial check however, as many building propositions have been shelved for a time owing to the financial stringency. An enormous volume of business was also done in cement, but here the producers were handicapped on account of lack of prompt shipment.

Sporting Goods—There has been a good and consistent call all through for the various seasonable lines, and especially was this noticeable in the spring. Prompt delivery was hard to obtain, owing to the very heavy demand. Both at the beginning of the year and at the end there was a shortage in some lines of skates. There has been a run on sleigh bells, but apart from this the movement of the various articles has been devoid of incident. The unseasonable weather of the last few weeks has naturally had a checking tendency.

Screws—From the commencement of the year, supplies have been short, and makers have been woefully left behind by the demand, especially in the small sizes. January and February will have to be utilized to the full in order to replete the stocks. Quotations have continued firm.

Stoves and Ranges—Factories had to work at high pressure to fill the orders which the building boom created for them. Shipments were, in consequence, not so prompt as they might have been.

Bolts and Nuts—Up to late in the fall, when owing to construction work falling off, the demand was affected, 1907 was a very good season for bolts and nuts. There has been considerable difficulty in obtaining supplies, and the makers were only able to catch up to the shortage late in the year. A reduction of 10 per cent. was made in October on the larger size of bolts.

Nails—Nails have been in good healthy demand, and supplies, considering all things, have been satisfactory, especially towards the end of the year.

Bright Wire Goods—A large volume of business was transacted with the Northwest, and manufacturers were uniformly busy towards the close of navigation.

In cutlery and silverware, special spring and fall goods the demand all through has been of a consistent character, and considering the untoward incidents which have affected the markets generally trade altogether has been satisfactory.

TORONTO HARDWARE MARKETS.

Toronto, Jan. 2.—With the advent of the new year business is expected to pick up, the jobbers all seem satisfied with the prospects though as the travelers are just starting out orders are not very brisk yet. The week between Christmas and New Year's is the dullest of the year with the jobbers and the closing week of 1907 proved no exception to the rule. Most local jobbers have finished taking stock and travelers have been holding conferences and arranging for next season's work.

The city trade has been well up to the average and retailers report a satisfactory Christmas, all lines moving freely.

All products of iron and steel remain firm in price and there is small chance of the price dropping for some time, the tendency of many manufactured articles will be to rise as the year advances, though brass goods are expected to drop with the coming of the new year. From all centres come reports that the manufacturers will not produce heavy stocks during the year and it is considered wise for the retailers to lay in their stocks as soon as possible.

The year just closed has been a satisfactory one to the trade in Canada. The manufacturer, jobber and retailer have no complaints to make and though the market at present is considered to be in a fairly normal state we again advise the retailers to book their orders as early as possible.

Nails—Nails remain firm in price, being quoted at $2.55 in single kegs. This product has been slaughtered for a number of years, but with several changes amongst manufacturers early in 1907 the cutting was stopped and prices advanced to the above figure. At present there is little demand for nails of any variety, but some booking is being done for spring delivery and the demand will start in the near future.

Iron Pipe — The demand for the greater part of the last year has been greater than the output, especially for sizes up to one-inch. The price remains firm and as the demand is not marked at present manufacturers are slowly catching up with the requirements. A complete list of prices for sizes up to 4 inches appears on page 66.

Screws—Business has been good all season and there seems little chance of a drop in prices at present. Booking for spring delivery has received a start and the market is fairly well stocked at present though there remains an indication that popular sizes will be scarce again this year. Prices remain firm.

Axes and Saws—From the country districts constant orders for axes and cross-cut saws are coming in freely. Prices remain unchanged.

Steel Traps—The demand for the popular sizes remains fair though orders recently booked are of the sorting variety. There is no change in price.

Bolts and Nuts—The demand for bolts and nuts is at present quiet though the booking for spring delivery is expected to start with the advent of the new year.

Sporting Goods—A fall of snow would help the sporting goods trade to some extent. Sorting orders for skates, sleighs and snow shovels are coming in slowly and the demand for guns, rifles and ammunition continues fair in most localities.

Copper and Brass Goods—The prices on these lines are steady, copper rivets being quoted at 35 per cent.

METAL MARKET RETROSPECT.

Montreal, Jan. 3.—A general glance back over the metal operations of the local markets shows how completely the latter end of the year falsified the hopes that were confidently expressed at the commencement. In February the mar-

ket was strong, and higher prices were expected. All lines had jumped up, and the future looked most rosy. But in March came sensational declines in the foreign markets, due to speculation in tin and copper, and from that point the markets generally never recovered themselves. The 'longshoremen's strike in May also hampered operations here, the congestion at the docks being very heavy. Further market fluctuations in England during August stopped the hope of any immediate return of firmness to the markets. Buying had now fallen off to a very great extent, and when later in the year both the English and the American markets became demoralized, the local one went with them. Buying was practically dead, and there was an utter want of confidence in the future. A strengthening tone has been observable these last few days, and although prices have not yet generally advanced, the immediate prospects seem very favorable to an increase all round. Directly buyers are convinced that the turn of the tide has come, orders will be freely placed for up to now their demand has been of a hand-to-mouth description.

Copper—Copper played the principal part in the metal history of 1907, and its rocket-like career from the blaze of an inflated price to the low splutter of a bottom one has been of far-reaching influence on the markets generally. Here again we have a repetition of the inexorable result attending over-production and a falling off in demand. No combination is sufficiently strong to hold in check the excess in production that an insistent demand creates, or regulate the piling up of stocks when that demand commences to fall off. There can be only one result—a slump, the severity of which is governed by the recuperative power of the market affected.

The copper crash of 1907 presents one unusual feature in comparison with the slump in prices that occur at various times to all metals, and that is in the character of its decline. As a rule the break is a sharp one at the commencement, and then the progression is lessened as the steadying influences of the normal basis of the metal is felt.

In the present case of copper, however, the downward trend was at first slow in movement, but gathered in speed as the weeks went on until the closing end of the year saw a precipitate decline. Last January, copper in the Montreal market was at the high water mark of 27c, and was hard to obtain at that price. The demand in finished articles then commenced to fall off, stocks showed signs of piling up, and buying naturally slackened. In March the first forebodings as to the condition af the market commenced to show themselves. By this time great stocks had been accumulated, and with the current production more than equal to the current consumption, the widening break in the demand was ominous to those who looked ahead. In June and July when the price sank from 24c to 23c there was no doubt as to the general falling off in demand, and copper commenced to weaken much more rapidly.

In August the opinion was hazarded that the metal would have to reach a 20c basis before buying was stimulated, and relying on that, producers kept at full pressure. But unfortunately the 20c stage did not bring the rally in demand, and the bottom of the market broke. Towards the end of September a 15c basis was reached in the States, the price here being 18c. By this time a heavy curtailment had taken place, and it was hoped that this low price would stay the rot. But it was not to be. Buyers still held off, and in October, with the great financial panic in New York, followed by a general trade depression, the 15c basis gave way. A sharp decline in the English market added to the weakness, and with prices sinking lower and lower in the States, the local price went in fluctuating stages, to 14½c in the closing days of the year. This last week, however, has seen a strengthening effect in the markets generally, and this has induced a stronger tone here. Realizing the fact that the demand will be heavy when confidence is returned, it is expected that the market from now onward will firmly strengthen in tone.

Ingot Tin—Ingot tin played a very good second in the hammering it sustained since the commencement of the year. Starting firm at 46½c to 47c, it slowly declined in sympathy with fluctuations in the primary markets of supply—fluctuations which were due to speculation—until in September it reached 41. In October, owing to free selling by the Chinese, there was an ominous decline in the English market—prices going down in one week £8. This naturally had a disastrous effect on the local market, and prices fell away. A restriction in consumption, and the money stringency helped forward the general debacle, and drooping under the depressed condition of the metal market, tin, despite a rally in England, continued to fall locally. A reaction in the Old Country disappointed hopes of stronger prices, and the market here was $31.50 in the closing days of the year.

Pig Iron—Pig iron has been the one bright spot in the metal market, and prices have held firm all through the year. High grades of Scotch and English iron have been most difficult to procure, and the difference in price between selected and ordinary grades has been abnormal. This maintenance of the high price has kept the tone of the local market up splendidly. The policy pursued by the American producers also helped to sustain the high level of the market. When the financial depression arose, and markets generally were drooping, a concentrated effort was made to restrict the output so as to conform to whatever decline there might be in consumption. Furnaces were blown out in utter disregard to the lowness of stocks, and by this means a firmness was given to prices which otherwise would not have obtained. There has been no great weakness in demand as yet, and if it does come, this conservative policy is the best bulwark that the industry can have. In January Summerlee was quoted at $25, while it is now $25.50, which is a good indication of the firmness characterizing the market. Canadian furnaces have worked at full pressure, and several new ones have been blown in.

Antimony — Antimony has followed the declining path of copper, but the attention which would otherwise have been directed to such a remarkable collapse has been diverted by the meteoric display of the more important metal. At the commencement of the year, antimony was 27½c to 28c, but declining with steady persistency in similar ratio with the English market, it reached the low price of 13c in October. It again stiffened with the stimulated demand induced by the low figure, but fell away again under the reactionary aspects of the primary markets, until at the end of the year it barely held its own at 12c. All the way through operations have been most dull.

Lead—Until lead eased off a few weeks ago in the Old Country, the starting price in January of $5.50 to $5.60 was well maintained. A sharp decline in the primary market had a naturally depressing effect here, and prices were steadily shaded. There was a slight rally towards the end of October, but it did not hold, and in the last two months of the year the market fell locally to $4.25. An improvement in the English market within the last few days has induced a strengthening tone, and imported pig lead is now stronger at $4.50.

Spelter—Spelter has been most colorless throughout the year. Starting strong at $7.25 with a slight advance at the end of the month it fell away, until in July under slow buying, it reached $6.50. In October, although producers were curtailing the output, a cut of 50c took place. Following the course of the other metals, the market in the remaining months weakened another 50c, but held firm at the close of the year. This firmness has been helped by the closing of a number of mills.

Old Metals—The weakness in new metals naturally had a bad effect upon scrap. Starting with prices well maintained, and business good, the buying gradually fell off, and with heavy stocks, holders found themselves in an unfortunate position. Lowering the market prices did not stimulate buying and the market at present is at a very low ebb.

TORONTO METAL MARKETS.

Toronto, Jan. 3.—The year has opened with a brighter outlook than has existed for several weeks. While prices are still fluctuating the belief seems general that there will be advances during the next few weeks following a buying movement resulting from a return of confidence. In fact, metal merchants already report that expected orders are materializing as a result of the increased firmness shown in several of the metals during the past fortnight.

In another column the movements in metals during the past year are reviewed noting the rise and fall of the leading metals during 1907. Copper was in the forefront with 27 cents as an opening figure last January, dropping as low as 13½ cents in Toronto, and closing the year at 14½ cents. Tin, with a drop from 47 to 30 cents, also showed wide movements, the year closing at 31 to 31½ cents. Lead also felt the general decline dropping from 5½ cents to 4 cents, and strengthening again to 4¼ cents. Zinc spelter and sheet zinc moved from 7¼ and 8 cents a year ago to 5¼ and 7 cents at the close of the year. But the greatest movement of all was the drop in antimony from 28 cents to 11 cents during the twelve months just past.

Pig iron alone maintained its strength through the year, there being only a slight shading towards the end of 1907.

The holidays put a quietus on trade during the past week, but with the full year before consumers, with stocks light and prices more satisfactory than for many months, it is reasonable to expect that buying will be brisk during the first couple of months of 1908. Bookings of sheets, etc., for spring delivery cannot be much longer delayed, and once these commence the market is bound to strengthen.

Pig Iron—There has been a shading of prices, amounting to about a shilling in the Old Country. Prices locally remain at $22.50 for Canadian iron and $21 for No. 3 Middlesboro.

Copper—With the exception of a strengthening in outside markets there is nothing to report. Business has been dull, owing to the holidays. We quote: 14½ cents for casting ingots.

Ingot Tin—While there have been several fluctuations the net result has been an advance and the market begins the year with an upward tendency. The Chinese speculators are understood to have unloaded their English holdings and to be rapidly decreasing their Eastern stocks. We are locally quoting 31½ cents.

Lead—Like tin there have been fluctuations in lead in the foreign markets during the week. The price, however, remains the same at 4¼ cents per pound.

Antimony continues weak at 11 cents.

Spelter and Sheet Zinc are featureless and unchanged in price.

Old Materials—The market is dull, with nothing to report.

LONDON, ENG., METAL MARKETS.

London, Dec. 31.—Cleveland warrants are quoted at 48s 3d, making prices as compared with last week 1s 7½d lower.

Tin—Spot tin opened firm at £123 10s, futures at £124 10s, and after sales of 100 tons of spot and 400 tons of futures, closed firm at £123 10s for spot and £124 10s for futures, making price as compared with last week £2 15s higher on spot, and £2 10s higher on futures.

Copper—Spot copper opened firm at £62, futures at £62 15s, and after sales of 300 tons of spot and 400 tons of futures, closed firm at £62 for spot and £62 15s for futures, making price as compared with last week £1 10s higher on spot, and £1 higher on futures.

Lead—The market closed at £14, making price as compared with last week 10s lower.

Spelter—The market closed at £19 10s, making price as compared with last week 5s lower.

U. S. METAL MARKETS.

Cleveland, O., Jan. 2.—The Iron Trade Review says: A series of conferences of tin plate manufacturers participated in by the leading interest and independents, have been held within a few days to devise means of maintaining prices throughout the first quarter of the year. Pig iron and other interests are also conferring. While nothing definite has yet been announced, it is believed that a better understanding of conditions and of policies necessary to hasten a return of prosperity will be obtained.

Although developments at the close of the old year were not as positive as might have been hoped for, there were enough favorable indications to justify a cheerful feeling.

Continued increase of interest in the pig iron market is reported and some sales are being made. In the Chicago and Cincinnati market there is a firmer tone, with promise of fair orders, although heavy buying is not expected. Southern furnace men are acting with more harmony than for some time. Occasionally a selling interest manifests a disposition to be aggressive and to obtain business at concessions, but, as a rule, prices are being well maintained. A few more stacks have been blown out, and others are expected to be added to the idle list this week. The outlook is that the price of Bessemer pig iron for the first quarter will be about $19 valley.

U. S. IRON AND METAL TRADES.

New York, Dec. 31, 1907.—The Iron Age says: The report has been given considerable currency that there would become effective on January 1 a lower range of prices on structural material, plates, tubes, sheets and tin plate. The plans of the makers, as developed thus far, do not justify the expectation of an immediate readjustment of prices, although some change in sheets and tin plate may be made toward the middle of the coming month.

Pittsburgh seems to have become the headquarters of a group of publicity managers, who are attempting to force "restoration of confidence" by sending out elaborate accounts of a widespread resumption of industrial activity. Unfortunately many of these reports are either untrue or misleading. The number of plants active during the holidays was very small, and naturally a considerable percentage of the idle ones will start up, in some cases because they have accumulated orders, but such resumption will not restore the industry there or elsewhere to anything like its normal rate of productiveness. Any exaggerated statements as to the near future now will only create the greater disappointment later on, when the truth is realized. The work now in sight justifies operations to the extent of close to 50 per cent. of the capacity.

The pig iron committee is in session at the present writing, all the leading interests being represented. During the past week inquiries have improved in all the principal distributing markets, but very little new tonnage has been booked, and in some quarters a weakening tendency has developed. Other makers, however, are holding aloof and are not meeting the lowest prices named, this being notably the case with some southern producers, who decline to go below $13.50, Birmingham, for No. 2.

No new rail orders have been placed, and outside of two or three moderate lots, one of them for Cuba, no tangible business is in sight at the present moment. Some business in structural material has been placed in Chicago and several good sized lots are in sight in New York. Moderate orders have been booked for plates, and it is expected that some shipbuilding work will come out on the Delaware.

In the cast iron pipe trade we note the placing of one 4,000-ton contract in New York, and there is the prospect of some heavy work for Boston.

There have been no new developments in the markets for old material throughout the country, which remains in a very unsatisfactory condition from the standpoint of the sellers.

There is a little better feeling in the copper trade and electrolytic has sold up to 13.50c. Lead, too, has hardened to 3.75c., New York, with quite a good volume of business done during the past few days.

RAW FUR MARKET.

There is no quotable change in the raw fur market this week. Soft weather has resulted in a great falling off in trade and few skins are coming forward.

OUR CHRISTMAS COMPETITIONS.

Hardwaremen throughout Canada appear to have taken a great deal of interest in the Christmas window dressing and advertising competitions, which have been talked about in these columns for several weeks. Photographs and sample advertisements have been arriving with more or less regularity for a couple of weeks, but early this week every mail brought large numbers of entries for both competitions, and the matter of judging promises to be no small item.

With the unusual rush incidental to the holiday season it has been found impossible to acknowledge the receipt of each of these entries, but every care has been taken to check each arrival and full justice will be given in every instance. In two or three cases photographs and letters regarding same have not made connection, but every effort is being made to trace these, and it is hoped that they can be straightened out.

In the Window Dressing contest the entries have been chiefly from the smaller towns, showing the popularity with which the idea of dividing the prizes was received. In the Advertisement contest, as was to be expected, the majority of entries were received from city dealers.

The work of judging will be proceeded with at once and the successful contestants will be announced, along with reproductions of the prize-winning windows and advertisements, just as soon as the matter can be satisfactorily arranged.

The steel girders of the new C.P.R. depot are being put up, and the handsome building is beginning to give one an idea of what it will be.

Quebec and Maritime Provinces

Encouraging Outlook for 1908 Trade—Steady Movement Towards the Cash System in Business in Prince Edward Island—High Freight Rates —Opening for Stove Foundry.

HALIFAX.

Halifax, N.S., Dec. 30.—The hardware trade in Halifax during the year just drawing to a close has been most satisfactory. Notwithstanding the advanced prices in most lines, business in the Province of Nova Scotia was good all year, and the effect of the financial depression elsewhere has not been felt here. There have been no failures of any note, and all the large industries appear to be quite busy.

* * *

While the mills and factories across the border have been closing down and running on short time, the various industries in this province have been running on full time, and many of them still have orders on hand to carry them well through the opening months of the coming year.

* * *

Money here was circulated freely during the holiday season, many of the largest business houses reporting that the Christmas trade was never better. On some lines, such as skates, there was very little doing, owing to the mild and unseasonable weather, but the retail hardware firms carrying other lines besides hardware, found the business the best in years. In an interview, A. B. Wiswell, of the hardware firm of A. M. Bell & Co., said: "With us the holiday trade was as good, if not better, than last year, and 1906 the business was very large. I think that is the general experience of the trade." The dull season has now set in in the hardware business, and it will be some weeks before the spring business opens up, but, in the meantime, the various firms have started stock taking.

* * *

Prices throughout the list are very steady and there is no indication of any immediate change. The prices for window glass have not yet been fixed, but it is generally understood that there will be little change from the present quotations. The opinion prevails that sheet zinc and sheet lead will be somewhat lower for the spring trade, and there is a probability that white lead will be a little easier.

* * *

The Sydney Cement Company have decided to add still another article to their growing list of products, and they intend very shortly enlarging their plant so as to enable them to manufacture a quantity of bricks per day from the slag they receive from the Steel Company. Slag bricks are not by any means a raw product. They have been successfully manufactured for several years in England, and are being utilized to great advantage. The bricks are of a high grade and can be made at a very low cost. They are adapted for a number of purposes, including street paving, etc. The cement company upon deciding to enter the field of brick making, obtained from British firms designs and estimates. These will be used in preparing the plant for the increased operations, and construction work will begin very shortly. It is also believed that lime burning could be done with advantage to the building trades, as well as to the Cement Company. Up-to-date designs of kilns are being studied with a view to ascertaining the best that can be done in this line, and it is predicted that ere long this additional industry may become a department in the Cement Company's works.

* * *

The richness of the gold ore of Nova Scotia was attested by a report made to the Mines Department last week by J. B. Foster, who brought in from the Oldham mines 155 ounces of gold, the result of ten days work. This yield was from thirty tons of quartz, which was mined at a depth of 1,200 feet. The lead, which yielded about two ounces to the ton, when uncovered, is now yielding more than five ounces at the depth of 1,200 feet.

NEWCASTLE, N. B.

Newcastle, Dec. 28.—All the local hardware dealers report substantial increase of business this month over that of last December.

* * *

The International Paper Co. has purchased 550 square miles of spruce land in Restigouche county. They already own vast areas near here.

* * *

Chas. E. Oak, of the Miramichi Lumber Co., a concern identical with the International Paper Co., says that if Canada puts an export duty on pulpwood the U.S.A. will retaliate on anthracite. But the feeling in this Province favors the duty.

* * *

The lumber output this season will be curtailed nearly one-half.

* * *

The two shingle mills at Charlo, Restigouche county, owned by William Curry, M.P.P., were burned on Dec. 24, together with some lumber. Loss $3,000, and very little insurance.

* * *

The Sackville Paper Box Company has been organized at Sackville. A. B. Copp, M.P.P.; Dr. J. H. Stead; S. W. Copp; T. R. Anderson, and C. C. Avard, are directors. Mr. Avard is secretary, and A. W. Davis, of St. John, foreman. The company have purchased the building lately occupied as a carriage factory by Blair Taylor.

* * *

The will of the late Charles Fawcett, stove manufacturer, of Sackville, has been probated. The estate was $10,000 real and $390,000 personal. This is the largest estate ever probated in Westmoreland county. The executors are the two sons, Horace E. and Chas. W. Fawcett, and the son-in-law, Fred. Ryan. With the exception of two or three small bequests, the property is divided equally between the three children.

ST. JOHN.

St. John, Dec. 31.—St. John hardware merchants report that the holiday trade was very satisfactory and about equal to other years. There had been fear that there would be a falling off owing to reports of business depression, but the merchants appear to be well pleased with the volume of business done.

* * *

Some of the manufacturers have shortened the working hours in their establishments, but they do not look for any great recession from a steady trade. They claim the move for shorter hours is simply a move in the direction of caution. All seem to be hopeful of the future.

* * *

Despite the discouraging reports from abroad the business being done by the winter port steamers has so far been very satisfactory, showing an increase in the amount of goods exported, over last year.

Up to date 26 steamers have arrived with a total tonnage of 97,561, as compared with 24 arrivals last year to this date, with a tonnage of 85,001.

Twenty steamers have sailed, taking away large cargoes. Last year the value of exports up to Dec. 28 from 21 cargoes amounted to $3,206,426, while returns made at the customs house up to that date this year from 15 cargoes, amount to $3,000,173. Four steamers that have sailed have yet to make returns, and as they all took large cargoes the total value will be considerably ahead of last season.

The value of United States products included in this year's figures from the 15 cargoes, amounted to $738,289.

Over 1,000,000 bushels of wheat have been shipped on the steamers as well as upwards of 8,000,000 feet of deal.

* * *

There are rumors to the effect that the claim of B. Mooney & Sons, contractors, against the city of St. John, in connection with their work of laying the pipes for the water extension, may be settled out of court. The case was to have came up early in January, but it is now learned that Messrs. Mooney have made an offer of settlement. The amount asked from the courts is $100,000, but it is believed the contractors would accept about quarter that sum and withdraw the suit.

The long standing claim of Hyde & Webster, of Montreal, against Fredericton, on account of pipe delivered under contract for the sewerage system, has been settled at last. The firm consented to accept $3,088 in settlement and their local solicitors, Slipp & Hanson, were handed a check for this amount. The city will retain possession of a quantity of the pipe which Engineer Barbour condemned while the work was going on.

* * *

A movement is on foot in Carleton county to establish a hardwood flooring mill. J. K. Fleming, M.P.P., is the leading mover in the project. It is probable that Hartland will be chosen as the site of the new industry. The company will be capitalized at about $15,000, and will manufacture something like 1,000,0000 feet of flooring, for which there is a ready export market.

GEORGETOWN, P.E.I.

Georgetown, Dec. 27.—Business has been very good in Prince Edward Island throughout 1907. For a time before Christmas there was excellent sleighing. Out of town customers took advantage of the good roads and did their holiday shopping early, and as a result of the general prosperity throughout the island province the Christmas trade was much above last season's.

The retail hardwaremen are making greater efforts each season to secure more of the holiday trade and the showings this season were a credit to the province. Customers, too, are realizing more and more that a gift selected from a down-to-date hardware store is appreciated both for its beauty and durability.

* * *

"Caution" is the motto among the trade at present. As a result of the fluctuations actual necessities are the principal purchases.

Collections may be termed good. The tendency is more towards cash. Our own opinion is that within the next ten years business in general will be conducted in Prince Edward Island on a strictly cash basis. The movement is certainly in that direction, the desirability is evident to all.

* * *

Four new locomotives recently arrived in Georgetown from Picton for the Prince Edward Island Railway. These are much more powerful than any at present in the service, and should prove a splendid addition to the road. The accommodation from the travelers' standpoint on our railway is good. The rolling stock is excellent, but the freight rates are above all reason. We have been in the west and know something of the C.P.R.'s monopoly, but the two are not to be compared. The freight rates on the Prince Edward Island Railway are excessive. It is time something was done to improve conditions, and we trust too that there will be a reduction in express rates.

* * *

There is a splendid opening in Prince Edward Island for a stove foundry and no town offers more inducements than Georgetown, the winter port. Here shipping facilities are unequalled, raw material is a next door neighbor, taxes are light and labor cheap. At present the greater portion of our stoves and ranges are imported from Montreal, Sackville and Yarmouth. This ought not to be.

* * *

Up to this late date the splendid new steamer service is still running between Georgetown and Picton. This steamer was especially built for the Three Rivers Steamship Co., and is one of the best boats on the service between the island and the mainland.

* * *

Bruce, Stewart & Co., Charlottetown, have issued a very beautiful calendar, entitled "Bonnie Mary of Argyle." It is the custom of this progressive establishment to issue annually a calendar with a Scotch subject.

* * *

A. M. Bell & Co., Halifax, are presenting with their compliments their island customers with a very fine nickel plated lead pencil with cylinder of leads.

* * *

The demand for skates has been very good this season. In fact sporting goods as a whole have had a very ready sale.

Reported by Ontario Correspondents

Reports Regarding Holiday Trade—New Brass Plant at Belleville—Some Encouraging Reports Regarding 1908 Industrial Outlook—Some Hardwaremen in the Municipal Elections.

TORONTO.

Toronto, Jan. 2.—The holiday season is over for another year and the merchants, clerks, etc., of local stores are enjoying a rest, which they have earned during the bustle of the last two weeks. The class most affected by the annual Christmas rush are the employes of the post office and the express companies. Year by year conditions governing these branches of service become more congested at Christmas and though each year staffs are increased for the busy season the effect of the rush leaves a lot of thankful, worn-out clerks and messengers to recover from the effects of overwork caused by long hours and hard toil in the busy season.

* * *

The new year was ushered in quietly but busily, the annual municipal elections occupying the minds and attention of the electors. Joseph Oliver, lumber merchant, candidate for the mayoralty, defeated his four competitors by a larger majority than that given a Toronto candidate for a number of years.

* * *

The situation in Toronto and locality as regards the money stringency, which has so affected our American neighbors, has left but a slight stamp on the local merchants. During the year just closed, business, both in manufacturing, wholesale houses, and in the stores, has been satisfactory to all concerned and though for the past few months money has been scarce, the situation at present appears to be clearing up satisfactorily and the hardware trade in Toronto seem well pleased with the prospects for a busy and progressive 1908.

* * *

In the winter months merchants all over the country are troubled by the formation of frost on their show windows, caused by the warm air of the store heating the cold glass and causing a mist, which is frozen by the outside air. A few weeks ago Hardware and Metal outlined a method of spreading glycerine on the outside of the window to prevent frost from adhering to the glass. This method may prove quite satisfactory, but a better one has been adopted by a local hardware merchant. In his case the large show window contains two electric fans, which are kept in operation at a small cost and as they attract attention to the display, in addition to keeping the window free from ice, they are a cheap innovation for the hardwareman. In the spring, when the fans are not needed, the demand is sufficient in most localities to dispose of any that have been in stock.

* * *

From the Maritime Provinces comes a despatch to the effect that hardware jobbers will shortly decrease the time allowed on notes to the retail trade from three to two months. When interest is so high the wholesalers claim that they cannot afford to give the retail trade the benefit of their goods for three months, as is the case at present, and there seems, according to local jobbers, every chance of decreasing the time to 60 days, with 2 per cent. off 30 days. A few years ago the jobbers gave longer credit, the following table bringing the scale down to the present time:

6 months, 5 per cent. of 30 days.
4 months, 3 per cent. of 30 days.
3 months, 2 per cent. of 30 days.

And now the jobbers are talking of making the scale the same as exists at present in the United States, namely, 60 days, with 2 per cent. off 10 days.

BELLEVILLE.

Belleville, Dec. 30.—Last week we referred to the gratifying fact that the new and handsome premises of the Brass and Steel Goods Company, Limited, had been completed and that the machinery was fast being installed.

* * *

The foundations of the building are upon the solid rock, the walls of brick and stone are 24 inches in thickness, thus providing for future extension when upper storeys are required, the frontage length being 136 feet, and width 40 feet. At present two storeys of 12 feet each, stand upon 40 feet by 40 feet and boiler house 16 feet by 16 feet has been erected, as also a corrugated iron sheeted coke shed.

The windows of the main building are a striking feature, being 12 feet wide, divided into three sections, the lower sash fitted with frosted glass.

* * *

A steam heating equipment of latest design was installed by J. Lewis & Co., of this city, and the gas piping, plumbing, etc., has been well handled by Wm. McGee.

* * *

At the present time there are about a dozen hands at work, mostly employed in preparing dies, patterns, and placing machinery in position. Although some manufacturing is being carried on, it is expected soon to have about fifty hands; and as the business develops, several times that many.

* * *

The goods are made from cast and wrought brass, and there is scope for plenty of development as there are large quantities used, now being imported; trunk, refrigerator, cabinet and padlocks, as well as hinges, being amongst the most prominent.

* * *

H. C. Hunt, P. C. Jones and Henry Pringle have been actively engaged in establishing the industry, the two former now devoting their entire time to its development.

HAMILTON.

Hamilton, Jan. 1.—"Rotten," was the more expressive than eloquent expression used by one of the leading hardware dealers when speaking about the Christmas trade a few days ago. And that merchant spoke the sentiment of every other hardware dealer in Hamilton, thus fulfilling your correspondent's forecast of last week. But the hardwaremen are not the only ones who are complaining of the trade, as the weather conditions played havoc with practically every line of the business. The merchants attribute the lack of business chiefly to the uncongenial weather and alleged hard times. There appeared to be a feeling of uncertainty among the buyers, they hesitated at commencing their shopping and when they did start their purchases were few and comparatively small.

The week immediately preceding Christmas was exceptionally quiet for that time of year, but the merchants looked forward to big sales the latter end of the week and the early part of Christmas week. The city was visited by one of the largest snowstorms in its history that week and business was almost completely tied up. Christmas week saw a good crowd of people in the stores, but as has been previously stated, they were very careful and in the majority of cases their purchases were small in number, as well as value. There are a large number of factories closed at present and this had a bad effect on the trade, and, together with the fact that the weather was uncertain and shifty, resulted in a very small demand for hardware materials.

* * *

H. G. Wright, of E. T. Wright & Co., lantern manufacturers, who served in the city council as an alderman last year, and who a few weeks ago announced his intention of retiring from the council, has given way to the entreaties of his friends and has consented to allow his name to go before the electors once again. The elections will be held next Monday, and Ald. Wright's election is almost assured.

* * *

Norman Clark, of Adam Clark & Co., plumbers, is also a candidate for aldermanic honors this year. He has been an alderman for several years and had considerable success in administering the affairs of the city. Hugh Sweeney, stove dealer, who has been an alderman for several years, is another candidate who will interest Hardware and Metal readers. Like Ald. Clark, he has had a very successful career and his re-election is almost assured.

* * *

Great interest is being taken in this city in the coming elections, in view of the fact that two important bylaws will be voted on. One will be to vote $225,000 for the installation of a municipal lighting plant, and the other will be to authorize the expenditure of $50,000 on electric pumps for the waterworks system. The first mentioned by-law is the subject of much consideration and discussion, and as it is such an important question Mayor Stewart has arranged for a number of public meetings for the education of the ratepayers on the subject. The reason that the matter is of such great importance is because the city is to get its power supply from the Hydro-Electric commission if the plant is installed, which means that the Dominion Power & Transmission Company, which controls the electrical situation here at present, will have strenuous opposition. Needless to say, the big power company is putting up a hard fight against the by-law, and the prospects are not any too bright for its passing.

* * *

The value of the buildings for which permits were taken out during the year amounts to $2,758,540, an increase of $773,850 over last year. The value of the permits for December was $28,300, as compared with $26,850 for the same month last year.

* * *

On Monday night of this week Ford & Featherston, the Canadian agents of the Carey Safe Company, of Buffalo, entertained their travelers at the Hotel Royal. There were about twenty-five present, and speeches were delivered by F. Ford and G. S. Dellinger, local manager.

GALT.

Galt, Dec. 31.—The hardware and other merchants in Galt have every reason to feel satisfied with the past year's trade, and particularly with the Christmas buying. While they are willing to admit that trade has not been up to former years, they claim that they have no complaint to make, and that in reality, the cry of hard times is the work of certain parties with axes to grind.

* * *

A number of industries in Galt have closed down for the holiday week, in order to take stock. It is expected, however, that the new year will see every industry running full time, with prospects of a very busy year.

* * *

The hardware men are enjoying a very restful week, by reason of the fact that the drummers are off the road for the holiday time.

* * *

The Canadian McVicker Gas Engine Co., an industry established in Galt over two years ago, and which was largely backed by F. Euchson Brown, now a practicing lawyer in Toronto, has gone into liquidation. The company was established under promising auspices to manufacture a gas engine in Canada which had attained a wide reputation in the States for cheapness, simplicity and effectiveness. The working principle was novel and approved by engineers and there appeared to be a good field for the new engine on this side of the border. Mr. Brown took considerable interest in the new venture and invested a large sum of money, but subsequently withdrew from the control of the concern. Efforts to readjust affairs appear to have been ineffectual and an assignment followed the issuance of a writ. It is felt, however, that the business has a future, and that with readjustment it can be successfully carried on.

* * *

John Ridell, a Beverly farmer, worth $10,000, was on Monday sentenced to six months in Central Prison for stealing from the sleighs of farmers which had been left in hotel yards. The affair has created quite a sensation.

GUELPH.

Guelph, Dec. 31.—Some time ago the galvanized iron chimney of the Guelph Axle Company was blown down in a gale of wind. The firm has completed the building of a brick chimney, and were closed down for a few days last week while connecting it with the boilers.

* * *

Harry Occomore, tinsmith and stove dealer on Upper Wyndham street entertained his employes on Friday evening at the Kandy Kitchen. Thirteen in all sat down to the tables, where a dainty repast was served. A pleasant social time was afterwards spent.

* * *

"No contractor will take a contract where the city specifies that all work be done by local workmen," said James Le Grand, the contractor, for the septic tanks, in speaking of the agitation of the Trades and Labor Council to make it a necessity for the City Council to insert a clause in all contracts let, to give local, or, at least, British workingmen, the preference. Mr. Le Grand expressed the opinion that such a castiron rule would make it impossible for the city to secure contracts on most of the public works, as no contractor would feel justified in making any such agreement.

The town of Elmira is thriving mightily. In that little manufacturing centre, every factory is working full time, and some of them overtime. The merchants there enjoyed a splendid Christmas trade.

* * *

The nominations for aldermen were held here on Monday evening, and it is expected that the elections will be close ones. Among those nominated were George Penfold, of S. & G. Penfold, hardware merchant; H. Mahoney, of Mahoney Bros., plumbers, and C. H. Crowe, of Crowe's Iron Works.

George Penfold said that the city of Guelph stood above any other place in Canada, and he trusted everyone, especially the working people, would take advantage of the opportunity to obtain power at first cost—an opportunity which we may never get again. Canada at present is in the hands of the coal barons, and cheap power will make us more independent.

Henry Mahoney said that he would vote fearlessly at the Council board, and would serve the city to his ability.

LONDON.

London, Dec. 31.—Business, both wholesale and retail is quiet, as is usual at this time of year. Stock taking will be done with by the end of the week and travelers will start out the beginning of the year with every confidence that 1908 will prove as prosperous a one as its predecessor.

* *

The hardware and metal trades are pretty well represented among this year's candidates for municipal honors. Ald. Stevely, one of the mayoralty nominees, is engaged in the tin and stove business, while for aldermen the following are among the candidates. J. K. H. Pope, secretary of the McClary Manufacturing Company; George W. Armstrong, brass manufacturer; Wm. Wyatt, ex-tin and stove dealer; A. W. White, manufacturer of engines, etc.; Wm. Scarlett, of Wortman & Wood; Benj. Noble, master plumber, and Robt. Parsons, retail hardware merchant, the whole numbering more than half enough to form the entire Council.

* * *

The framework of the new roof over the big additions to the Grand Trunk car shops is completed, and the work of roofing in is now proceeding. The completion of the new structure will greatly increase the facilities of the shops.

* * *

Contractor G. Gray has received the first shipment of iron for the new cribwork at the foot of Main street, Port Stanley. The iron was brought to London and sent to the Port over the Southwestern Traction line.

* * *

The widow of the late Frederick T. Howe has entered action against the McClary Manufacturing Company to recover $10,000 damages for the death of her husband. Howe was engaged oiling machinery at the McClary works in March last, when the ladder upon which he stood broke and threw him against a revolving shaft, which caught his clothing and whirled him to death. Plaintiff claims the shaft was not properly guarded.

* *

The "limerick" craze has reached the local hardware trade, Cowan & Co. having been the promoters of one just brought to a successful close. Two prizes were offered, aggregating in value about $12.

* * *

Arthur W. White and his solicitor, George C. Gibbons, K.C., were in St. Catharines on Saturday in connection with the purchase of a large site which the firm of George White & Sons have had under consideration for some time. As has before been stated, the firm are dissatisfied with local conditions, finding it impossible to obtain proper sewer connection for their establishment on Rectory street, and frequently of late have threatened to move to some other town. Whether a deal has been closed at St. Catharines cannot yet be learned.

* * *

The Schott Machine Company have received three more orders from the department of public works for the L. & K. test boring machine. One is to be shipped to Charlottetown, P. E. I., another to Antigonish, N.S., and the third to Calgary, Alberta.

CHATHAM.

Chatham, Dec. 31.—Municipal nominations took place on Monday morning. The hardware and allied trades were fairly well represented among the nominees for the council, the list including "Archie" Park, of Park Bros. boiler and engine works; W. R. Landon, of the Chatham Manufacturing Co.; Ald. W. H. Westman, of Westman Bros., and Fred H. Bresco, of Bresco Bros. It is probable, however, that Ald. Westman and Mr. Bresco are the only ones who will stand.

* *

E. J. Welsh, of Windsor, who has been engaged for some time past as traveling salesman of the Massey-Harris Co., has accepted a similar position with the Manson, Campbell Co. of this city.

* * *

Owing to the stringent regulations placed upon the shipping of dynamite and other explosives at Essex since the recent explosion there, it is said that the Dunbar & Sullivan Co. will establish a plant for the manufacture of powder required by them at Amherstburg next spring.

* * *

The C. W. & L. E. Railway Co. held its annual meeting in this city last week. There was a good representation of shareholders, the following officers being elected: President, Geo. W. Kipp, Towanda, Pa.; vice-president, D. A. Gordon, M.P., Wallaceburg; general manager, Geo. J. Fielder; superintendent, S. Fitch; secretary, J. G. Kerr. The meeting was most harmonious and the future prospects of the road are stated to be very bright.

* * *

The annual meeting of the Chatham Steam Heating Co. was held at the same time as the electric railway meeting, the same officers being elected, save that N. H. Stevens was chosen vice-president instead of Mr. Gordon. A dividend of 2½ per cent. was declared on the capital stock.

* * *

J. G. Crosby, the Highgate hardware man, states that he did more business during the past year than in any year since 1900.

* * *

Stanley Law, of Stephens & Douglas, hardware store, spent Christmas at Ingersoll.

West of the Great Lakes

Edmonton's Industrial Possibilities—Opening for Leather and Other Industries —Railway Building at Saskatoon—Bright Prospects for Expansion of Brandon in 1908.

EDMONTON.

Edmonton, Dec. 19.—Edmonton at the present time offers unusual advantages to industries of varied natures. Surrounded by a rich area of land extending for several hundred miles in every direction it is in an excellent position to attract these industries. The two important factors to be considered by every manufacturer, the nearness of the raw product and the market for the manufactured article, are both supplied in this city. Strategically situated in the heart of a rich farming and mineral country, with a vast region of future possibilities tributary to it, Edmonton offers exceptional advantages as the market, already large, is constantly growing larger as the country becomes more thickly populated. From the rich area surrounding the city, the raw products necessary for the manufacture of dozens of articles used by the people, are to be found in abundance, and all that is required is enterprise and capital to develop their local manufacture. Another important feature in the eves of the manufacturer is transportation facilities. Edmonton is on the direct line of the great trans-

continental, the Grand Trunk Pacific, now being constructed, the Canadian Northern is already built to the city and is extending its branch lines west and north opening up new country. While the C.P.R. is making extensive plans to build new lines to the city other railroads to tap the country to the north are already being planned, thus giving all the advantages of keen competition among rival railroads.

* * *

During the past year work has been started on one industry in Edmonton that will doubtless prove a paying proposition and will do much to develop the city and that part of Western Canada adjacent to it. This is the Griffin Packing plant, which is partly built and which will be completed early next year. In the country surrounding here canned meat is used extensively and every year hundreds of cars of canned meats are shipped into Edmonton from the great packing plants at Chicago, Kansas City, Montreal, London, Prince Edward Island and elsewhere.

* * *

Closely connected with a meat packing plant will follow opportunities for the establishment of an extensive tannery and boot and shoe manufactory. Hundreds of carloads of hides are every year shipped east and made into leather and the leather shipped west again both in bulk and in the form of boots and shoes and all other articles made from leather. Tanneries could be established here and the thousands of people throughout the West supplied with leather goods at a greatly reduced price.

Following in the wake of the canning and meat packing industries, factories could be established to use the waste material from these plants. Soap works, chemical works, glue factories and many other industries would follow in natural succession that would quickly convert Edmonton from a mere distributing point to a great manufacturing centre as well. Nor would the market for these products necessarily be confined to Western Canada alone. As a proof that competition with Eastern firms by Edmonton manufacturers in Europe is feasible it has been pointed out that the freight rate from Edmonton to Liverpool is very little in excess of the freight rate from Chicago to Liverpool. The consumers in Great Britain express a decided preference for Canadian hams and bacon over those produced by Americans and by careful attention to the quality of the article produced the same preference could easily be secured for other lines.

* * *

In the manufacture of cereals and all kinds of breakfast foods, as well as that of biscuits, there is a great field for the Edmonton manufacturer to replace the Eastern firms that are shipping their goods into the West. The big grain soft fall wheat that is the most satisfactory for making cereals and pastry, can be grown in abundance in Alberta. At the office of the Board of Trade is a sample of this class of wheat, Dawson's Golden Chaff, that would be the very best for the manufacture of cereals. This sample was taken from a field of 50 acres that produced 40 bushels to the acre, showing that the yield is large. Local millers do not encourage the growth of this kind of wheat, however, as it is unsuitable for bread-making purposes.

In oats there are possibilities of competing even in the Eastern market. It is a comparatively well known fact that Alberta oats will make the best rolled oats in the world, and the demand for this by judicious advertising could be made world-wide.

* * *

In the building line also the opening for manufactures are great. It was evident during the past summer that the supply of bricks for building purposes was not nearly sufficient, due to the fact that it took too long to prepare them for use. A sand lime brick plant established here would obviate this difficulty as bricks can be made ready for use in 24 hours, being steamed instead of baked. The sand for the purpose must possess a certain chemical constituency and the sand in this locality has been analyzed and found to be satisfactory for this purpose. Lime also has been found here but has not been exploited.

* * *

In the manufacture of wood fibre plaster that is now used extensively in building there are opportunities in Edmonton. The useless poplar and spruce trees that grow in abundance all over this country could be utilized for this purpose, and marl, which is known to be present in large quantities could be used to manufacture cement. At present the wood fibre plaster used here is manufactured by the Manitoba Gypsum Company, near Winnipeg.

There are many other industries, such as a stove factory, that would find in Edmonton a suitable place to locate, and the manufacturer who realizes this soonest and gets in on the ground floor is the one who will get the greatest benefit, and who will help Edmonton to take her place as the leading centre in Western Canada.

* * *

At the first representatives' convention of the allied labor men of Alberta, held in Calgary last week and attended by delegates from all parts of the province, it was decided to adopt the platform and name of the Socialist party. The labor unions of the province pledge themselves to work for the advancement of this party in future.

* * *

The hardware trade in Edmonton is good. This is the opinion expressed by all hardware merchants in the city. Business has been good all fall and the approach of Christmas has stimulated this trade greatly. The hardwaremen of the city have recently been paying more attention to window decorations than in the past and their window displays are as attractive as that of any merchant in town.

* * *

The employes of Ross Bros.' hardware store have formed a hockey club and the team played their first game of the season last week at the city open air rink when they went down to defeat before the Queens Ave. team by a score of 6—0. There is some good material in the team, however, and before the close of the hockey season they will doubtless give a good account of themselves. The line up of Ross Bros.' team was: Allan, goal; Brayton, point; Chinnick, cover point; Dawson, rover; Bellamy, centre; Milling, right wing; Dickie, left wing.

* * *

A unique display has been arranged in the window of the Sommerville Hardware Company, First St. Three electric fans were placed in opposite corners of the window and set in motion. In the centre was a heap of light feathers which were blown about by the forced draft. Underneath the feathers were hockey sticks and skates peeping through here and there. The whirling feathers caught the attention of the passersby and nearly everyone paused to look in at the novel window display.

* * *

The price of coal in Edmonton is less than last year on account of the large increase in the output over that of 1906-07. In quantities it may be secured for $3.50 and $4 for a single ton, while last winter the price was $4.50 and $4.75 per ton.

* * *

The Alberta Poultry and Pet Stock Association executive have held several meetings recently in the Stovel Hardware Store, making arrangements for the winter exhibition to be held early in 1908. Jas. A. Stovel is president of the association and has always taken an active interest in the affairs of the association.

* * *

A German club has been formed in the city recently and a new club house erected.

* * *

Merchants in the city are keeping "open shop" every night this week on account of the Christmas trade and the clerks are all kept busy.

* * *

R. E. Jones, manager of the Winnipeg Paint and Glass Company, was in the city last week on business.

An attractive arrangement is to place your stoves in a row down the centre of the store, ranged where possible according to price. A customer has a chance to compare the stoves if you follow this plan.

BRANDON.

Brandon, Dec. 27.—The statement of building operations in Brandon during 1907 shows a total of $704,290, against $724,905 in 1906. These figures are very satisfactory, but they do not convey to the casual reader a proper significance of the development of the city along other lines. Take the item of expenditure on permanent railway buildings for instance and the figures would appear very insignificant were they compared with the expenditure on permanent roadbeds and yards which have been constructed within the corporation. The Great Northern has expended on construction work alone $250,000. The Canadian Northern Railway Co. has under construction a $30.000 roundhouse, and have purchased a site upon which they propose to erect a $45,000 depot during 1908.

* * *

The Brandon Winter Fair Building is now completed at a total cost of $45,-000. $30,000 of the capital subscribed was subscribed by Brandon citizens and it is the intention of the directors to have the total amount subscribed so that the building will be free of encumbrance. The first exhibition will be held from March 10 to 13, inclusive. The object of the association is to encourage the monthly sale of stock and annual exhibitions of all classes of farm stock and grain.

* * *

Every implement firm should be represented in Brandon. The southwestern district, of which Brandon is the distributing centre, had 1,155,456 acres in wheat during 1906, with a total yield of 20,879,089.9, which was better than one-third of the acreage and crop of the entire province. The provincial figures are: Total acreage to wheat 3,141,537; total yield, 61,250,413.4.

* * *

The expenditure for the extension of water mains was $11,440. Installation of new services, $4,598. New meters, $5,000. Over 7,000 feet of sewer pipe were laid.

A contract has been entered into between the city and the C.P.R. to supply the company with water for a period of five years at a rate of 7c. per 1,000 gallons for a consumption of 150,000 gallons or under, should the consumption exceed 150 000 gallons, the cost will be 6½c. per 1,000 gallons.

A by-law regulating water rates for railway corporations was passed recently, which gives the companies a very low rate.

The city provides water to manufacturers with a rate of 12½c. per 1,000 gallons.

SASKATOON.

Saskatoon, Dec. 27.—This week hardwaremen did a good business in skates and other seasonable goods, such as cutlery and plated ware, suitable for Christmas gifts. The opening of a covered rink in the west end also helped things considerably in the sale of curling stones and hockey goods. This rink is under the management of Elford & Cornish. The rink was opened a few nights ago for the first time. A band was in attendance and the proceeds were handed over to the hospitals.

* * *

The installing of the plant has now been completed in the new brewery of the Hoeschen-Wentzler Brewing Co. The other day seventy-five barrels of beer were made and stowed away in large vats to mature. The Goetz & Flodin Co., of Chicago, and the Vilter Manufacturing Co., of Milwaukee, installed the plant, and several local men assisted in the plumbing and fitting. The proprietors are John Hoeschen, of Melrose, Minn., and Fred. Wentzler, of St. Cloud, Minn., who are both experienced in the manufacture of beer. The buildings cover nearly an acre of ground and are located between the river and the C. N. railway, thus giving a plentiful supply of water and excellent railway accommodation. The new company have their own fire protection and electric lighting plant, and part of the machinery is propelled by motive power, which is considered more satisfactory than steam. In the meantime barley is imported from the States, but as soon as a malthouse can be constructed it is anticipated that malt barley will be grown in this vicinity, of which 2,500,-000 bushels will be required yearly.

* * *

It is now definitely known that the Canadian Northern Railway will spend about $60,000 on the erection of a new station and freight sheds here next year. A $30,000 station will be constructed on Twenty-first street and as large a sum will be expended on freight sheds and other necessary buildings. The plans are said to be almost complete and contracts will be awarded early in the New Year, when operations will commence as early in the spring as the weather will permit. A new station cannot be built too soon, for the present C. N. station does not afford much accommodation to the travelling public, being altogether too small for the summer business and present-day requirements.

* * *

The first carloads of wheat over the Grand Trunk Pacific came into Saskatoon last week. Although the Grand Trunk Pacific railway is not yet in full operation it was thought advisable to bring in as much wheat as possible over the new route from points on their line, thus relieving the farmers in these districts. The wheat is turned over to the Canadian Northern here for removal to the east. It is the intention of the company to continue to meet the requirements of the towns through which the steel is laid until the regular service is commenced in the spring. The Canadian Pacific and the Grand Trunk, although not nearly completed, are putting forth an effort to relieve the wheat situation wherever possible in the districts through which they run. Asquith, on the C.P.R., was one of the places which stood greatly in need of a regular train service. There is a vast wheat-growing country surrounding it, and farmers hauled their wheat from far and near to have it shipped, When a train of about a dozen empty cars was sent out these were pounced on by eager farmers who were anxiously waiting to dispose of their wheat. In many districts the elevators are full, notwithstanding the relief which has come, but it is gratifying to note that the railways are getting a move on as the disposing of wheat means everything to the west. Give the farmer his money and he will be in a position to not only settle old scores, but also to purchase new machinery and materials for the coming season.

CALGARY.

Calgary, Dec. 26.—Business in all trades at the present time is particularly good. Building operations are still being carried on pretty generally. Sherman's big auditorium roller rink is just completed and was opened last week with a monster entertainment for the benefit of the hospitals. The stage of this building is one of the largest in America, being one hundred feet wide by fifty feet deep, and the seating capacity of the theatre is between four and five thousand.

* * *

One of the events of note during the past week was the opening of the Horchover restaurant, which is, perhaps, one of the best fitted out institutions of its kind in the west. The opening banquet was attended by the mayor and council and many of the prominent merchants and citizens. The equipment in the hardware line, which was furnished by Linton & Hall, of this city, consisted of wine coolers, baking dishes, servers, cruets and flat-ware, manufactured by the Menden Britannia Co., of Hamilton, and the Toronto Silver Plate Co., and the value of it exceeded three thousand five hundred dollars. This fine display of silverware was on view in Linton & Hall's window for one week before the formal opening of the restaurant, and made a very good showing.

GET THIS IN YOUR LOCAL PAPER.

The following article seems to strike on the head the cause of the so-called financial stringency which is being felt to some small extent in Canada just now. It is well worth being spread broadcast. It would be well worth the trouble on the part of our readers to take this issue to the editors of their local newspapers, draw attention to article and induce them to publish it. It will be just as useful to the publisher as to the retailer:

Panics are always irrational, because they are born of unintelligent fear, or because they greatly increase the possibilities of peril. There are many occasions which justify a panic. When a real danger comes, the first duty is to keep one's mind at the highest point of intelligent action, and to keep one's emotions out of sight and hearing. In the face of a great danger a man ought to listen to his judgment, not to his emotions. The worst feature of a panic is that it makes men cowards when it does not make them brutes; and the special form of cowardice which comes with financial stress is unwillingness to part with money, the tendency to hoard what one has and increase the peril, instead of generously giving it out and thus removing the cause of the peril. In every stringency a host of people begin by not paying small bills even more than large ones which prolongs hard times, and unjustly and unnecessarily lays a heavy burden on the backs of some of the most prudent and honest members of the community. An honest man always pays his debts. If misfortune overtakes him the day of the discharge of his obligation is only postponed; it comes as soon as he can make ready for it. But in a time of panic it is every man's pressing duty to pay his debts with the utmost promptness.

There are hosts of people to-day who have money in hand and are letting

their grocers, butchers, milkmen and others who supply the necessities of life go unpaid simply because they are timid and, like some country and city bank, want to collect and keep as much money on hand as possible ; as if money were for hoarding and not for circulation. This small-minded precaution is bringing misfortune to many industries and faithful men and women. Those who supply the means of life, whose coming and going from the house are part of the daily routine of keeping the family alive, ought to be the very last to suffer from delayed payment. As a matter of fact, they are the very first. People who can still spend money upon the theatre, the opera, concerts, and other forms of entertainment, are letting their grocers, butchers, and milkmen go unpaid, thus contributing to the very condition which makes them cowardly. There is no longer any reason for timidity ; but if there were, the duty of paying one's small debts with as great promptness and as deep a sense of responsibility as one pays one's large debts would press still more imperatively. It is a great deal more honorable to have a small bank account and no unpaid bills in the house than to have a large bank account made up by keeping money which belongs to other people. The first duty of an honorable man in a time of stringency is to see that he is not transferring to those who furnish the necessities of life the burden which he ought to bear himself.—The Outlook.

W. OSCAR LABELLE, PETERBORO

Who Has Left the Road to Join the Kingan Hardware Company, Peterboro.

TRAVELER BECOMES RETAILER.

W. Oscar LaBelle, who represented Lewis Bros., Montreal, east of Toronto, for several years, has become a member of the old established firm of the Kingan Hardware Company, Limited, Peterboro. The city is a fine centre of industry, situated as it is on two lines of railways, and with unlimited water power, is bound to extend its manufacturing scope. The Kingan Hardware Company conduct a large business, and Mr. LaBelle's wide experience, both retail and wholesale, should prove of great value in extending the firm's operations.

CONDENSED OR "WANT" ADVERTISEMENTS.

RATES.

Two cents per word first insertion; one cent per word subsequent insertions.

Five cents additional each insertion where box number is desired.

Contractions count as one word, but five figures (as $1,000) are allowed as one word.

Cash remittances to cover cost **must** accompany all advertisements. **In no case** can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

RULES FOR COPY.

In addressing replies care of HARDWARE AND METAL don't fail to give box number.

Replies addressed to HARDWARE AND METAL boxes are re-mailed to advertisers every Monday, Wednesday and Friday.

Requests for classification will be followed where they do not conflict with established classified rules.

Orders should always clearly specify the number of times the advertisement is to run.

All "Want" advertisements are payable in advance.

AGENTS WANTED.

This is the problem of many manufacturers who are anxious to get a foothold in Western Canada. It will be easily solved if HARDWARE AND METAL is given the opportunity to solve it.

AGENT wanted to push an advertised line of Welsh tinplates; write at first to "B.B.," care HARDWARE AND METAL, 88 Fleet St., E.C., London, Eng. [tf]

A SOLINGEN manufacturer of pocket cutlery, razors and scissors is open to appoint an agent for the sale of his goods in Canada; his present agent is retiring from business. This is a good opportunity for a young man with a small capital to make money, as the cutlery has a large sale with the best retail trade. It is necessary to carry a stock of about $3,000. Apply to Box A, HARDWARE AND METAL, Montreal.

AGENCY WANTED

WANTED—Sole agency for high class line of hot air furnaces by reliable hardware firm at Calgary, Alta. Address Box 678, HARDWARE AND METAL, Toronto. (tf)

BUSINESSES FOR SALE.

Somewhere in Canada is a man who is looking for just such a proposition as you have to offer. Our "For Sale" department brings together buyer and seller, and enables them to do business although they may be thousands of miles apart.

FOR SALE—About $1,500 worth of hardware and $200 worth of glass, at 75c. on the dollar; 400 ash front hardware drawers assorted sizes, from 4½ inch to 14 inch x 6 inches high, with solid brass pull at 9c. each; one 6 foot square-top show case, $10; two 60-gal. coal oil tanks at $300 each. J. D. Murdoch & Co., Simcoe, Ont. (52)

ESTABLISHED, growing, paying business — furnaces, stoves, kitchen goods, etc.—in live city; good stand; long lease; low rental. A fine opportunity. Owner has other interests. Box 682, HARDWARE AND METAL, Toronto. (3)

FOR SALE — A well-established hardware, tinware and furniture in a good town in Ontario; stock about $6,000; yearly turnover about $16,000; satisfactory reasons for selling. Apply Box 681, HARDWARE AND METAL, Toronto. (1)

ARTICLES FOR SALE.

Don't keep any fixtures or tools around your store for which you have no further use. They are worth more to-day than they will a year hence. Don't keep money tied up which you could use to secure discounts from your wholesaler.

SET of tinsmith tools, good as new, Peck, Lowe & Wilcox make; $125; great sacrifice. Box 672, HARDWARE AND METAL, Toronto. (1)

ARTICLES WANTED.

If you cannot afford to buy a new counter, show case, screw cabinet, store ladder, or some other fixture which you could use to advantage, try a "Want Ad." under "Articles Wanted," and you may get what you want at a bargain price.

WANTED — Second-hand revolving screw case for retail counter. Kindly write giving description and price to The Hobbs Hardware Co., Ltd., London. (51)

BUSINESS WANTED

WANTED—Good live hardware business in Ontario, city or town preferred. Box 677, HARDWARE AND METAL, Toronto. (2)

SITUATIONS VACANT.

You can secure a "five-thousand-a-year" manager, or a "five-hundred-a-year" clerk, by stating your wants under "Situations Vacant."

WANTED—Experienced salesman for our specialties to work Montreal and eastward. Canadian that speaks French preferred Address Wolverine Brass Works, Grand Rapids, Michigan. (1)

TINSMITH for old Ontario, experienced in bench work, cheese factory work, furnace work, sheet metal work and pipe fitting, must be able to do plumbing where iron pipe is used; must be worker and regular in his habits; this is a steady job and $18 per week is paid and overtime may be worked which would bring the wages up to $1,000.00 per year. Applications with references to be sent as soon as possible work can be commenced any time but for a satisfactory man I would wait until Jan. 20th, 1908. Living is as cheap in this town as any town of its size. It has the finest of schools and churches and a beautiful lake. Box 670, HARDWARE AND METAL, Toronto. (52)

DO you want to learn sheet metal pattern drafting? a postal card will bring you full particulars; we also sell patterns for any kind of sheet metal work. The Sheet Metal School, Galt, Ont. (3)

SITUATIONS WANTED.

Travellers, clerks, or tinsmiths, wishing to secure new positions, can engage the attention of the largest number of employers in their respective lines, by giving full particulars as to qualifications, etc., under "Situations Vacant."

WANTED—Traveling salesman. Apply by letter, stating experience and giving references. The Gurney Foundry Co., Limited, Toronto. (1)

WANTED — Position as foreman tinsmith and plumber; would take an interest. Box, 683 HARDWARE AND METAL, Toronto. [4]

HARDWARE clerk with four years' experience in general hardware wants situation at once; references. Box 675, HARDWARE AND METAL, Toronto. (51)

HARDWAREMAN open for immediate engagement. Box 679, HARDWARE AND METAL, Winnipeg. (52)

Assignee's Notice of Sale

UNDER and by virtue of the powers contained in a certain assignment, which will be produced at the time of sale, there will be offered for sale by tender the $1,600.00 hardware stock of Messrs. Caley Bros., in the Town of Latchford, consisting of miners' and prospectors' supplies, hardware, paints, oils, glass, tools, notions, tinware and general shelf hardware, show cases, furnace, safe, etc., etc.

Tenders will be received by the undersigned up till Saturday the eighteenth day of January, 1908, and will be opened at the office of the undersigned in the Town of Latchford, on Monday, the twentieth day of January, 1908.

TERMS—Each tender must be accompanied by a marked cheque for twenty per cent. of the amount thereof, cheque to be applied on purchase money of tender, if it be accepted, otherwise to be returned to the tenderer, balance of purchase money to be paid in two equal instalments to be secured by paper bearing current rates of interest, acceptable to the Canadian Bank of Commerce, Latchford.

For further particulars and conditions of sale apply to

SCOTT, SCOTT & MacGREGOR,
Latchford, Ontario,
Vendor's Solicitors.

Dated at Latchford this 10th day of December, 1907.

MANITOBA HARDWARE AND METAL MARKETS

Corrected by telegraph up to 12 noon Friday, Jan. 3, Room 511, Union Bank Bldg, Winnipeg, Man.

While business still remains quiet, all prices are holding firm, and wholesalers are optimistic of a renewal of activity with the opening up of the new year.

Travelers who have been in the city during the holidays are again returning to the road, and the wholesalers anticipate a busy time preparing the many orders for spring delivery. Development of the country, means great building operations, and consequently, great increases for the hardwaremen, and the coming year gives promise of being a successful one from every standpoint.

The only quotable changes this week are declines in petroleum oils, and gasolenes. Linseed oil has taken a drop of five cents, and turpentine in barrel lots has declined ten cents.

Rope—Sisal, 11c per pound and pure manila, 15½c.

Lanterns—Cold blast, per dozen, $7; coppered, $9; dash, $9.

Wire—Barbed wire, 100 pounds, $3.25; plain twist, $3.40; staples, $3.40; annealed wire, $2.90 base, oiled, 10c extra; bright iron, $3.10 base; brass spring wire, 32c base; plain galvanized wire, 6, 7 and 8, $3.70; No. 9, $3.25; No. 10, $3.70; No. 11, $3.80; No. 12, $3.45; No. 13, $3.55; No. 14, $4.10.

Poultry Netting—Discounts are 50 and 5 per cent.

Horseshoes—Iron, No. 0 to No. 1, $4.65; No. 2 and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to No. 1, $5; No. 2 and larger, $4.75.

Horsenails—No. 10 and larger, 22c; No. 9, 24c; No. 8, 24c; No. 7, 26c; No. 6, 28c; No. 5, 30c; No. 4, 36c per lb. Discounts: "C" brand, 40, 10, 10 and 7½ p.c.; "M.R.M." cold forged process, 50 and 5 p.c. Add 15c per box. Capewell brand, quotations on application.

Wire Nails—$3.10 f.o.b. Winnipeg and $2.65 f.o.b. Fort William.

Cut Nails—Now $3.20 per keg.

Pressed Spikes—¼ x 5 and 6, $4.75; 5-6 x 5, 6 and 7, $4.40; ⅜ x 6, 7 and 8, $4.25; 7-16 x 7 and 9, $4.15; ½ x 8, 9, 10 and 12, $4.05; ⅝ x 10 and 12, $3.90. All other lengths 25c extra, net.

Screws—Flat head, iron, bright, 80, 10, 10 and 10; round head, iron, 80; flat head, brass, 75; round head, brass, 70; coach, 65.

Nuts and Bolts—Bolts, carriage, ⅝ or smaller, 60 and 5 per cent.; bolts, carriage, 7-16 and up, 55; bolts, machine, ⅜ and under, 60 and 5; 7-16 and over, 55; bolt ends, 52½; sleigh shoe bolts, ⅜ and under, 55; 7-16 and over, 45; machine screws, 60; plough bolts, 50; square nuts, cases, 2¾, small lots, 2¼; hexagon nuts, cases, 2¾; small lots, 2¼; stone bolts, 70 and 10 per cent.

Rivets—Iron, 60 and 10 per cent.; copper, No. 7, 36½c; No. 8, 37½c; No. 9, 38c; No. 10, 40c; No. 12, 43c. Assorted, No. 8, 38½c and No. 10, 41½c.

Green Wire Cloth—$1.75 per 100 square feet.

Coil Chain—¼-in., $7.25; 5-16, $5.75; ⅜, $5.25; 7-16, $5; ½, $4.75; 9-16, $4.70; ⅝, $4.65; ¾, $4.65.

Shovels—Discounts are 40 and 5 per cent.

Harvest Tools—50, 10 and 5 p.c.

Axe Handles—Turned, s.g. hickory, $3.15; No. 1, $1.90; No. 2, $1.60; octagon extra, $2.30; No. 1, $1.60.

Axes—Bench axes, 40 and 5; broad axes, 25 per cent. discount off list; Royal Oak, per doz., $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.50; Copper King, $8.25; Columbian, $9.50; handled axes, North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.75; Copper King, $10.50 per dozen.

Churns—45 and 5; list as follows: No. 0, $9; No. 1, $9; No. 2, $10; No. 3, $11; No. 4, $13; No. 5, $16.

Auger Bits—"Irwin" bits, 47½ per cent. and other lines, 70 and 10 per cent.

Blocks—steel blocks, 35; wood, 60.

Fittings—Wrought couplings, 55 per cent.; nipples, 70 per cent.; classified malleable fittings; 25 per cent.; malleable bushings, 50 per cent.; malleable unions, 55 per cent.

Hinges—Light "T" and strap, 65.

Hooks—Brush hooks, heavy, per doz., $8.75; grass hooks, $1.70.

Stove Pipes—6-in., per 100 feet length, $9.25; 7-in., $10.00.

Tinware, Etc.—Pressed, retinned, 70 pressed, plain, 75 and 2½; pieced, 25; japanned ware, 35; enamelled ware, Famous, 50; Imperial, 50 and 10; Imperial, one coat, 60; Premier, 50; Colonial, 50 and 10; Royal, 60; Victoria, 45; White, 70 and 5; Diamond, 50; Granite, 60 per cent.

Galvanized Ware—Pails, 37½ per cent.; other galvanized lines, 33 1-3 per cent.

Solder—Quoted at 27c per pound.

Wringers—Royal Canadian, $36; B.B., $40.75 per dozen.

Files—Arcade, 75; Black Diamond, 60; Nicholson's, 62½ per cent.

Locks—Peterboro and Gurney 40 per cent.

Building Paper—Anchor, plain, 66c; tarred, 69c; Victoria, plain, 75c; tarred 88c; No. 1 Cyclone, tarred, 84c; No. 1 Cyclone, plain, 66c; No. 2, Joliette, tarred, 69c; No. 2 Joliette, plain, 51c; No. 2 Sunrise, plain, 56c; Jubilee plain, 75c; Jubilee tarred, 88c; Buffalo plain, 66; Buffalo, tarred, 69c; Lion, plain, 55c.

Ammunition, Etc.—Cartridges, rim fire, Canadian, 50 per cent.; American, 33 per cent.; pistol sizes, Canadian, 25 per cent.; American, 5 per cent.; military, Canadian, 20 per cent. off. American 10 per cent. advance. Primers, $1.55. Loaded shells: English and Canadian makes, 12 gauge black soft, $18; 10 gauge, $22.50; 12 gauge smokeless, chilled, English, $24; Canadian, $23; 10 gauge smokeless, chilled, English, $28; Canadian, $27. Shot: Ordinary, per 100 lbs., $7.25; chilled, $7.65; buck, $8.05; 28 ball, $8.45. Powder: F.F., keg, Hamilton, $4.75; F.F.G., Dupont's, $5.

Iron and Steel—Bar iron basis, $2.70. Swedish iron basis, $4.95; sleigh shoe steel, $2.75; spring steel, $3.25; machinery steel, $3.50; tool steel, Black Diamond, 100 lbs., $9.50; Jessop, $13.

Sheet Zinc—$8.50 for cask lots, and $9 for broken lots.

Corrugated Iron and Roofing, Etc.—Corrugated iron, 28 gauge, painted, $3; galvanized, $4.10; 26 gauge, $3.35 and $4.35. Pressed standing seamed roofing, 28 gauge, $3.45 and $4.45. Crimped roofing, 28 gauge, painted, $3.20; galvanized $4.30; 26 gauge, $3.55 and $4.55.

Pig Lead—Average price is $6.

Copper—Plainished copper, 33½ per pound.; plain, 28½c.

Iron Pipe — Black pipe, ¼-in., $2.70; ⅜, $2.85; ½, $3.75; ¾, $4.75; 1, $6.75; 1¼, $9.25; 1½, $11; 2, $14.-80; 2½, $24.60; 3, $32.50; 3½, $40.50; 4, $46; 4½, $54. Galvanized: ¼ in., $3.-65; ⅜, $3.80; ½, $4.50; ¾, $5.80; 1 $8.40; 1¼, $11.40; 1½, $13.80; 2, $18.-40.

Galvanized Iron — Apollo, 16-gauge, $4.15; 18 and 20, $4.40; 22 and 24, $4.-65; 26, $4.65; 28, $4.50; 30-gauge or 10¾-oz., $5.20; Queen's Head, 20, $4.60; 24 and 26, $4.90; 28, $5.15.

Lead Pipe—Quoted at $7.25.

Tin Plates—I.C. charcoal, 20x28, box, $10; IX charcoal, 20x28, $12; XXI charcoal, 20x28, 14.

Terne Plates—Quoted at $9.50.

Canada Plates—18x21, 18x24, $3.50; 20x28, $3.80; full polished, $4.30.

Lubricating Oils—600W, cylinders, 80c; capital cylinders, 55c and 50c; solar red engine, 30c; Atlantic red engine, 29c; heavy castor, 28c; medium castor, 27c.; ready harvester, 28c; standard hand separator oil, 35c; standard gas engine oil, 35c per gallon.

Petroleum and Gasolene—Silver Star, in bbls., per gal., 20c; Sunlight, in bbls., per gal., 22c; per case, $2.45; Eocene, in bbls., per gal., 24c; per case, $2.60; Pennoline, in bbls., per gal., 24c; Crystal Spray, 23c; Silver Light, 21c. Engine gasolene, in barrels, gal., 25½c, f.o.b. Winnipeg, in cases, $2.60.

Paints and Oils—White lead, pure, $6.-50 to $7.50, according to brand; bladder putty, in bbls., 2½c; in kegs, 2¾c; turpentine, barrel lots, Winnipeg, 80c; Calgary, 97c; Lethbridge, 97c; Edmonton, 98c. Less than barrel lots, 5c per gallon advance. Linseed oil, raw, Winnipeg, 65c; Calgary, 77c; Lethbridge, 77c; Edmonton, 78c; boiled oil, 3c per gallon advance on these prices.

Who Caused the Panic?

(From the Wall Street Journal.)

Who caused the panic?

"Not I," said the President; "Not I with my Big Stick."

Who caused the panic?

"Not I," said Governor Hughes; "not I, with my gas, insurance and traction investigations."

Who caused the panic?

"Not I," said Rockefeller; "Not I with my methods of competition."

Who caused the panic?

"Not I," said Harriman; "Not I, with my transcontinental ambition."

Who caused the panic?

"Not I," said Morse; "not I, with my chain of banks."

Who caused the panic?

"Not I," said Ryan; "Not I, with my Metropolitan deals."

Who caused the panic?

"Not I." said Rogers; "not I, with my copper boom."

Who caused the panic?

"Not I," said Heinze; "not I with my bank and copper pool."

Who caused the panic?

"Not I," said the Promoter; "not I, with my inflated valuation, my rose-colored prospectus and my overcapitalization."

Who caused the panic?

"Not I," said the Speculator; "not I, with my manipulation."

Who caused the panic?

"Not I," said the Banker; "Not I, with my "Glad Hand" methods, my fierce competition for deposits, my payment of excessive interest, my lack of co-operation, and my hoarding of reserves when courage was demanded."

Who caused the panic?

"Not I," said the Politician; "not I, with my demagogic attack on corporations, and appeals to the labor vote."

Who caused the panic?

"Not I," said Graft; "not I, with my bribery and blackmail."

Who caused the panic?

"Not I," said the Southern Governor; "not I, with my 2-cent fare laws and contests with the Federal judiciary."

Who caused the panic?

"Not I," said Judge Landis, "not I, with my $29,000,000 fine."

Who caused the panic?

"Not I," said Real Estate Syndicate; "not I, with my farm 'just twenty minutes from City Hall' carved up in city lots."

Who caused the panic?

"Not I," said Mining Proposition; "not I, with my hole in the ground and press agent."

Who caused the panic?

"Not I," said Brisbane; "not I, with my editorials, preaching class hatreds in big capitals."

Who caused the panic?

"Not I," said the Sun: "not I, with my outrageous attacks on the mind and character of the President."

Who caused the panic?

"Not I," said Court Circular; "not I, with my fulsome and deceitful defense of the divine right of high finance to do as it pleases."

Who caused the panic?

"Not I," said Muck Raker; "not I, with my sensation."

Who caused the panic?

"Not I," said Currency; "not I, with my inelasticity."

Who caused the panic?

"Not I," said Treasury Surplus; "not I, absorbing the people's cash."

Who caused the panic?

"Not I," said Protective Tariff; "not I, with my excessive and discriminating taxation."

Who caused the panic?

"Not I," said Undesirable Citizen; "not I, with my disobedience to law."

Who caused the panic?

"Not I," said Prosperity; "not I, with my overdoing of things."

Who caused the panic?

"Not I," said Great Gold Production; "not I, with my lifting of prices and rates of interest."

Who caused the panic?

"Not I," said War, Pestilence and Earthquake; "not I, with my disasters costing billions of dollars."

Who caused the panic?

"Not I," said Luxury; "not I, with my automobiles and yachts, and lavish expenditures in excess of income, depriving the country of new investment power."

Who caused the panic?

"Not I," said Organized Labor; "not I, with my high wages and shorter hours, and lessened efficiency."

Who caused the panic?

"Not I," said Materialism; "not I, with my egotism and denial of faith."

Who caused the panic.

All of us; let us confess the truth and endeavor to mend our ways and to put our lives and houses in order for another advance in all that makes a nation really strong and true.

COURT FORBIDS LABOR BOYCOTT.

In the recent suit brought by The Buck Stove and Range Company, St. Louis, against the American Federation of Labor, involving the right of labor to boycott business houses which labor organizations regarded as "unfair" to them, an injunction has been granted prohibiting the Federation from continuing the boycott pending a final settlement.

The Buck Stove and Range Company run an "open shop" and the Federation has, through the use of thousands of circular letters and through the medium of their official organ, endeavored to prevent the sale of the Buck stoves.

The case will not receive its final hearing until the spring.

TO MAKE AN IDEAL PAINT

that will stand the trying weather conditions of Western Canada has been our object.

Stephens' HOUSE PAINT

is our attainment—it is right because

IT covers wears looks WELL

It is always in stock!

You would have no difficulty in proving this, by ordering at once any of the numerous shades. It is a paint that has become a favorite with hundreds of retailers, because it has always pleased their customers.

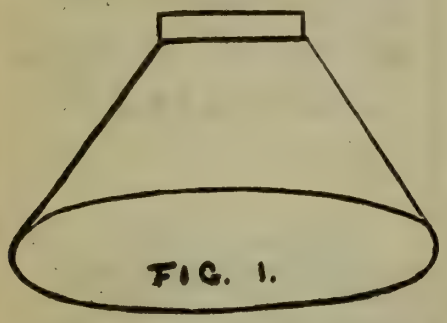
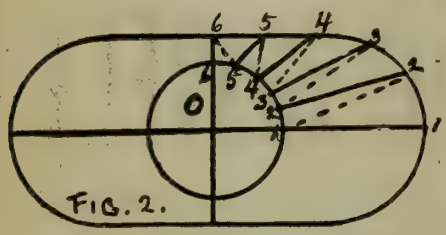
PAINT MAKERS



WINNIPEG and CALGARY

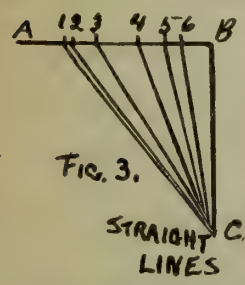
Cutting Patterns in the Tin Shop



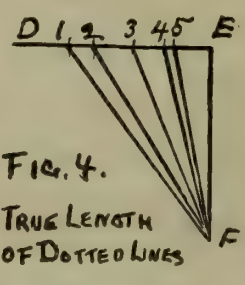
Readers of Hardware and Metal Are Requested to Make Use of This Department. Questions Regarding Patterns Will Be Answered by Experts Discussion is Also Invited on Any Matter Pertaining to the Tin Shop.

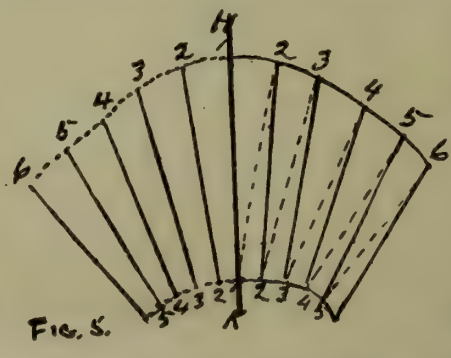
PATTERN FOR TIN PIPE.

In describing a pattern for a pipe that is round at one end and oval at the other let Fig. 1 be the given pipe and Fig. 2 the plan.



Draw the oval end of the pipe as in Fig. 2, and then a circle the size of the round pipe required in the centre of the oval. Divide the circle into any number of equal parts, as in the circle O, Fig. 2. Also divide the oval into the same number of equal parts, as there are in





the circle. Then draw the line 1, 2, 3, 4, 5, and 6. It does not matter how many spaces as long as it is an even number, but the smaller the spaces the truer the pattern will be.

Draw the line A, B (Fig. 3) and the line B, C, at right angles to A, B. Then lay out on the line B, C the height of the pipe required when finished "O."

Place your dividers in the line 1, 1, Fig. 2, and make B, 1 in Fig. 3 equal to 1, 1 and B, 2 equal to 2, 2, and B, 3 equal to 3, 3, and B, 4 equal to 4, 4, and

B, 5 equal 5, 5, and B, 6 equal 6, 6. Then draw lines from 1 to C, 2 to C, 3 to C, etc. Then draw the line D, E and E, F at right angles to D, E. Make E, F equal the height of pipe equal to B, C. Then place dividers at 1 to 2 in Fig. 2, on the dotted line. Then mark on the line E, D, from E to 1, then from 2 to 3 in Fig. 2. Then mark 2 in Fig. 4 from E to 2, etc., until you have the five dotted lines laid off on the line E, D, Fig. 4.

Draw the line H, K, in Fig. 5. Place your dividers at C, extending to 1 in Fig. 3. Then mark off on the line H, K, as 1, 1. Then place dividers at F, Fig. 4, extending to 1. Then place dividers at 1, Fig. 5, marking 2, 2 Fig. 5. Then at C, 2, Fig. 3. Then at 2, 2, Fig. 5. Then at F, 2. Then place dividers at 2, marking 3 in Fig. 5 and continued till all are completed. The distance between "1—," "2—3," etc., at H, must be the same as "1—,2" "2—3" in the oval Fig. 2, and the distance between 1—2, 2—3, etc., at K, must be the same as in the circle O. Then a line traced through these points will form half the pattern.

Edges must be allowed.

W. M. M.

CAUTION AND WATCHFULNESS NECESSARY FOR STOVES.

The Minnesota State fire marshall has issued a bulletin which describes the causes of, and careless practices which each year prove so costly to municipalities and individuals who are careless or ignorant of the correct and common sense methods of running the heating and cooking apparatus in their residences. Some of the information contained in the bulletin is not new, but experience teaches us that the commonest truths and warnings need to be constantly repeated. The bulletin says:

Failure to protect nearby woodwork from the heat of stoves ranks next to defective flues as a cause for fire waste. This loss in our state exceeds $175,000 a year, while the cost of sparks falling on shingle roofs as a result of carelessness in feeding or giving draft to stoves, is half as much.

Among heaters the cook stove sacrifices most property, and the gasolene stove most lives. The worst culprit is the cook stove which has no eight-hour day nor Sunday off. The gasolene stove causes a greater number of fires, but the loss is smaller by half because attention is attracted to them before they have time for a good start. The gasolene fire starting with an explosion sounds its own alarm, and, added to this, there is usually a cry of the burned, which summons immediate help.

The Wood Stove's Tricks.

The wood or coal stove often takes advantage of the absence of its general manager to fire something, usually the nearby woodwork. A stove is likely to ignite laths from which the plaster has fallen or a wooden partition within three feet. The danger signal is the browning of the wood, which occurs if the heat reaches 414 degrees Fahr. If the wall is protected by tin, zinc or sheet iron the stove may be placed within a foot. The metal to protect the wall must have a space behind it so that circulation of air will keep it cool. This may easily be secured by hanging the sheet of metal on screw hooks. The pipe is often the hottest part of the stove, therefore the metal to protect the wall should be run three feet above the stove.

Bright tin reflects heat better than any other metal. If the elbow of a pipe is within a foot of the ceiling sheet metal should be placed above it.

Bright Tin Best.

A wooden floor under a stove must have on it a sheet of metal extending a foot in front of the ash pan, and if wood is the fuel used the metal should extend that distance out under the stove door. All cold air entering the room falls to the floor and is drawn toward the stove, so an air space between floor and zinc is unnecessary. However, it is a very proper precaution to put a layer of one-eighth inch asbestos cloth under it, for it may have to catch some very hot coals.

Many fires occur from a clothes horse or chair holding clothing or laundry being placed too near a stove or grate, and a few from kindling put in a warm place over night to dry.

Kindling With Kerosene.

The newspaper accounts of many horrible accidents from using kerosene or gasolene to start a fire do not seem greatly to lessen the number burned in that way. Kerosene may be safely used for the purpose if the stove is cold or if the kindling is blazing. Heat without blaze converts it into gas, which will explode when a blaze starts. Gasolene so used is fearfully dangerous.

A parlor or bedroom stove should always have metal under it and if the wall is within eighteen inches it should be protected by sheet metal on one-eighth inch asbestos cloth. When covering a coal fire to keep it over night, remember that coal swells one-third while burning, so hot coals are likely to fall out of the open door or over the grate bar. Many houses were fired last year by drapery over grates and stoves igniting.

REVOLVERS MADE INTO A STOVE.

Municipal Judge Cameron, of Portland, Oregon, has collected a big batch of firearms, mostly revolvers of a cheap make, received from the hands of reckless persons who came before him. As it would, of course, be a questionable procedure to sell these at auction, the Judge is reported as deciding to have them melted and cast into a stove for use in the court-room.

CATALOGUES.

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

By mentioning HARDWARE AND METAL to show that the writer is in the trade, a copy of these catalogues or other printed matter will be sent by the firms whose addresses are given.

1908 Calendar.

The firm of Amoit, Lecours & Lariviere, hardware and plumber supply contractors, Montreal, have presented their friends with an annual calendar. The calendar gives views of the firm's headquarters in Montreal, is quite attractive, and will serve as a reminder for friends of this popular firm.

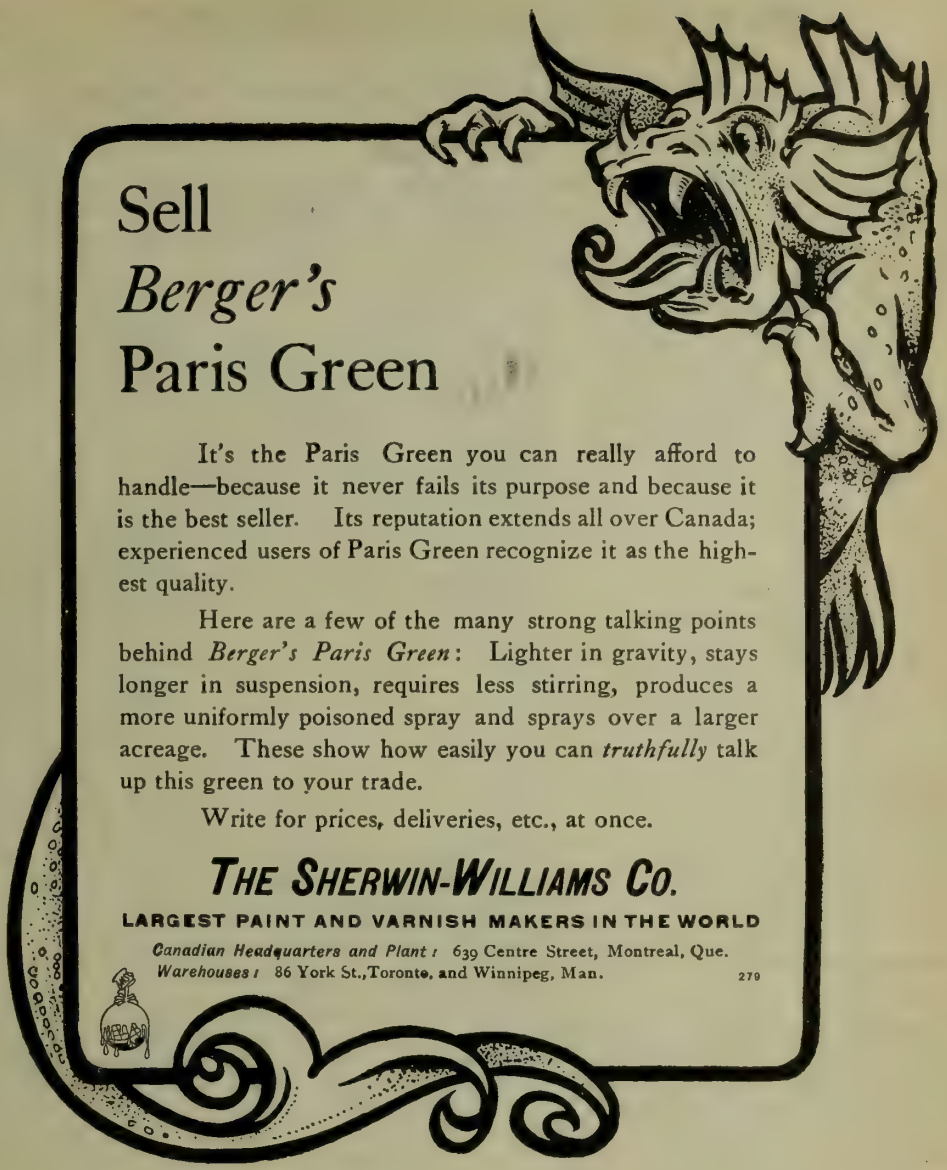
A "Striking" Calendar.

The Capewell Horse Nail Co., Toronto, have presented the trade with an attractive calendar, which is quite catchy. The scene shows a busy blacksmith shop with a young dandy in trouble as the result of sitting on a cooling shoe. In the foreground a number of cases of the Capewell horse nails may be seen. The calendar is attractive, as well as amusing, and should prove a good advertisement to the firm.

McClary's Jubilee Greeting.

The McClary Mfg. Co., London, have recently presented their patrons and friends with a card bearing on the face a half-tone of John McClary, president of the firm, and on the inside a message of New Year greetings. This is the jubilee Xmas of the McClary Mfg. Co.

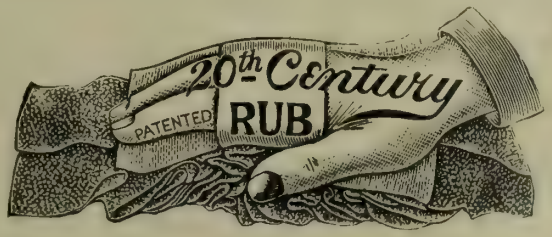
"Good Cheer" Greetings.



The James Stewart Mfg. Co., Woodstock, manufacturers of "Good Cheer" stoves and furnaces, have taken a novel method for wishing their patrons "A Happy New Year." A page of "Good Cheer," fastened to a book-shaped piece of cardboard by a piece of binder twine, has been brought into commission and is a novel as well as catchy method that should meet with the approval of all customers who receive a copy.

The Russell Auto.

The Canada Cycle & Motor Co., Toronto Junction, have published an attractive booklet of Advance Information about the "Russell" automobile. The book describes fully the important mechanism of the modern auto, and will be sent to any address by mentioning



Novel Match Box.

The Forsyth Manufacturing Co., Buffalo, N.Y., manufacturers of hardware specialties, remembered their customers with a novel nickel-plated match safe. Accompanying the useful gift were the firm's best wishes for a "Safe" and successful 1908 business. Readers who are not yet in touch with this firm's goods should send for one of the souvenirs, giving the firm's name and mentioning this paper.

CHAMOIS BRUSH.

The 20th Century Manufacturing Company, New York, is placing on the market the 20th Century chamois rub shown herewith. The value of the chamois for polishing and cleaning is generally recognized, but its use is subject to limitations because of the high price of the complete skins. It is put up in such shape that it will do fully as good work as the skins at only a small fraction of their cost. It is made of "trimmings," which are good-sized pieces of chamois, which would otherwise be available for watch pockets, knife cases, etc.—no hard, useless "scraps" being used. Twentieth Century "rubs" contain as much or more chamois as in a large skin and every piece is warranted the finest French oil tanned, sewed firmly on a back of canvas 6x5 inches, having a band, under which to place the hand, making it more convenient to use than the whole chamois skin—its flexibility conforming to the contour of the hand and of the article being rubbed. These goods are warranted against becoming hard or cracking through being wet, and are consequently useful for washing purposes. They will be on sale by dealers generally within a short time, and can now be obtained in whatever quantity desired by addressing the company. Circulars will be sent free upon request.

Know all about your line of stoves before you try to sell them. The manufacturer may have added some improvements which it is of vital importance for you to know.

Evolution of House Ventilation

E. D. Sidman, in Building Management.

The question of the proper amount of pure air, or ventilation for the human being is as old as human life itself, but up to within a few generations, the manner of living and the methods of building construction were such that artificial or rather mechanical ventilation was not necessary, except in a few instances, in which unknowingly our forebears provided as good a system of natural ventilation as could be devised, as many of the old buildings in London, Rome and other old cities will testify.

The question of pure air is practically the question of life itself, as no other single thing connected with our lives has so much bearing on the health, general welfare and longevity of the human race as this subject.

In the far ancient times when people lived almost entirely in the open air, sleeping in caves, scanty shelters of brush or in the open, doing their cooking over the open "camp fire," and depending on it for what heat that was necessary to sustain life, the people lived to a fabulous old age, notwithstanding the dangers and lack of care these primitive people had to contend with, and neither ancient history nor modern research shows any trace of their ever having any lung or throat trouble among them.

Next came the construction of buildings, mostly stone or adobe, loosely thrown together, guiltless of close fitting doors or windows, and either depending for cooking on the fire outside, or one made in the centre of the room with a hole through the roof to carry off the smoke for cooking, but the people still practically living in the pure open air.

Then some old "Wiseacre" conceived the idea of building a flue or chimney to carry off the smoke, and make the cooking and heating more convenient, and the open fire place was born, and the first and one of the best means of ventilation was erected, and while this old open fire place is not an ideal heating apparatus, for cheerfulness and as a ventilator to carry off foul air it has never been excelled.

Water Boiling Over Fire.

There was still another factor in the lives of these ancients that aided their general health and long lives, that is closely allied to heat and ventilation, namely, humidity, living in the open or at the best in loosely constructed buildings, they had at all times nearly the relative humidity that nature intended for them, and in the cold months when shut up at times as tightly as was possible in their poorly built houses, you would find pots of water simmering over the fire, and furnishing the extra humidity that was needed.

The question often arises as to who taught these people the need of humidity? Their system of ventilation was involuntary, and the benefits of it unknown to them, but to have a kettle of boiling water in a closed room was an acquired act, and one that has lasted among some people till this day, and for some kinds of heat is as good a means as could be devised to get humidity.

But we have only to go back a few years to see how the simple life in the open air prolongs life. A peep into the history of our own pioneers, shows that despite the awful privations and scanty fare that they were constantly subjected to, that these brave, pushing men lived to a ripe old age, and kept their faculties to the end.

Introduction of Stoves.

The next event in the evolution of heat, to the almost complete elimination of ventilation, was the stove, which is relatively speaking quite modern, a curious fact being that steam heat was used long before them, and on the stove gaining prominence receded until a few years ago.

The first American stoves were an oblong box, made of cast iron held together with bolts, long enough to take 3 or 4 foot wood (then the almost universal fuel) about 2 feet wide and high, mounted on four legs, with a door in front, sliding cover to an ash pan hearth, a small opening in the top at the rear for smoke pipe, and usually witha griddle hole in the middle of the top.

At this time it seems ludicrous to us that anything so simple as this old box stove should make such a furore and cause so much discussion as it did at the time it was invented, yet it is a fact that some people would never use them, claiming that if they were not possessed of the devil they were at least too unsafe to harbor. A verse from an old song published in the 50's entitled, "Twenty Years Ago," shows this feeling.

"Well do I remember that Wilson patent stove
That father bought and paid'ed for in cloth our gals had wove
And how the neighbors wonder'd when we got the thing to go
And swore 'twould bu'st and kill us all some Twenty Years Ago."

Poor Ventilation Causes Disease.

But the stove was there to stay, although at this period they were mostly used for heating only, the cooking and baking being generally done in the fire place or dutch oven, but when used you would generally find a kettle of water simmering away on the back of the stove. To see that this old box or the round sheet iron stove is still in evidence, it is only necessary to enter most any farm house in New York or the New England States where they still have wood to burn.

The stove filled a long-felt want, was modified and improved rapidly, and at the present time is heating a large percentage of our homes, and outside of the fire place, the writer knows no more cheerful sight than a glowing anthracite base burner on a cold and stormy night.

While the stove was and is useful, we might say necessary as a source of heat, it has had more to do with the spread of and development of tuberculosis than any one agency, from the fact that it was stoves that taught the people the desire for overheated rooms, both day and night with all its unhealthiness, and from the fact that 99 per cent. of the homes and buildings heated by stoves have no provision for ventilation whatever, except the doors and windows, and when they are opened, which is seldom together, they create such a draught as to do more harm than good, and the people hug the stove and breathe over and over an air almost devoid of humidity, and laden with carbon dioxide.

GERMAN TARIFF MATTERS.

A letter from Berlin to the New York Herald says reports from Washington published in several German trade papers to the effect that the modus vivendi with Germany would not be renewed after its expiration in the spring are being much discussed here. At the Boerse it was stated that a prominent diplomatist of the Foreign Department had expressed the view that Congress would not act on the demands of certain members who have repeatedy shown their unfriendy spirit toward Germany and who were now in favor of a new tariff providing an increase of from twenty to thirty per cent. on German imports.

I am informed that the views of the diplomatist are not shared by many manufacturers, who openly express fear that sooner or later a new tariff regulation not so favorable to Germany exporters will be adopted.

That American merchants and manufacturers who import German goods to the amount of many million dollars, entertain this fear of a new tariff regulation in the near future is shown by the fact that large conditional orders have been forwarded by them, despite the financial crisis in the United States. These men are paving the way for an immense movement of foreign products to American ports, to begin as the first signs of unfavorable action by Congress appear at Washington, when America would suddenly be flooded with German and Austrian goods which importers will bring into the country before the higher tariff goes into effect, as was done in 1893.

Therefore any action by Congress pointing to tariff revision would temporarily benefit German industries and relieve the general depression here, while it would again disturb the financial situation in the United States.

Members of the Boerse think that changes in tariff legislation should only be adopted in times of prosperity and that the present Congress should, therefore, postpone all action until normal conditions again prevail here and abroad.

BUILDING AND INDUSTRIAL NEWS

For additional items see the correspondence pages. The Editor solicits information from any authoritative source regarding building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories or foundries, railway or mining news.

Industrial Gossip.

Saskatoon expects to have the western headquarters of the Imperial Oil Co.

The Sawyer-Massey Co., Saskatoon, will erect an office and warehouse at a cost of $30,000.

The new iron blast furnace site for the smelting of the ore gathered in the Maritime Provinces will be at Bathurst N.B.

The Guelph Axle Works, Guelph, has closed down for a few days, to admit of the joining of a new brick chimney to the boilers.

The Wilson, Leslie Co., a recently formed company with a capital of $100,000, has obtained a charter for the purpose of building and operating elevators.

The Warner-Gibson Co. will start a new factory in Welland. The company expects to have its machinery installed soon and will manufacture agricultural implements.

Vancouver may have a tin plate industry in the near future. R. Jenkins, Morrisburg, has been negotiating with the council of Vancouver, and a $150,000 plant may be built in the spring.

Excavation for the new buildings for the Great Lakes Dredging Company, Fort William, has been started. The shops will be very large and will be fitted with the most up-to-date machinery.

The Champion Rivet Co., Cleveland, will locate a Canadian factory. It is probable that the new industry will go to either Windsor or Port Hope. It is expected the company will employ about 500 men.

Several mica mines in the Ottawa Valley have been forced to close, owing to the recent failure of American houses who purchased their product. In some cases stocks are being cleared off by auction.

The Frontenac Gas Company has started furnishing Quebec City with gas. The company is offering their product at $1 and have a service gang which they will keep for the accommodation of patrons during the winter.

A report from Sherbrooke, Que., has it that a number of valuable asbestos claims have been secured in that locality. Americans are interested in the development of the principal claims, which sold as high as $50,000.

The Canadian McVicker Gas Engine Co., Galt, an industry established in Galt over two years ago, and which was largely backed by F. Erichson Brown, barrister, Toronto, has gone into liquidation.

The Brass and Steel Goods Company, Belleville, have started operations in that city. The company has a fine brick building which at present is two storeys high, but which will likely be built up in the near future. The company has a capital of $150,000.

Bradstreet's review of Canadian trade for the year concludes with this cheerful passage: Although general trade at the close of the year inclined to be quiet, the outlook is, on the whole, cheerful. Money is rapidly working easier, vast sums are being spent on railway construction, and the roads are already in the market for large supplies of rolling stock. As has been said, 1907 has shown continued national growth although there was some reaction toward its close. Some such reaction was necessary after a long period of great prosperity and growth, and Canada will go ahead all the more rapidly after the breathing space afforded by a short period of retrenchment.

Building Notes.

J. S. A. Whealey, Toronto, will erect a stable and storage shed.

R. Stevens, Toronto, will build a house at a cost of $3,000.

J. Russell, Toronto, will build three brick residences to cost $12,000.

James Sargent, Toronto, will build two brick residences next spring.

T. A. Allan, Vancouver, will build a frame store at a cost of $2,000.

R. H. Pavell, Toronto, will build eight residences, at a cost of $5,000.

The Bank of Commerce recently completed a new $257,000 bank at Medicine Hat.

M. A. Barnett, Vancouver, will erect a tenement house in the spring, to cost $38,000.

Paris, Ont., is advertising for tenders for the erection of a new public school at that place.

Building permits issued in Montreal during 1907 reached a total of $8,403,129, a decrease of $236,000 on the figures of 1906.

H. Van Pagrell, Vancouver, will erect a business block in that city at a cost of $120,000. The building will be fitted as stores and apartments.

The Imperial Bank is contemplating alterations in their branch at Yonge and Queen Streets, Toronto. The cost will be in the neighborhood of $3,000.

The plans for Saskatchewan's new parliament buildings, at Regina have been approved of and tenders will likely be advertised soon. The buildings will cost in the neighborhood of $1,250,000.

Companies Incorporated.

Warner Gibson, Limited, has been incorporated with headquarters at Welland, to manufacture agricultural implements and vehicles. The company is capitalized at $40,000, and the provisional directors are: Charles Warner, T. T. Gibson, H. C. Plumley, Buffalo; C. H. Biddlecombe and Lydia A. Biddlecombe, Olean, N.Y.

NEW HORSE TIE.

Horse owners are often compelled to tie their horses rather close in the stall for fear of accident resulting by the animal's becoming entangled in a halter strap which is too long. A weighted hitching strap is now to be had, with which the animal may have a good deal of liberty without any danger of this trouble. It consists of a piece of pipe with means of securing it to the woodwork of the stall, and a roller at the top, over which the strap passes. A long weight slides up and down inside the pipe, and the end of the hitching strap is secured to it. The weight takes up all slack and the length of rope which it takes care of is sufficient to allow the animal considerably more freedom than if tied in the ordinary manner.

RECENT INVENTIONS.

W. F. Lorentzen, Havana, Cuba, has invented an apparatus for cooking by steam articles such as sugar cane seeds and other products. The object of the invention is to provide an extra large heating surface which increases the heat to a much greater degree, with an economical use of steam, than is possible with the usual steam heater.

J. D. Schmidt, New York, has invented a clothes line bracket which in operation is fitted to a window and its object is to hang out clothes without the operator's leaning out of the window, thus the danger of an accident from falling out is minimized.

MAKING MONEY SPROUT.

"High finance is not confined entirely to Wall Street," says John E. Wilkie, in the Saturday Evening Post. "I saw an example of it the other day that made me dizzy.

"One of the clerks in the treasury wanted to go to the ball game. He had but 25 cents, his exact admission, and nothing for carfare.

He announced he would raffle his 25 cents for 2 cents a share. Eighteen clerks took chances. One won the quarter for 2 cents, but the thrifty promoter had 25 cents for his ticket, 10 cents for carfare, and 1 cent over for an afternoon paper."

LETTING OFF STEAM.

Some officer had disobeyed or failed to comprehend an order.

"I believe I'll sit down," said Secretary Stanton, "and give that man a piece of my mind."

"Do so," said Lincoln; "write him now while you have it on your mind. Make it sharp. Cut him all up."

Stanton did not need a second invitation. It was a bone-crusher that he read to the president.

"That's right," said Lincoln, "that's a good one."

"Who can I send it by?" mused the secretary.

"Send it!" replied Lincoln; "send it! Why, don't send it at all. Tear it up. You have freed your mind on the subject and that is all that is necessary. Tear it up. You never want to send such letters. I never do."

THE MONTREAL ROLLING MILLS CO.

QUALITIES OF LIVE SALESMANSHIP

By L. A. Sears

I desire to say only a few words to our traveling salesmen. I cannot give all of you cards and spades on selling goods; I think some of you boys have already acquired a tact in approaching customers that is as successful as anything I can tell you. That capacity comes from the exercise of simple horse sense and sincere, honest dealing. If you go to people naturally, without any frills and state your business, they will take you as you are. There is just as much knowledge of human nature on the other side as on this side. Do not lose sight of that; do not think that you alone are a judge of human nature. The other fellow knows human nature just as well as you do. Be honest and frank with him. Be direct in telling your story and tell it in as few words as you can. If you do not suit him this time, maybe you will the next time. He will size you up. The fly is about as wise as the spider.

I desire to address myself principally to-day to some thought that I trust may be of interest to our managers as well as to our salesmen. In my study of this business I find that the manufacturing department can be divided into about three lines of effort. I know from what I have absorbed from the founding and history of this company that these goods we manufacture are calculated to be the best we can possibly produce. I consider that the very maximum of our ambition is the best. Of course, it is necessary to have quantity, it is necessary to have volume of business. Volume of business is as necessary after you have secured the quantity, as the quality. We cannot maintain the salary of our forces, we cannot maintain the expenses of this business, unless the volume of business is maintained and gradually increased, because expenses are hard to hold down. We cannot hold them down. These boys, as they go along in their efforts in life, must be advanced in position and salary, not only to show our appreciation, but also to put them on a footing where they will be satisfied. So it is impossible to run the business on a fixed expense. The expenses will grow, and the business must grow accordingly.

Three Propositions.

So, I take it, that first we must make the best goods we can produce.

Second, we must increase the quantity.

Third, we must make them cheap enough and sell them cheap enough to be in the battle along the firing line.

These are the three propositions. The manufacturing department must know they are in line, know they are producing good stuff and at the minimum expense.

The selling department of this business must know enough about conditions outside to be satisfied that we are getting all the conditions will warrant and selling the product in a reasonable volume, as compared with our capacity of producing. All of these things are collective and correlative; they must be hinged together, and we must be consistent in our efforts at both ends of the line.

The Best or Nothing.

The best is none too good. The best effort is none too good. If this business is not worth your best effort, it is not worth any effort. If it is not worth your highest degree of concentration, your highest brain capacity, your highest physical capacity when necessity requires, it is not worth anything. It is a failure to begin with; it is a failure before you start. If it is not worth your application to the last point of your ability to stand the effort, it is not worth anything. That is the measure of success. If you fail after giving it your unqualified effort, mental and physical, it is an honorable failure.

It has been said (and I think truthfully said) that "good enough is an enemy of the best." We should have that as our motto on the wall; we should stick that sign up in the same way as the "Don't spit on the floor" sign. "Good enough is an enemy of the best." When you think this over it expresses a whole lot of truth. Therefore, we never want to say, "This is good enough."

A business proposition stands on three legs, like a stool—Labor, Capital and Management. Labor it is not necessary to qualify. It does not begin and end with the man who cleans the utensils in the factory; it does not begin and end with the man in the office, who tries to look after things. It is the entire working force from beginning to end, nental and physical.

Capital is not necessarily the money in the bank, the resources of the business, or, what we consider as money, the implements in the factory and its equipment. Capital is the goodwill you produce; Capital is the amount of honesty and sincerity of effort you put into the business. You may not realize it, but honest, sincere effort is one of the groundworks of Capital. It is Capital, I want to tell you, and if you do not realize it you have a small idea of what your investments are and what your success will be. Every one of you boys not interested in this firm financially, but employed on a salary, with every day of honest effort, I want to assure you, you have made an investment in its Capital that will sooner or later be repaid. Every day and every week which you put into this concern in indifferent work is that much Capital wasted.

Management and Duty.

Management is not entirely confined to the people who sit in the office, to the people who assume to be head of the business because they are president or manager. They do not comprise the whole thing. They are apparently in control, and they may decide a question that someone has to decide; but the management is the whole working force, clear down the line to the man sweeping in the back alley. That is Management. Employes, from the people throwing off the goods into the receiving building up to the point where the goods are distributed to the consumers and getting the money back with which to pay your debts—all have something to do with the Management. If we do not have the co-operation, the assistance and loyalty of every single man along that line of effort, no Management is good enough, no head big enough to make the business successful. So I want you boys to feel that you are a big part of the Management of this business, and any suggestion, any idea, or any point which you may think of value, it is your duty to come to the recognized manager of this concern and advise him of it and give your reason for it. If you find a frail brother, who by lack of attention is injuring this business, it is your duty to tell the manager of this business. That is what I feel is your duty. There is but one road to success, and that is by constant vigilance and concentrated effort.

This ambition, which I have touched on before, is not entirely fixed on the money value of this business. We have always hoped to build up a business and make it a heritage to somebody who will be worthy of it. The young men and the old men connected with the business, whether they have acquired any stock or whether they are only working on a salary, should have it in their minds that it is their business and their heritage to some extent. They want to learn to say We. When you go to your customers, say We; do not say "my firm;" say We. I said we when working on $8 a week. I always said it. I would not work for any firm unless they would let me say We. I would not do it. I want to say We and feel as though "We are it." Make the business good and command the respect and attention due you. That kind of a spirit will make you We. If you keep at it, in honest and sincere work, we will make you a part of the business, if you want to be a part, and if you have not this ambition to become We in this business it is time you were going into the clergy or into some other business where you do not have to become a partner or member of a corporation in order to make a living.

ICE MELTING GUESSING CONTEST

A hardware store of Birmingham, Alta., advertised their refrigerators by means of a guessing contest. One of the refrigerators was put in a show window and in it was placed a 100-pound cake of ice. A valuable prize was offered to the person who should guess closest to the exact number of hours and minutes that would elapse before the ice was completely melted. Much interest was taken in the contest and more than 2,000 persons registered guesses. One hundred and five hours and eighteen minutes were required to melt the ice.

IS YOUR INVESTMENT PAYING?

Give much thought to your investment. Consider how much the money invested would earn if you had it in real estate mortgages. Then figure the additional return your investment ought to bring from merchandising with the additional risk over the real estate mortgage. At this time when merchandise is scarce it is too easy to increase the investment. Caution in buying is more necessary right now than at any other time because it is so necessary to buy a long distance ahead on staple lines. The only thing that can be done is to watch the investment carefully and cut the corners wherever possible.

Paint and Oil Markets

MONTREAL.

Montreal, Jan. 3.—Taking everything into consideration, 1907 was a prosperous year for the paint and oil trades. Business, if not of a record character, was well up to the average. As a matter of fact, it looked in April as if a bumper year was in prospect. An unusual burst of trade occurred then, and a state of congestion existed in the warehouses. But more normal conditions ensued in the following months, and the promise of April was not fulfilled. During June there was much complaint as to railway transportation. The difficulty was not so much in getting the raw material as in reshipping the finished products. This handicapping in the height of the season was exceedingly hard on the manufacturers, while to the dealers in many cases it caused actual loss. The railway authorities must make an effort this year to deal more promptly with the rush. The interests of the country demands that no line of industry in 1908, embarked as we are on an effort to retrieve the depression of last year, must be unnecessarily hampered or restricted.

The three great staple lines, ground white lead, turpentine, and linseed oil, have undergone various changes during the year, but only the last named left off with a margin to the good over the commencing price of the year. The decline in the pig lead market naturally had a bad effect on ground white lead, and this article finished up 50c below the January price. Turpentine was exceedingly bullish in the earlier months of the year, owing to the southern corner, and reached the high mark of $1, but in April the price broke, and since then the market steadily declined, finishing over 25c on the wrong side. Linseed oil went through various fluctuations from 55c to 69c, and eventually finished off 4c to the good.

Linseed Oil—Starting at 55c, this product remained steady until March, when an advance of 5c was made, owing to a duty of 10c per bushel being placed on flaxseed. By fluctuating movements the price reached high water mark for the year in June, with 69c, but dropped away again until November, with a slight rally in October. In November, seed dropped in price, the oil was marked down 62c, and gradually declined until at the close of the year it was 59c.

Turpentine—In the earlier months of the year, turpentine was very bullish, owing, as we said, to the corner in the South, and the price rose from 96c to $1, but abundant supplies came through in April, and from that time the price steadily but slowly dropped until it has now reached the 70c stage.

Ground White Lead—Ground white lead, but for the fluctuations in the pig lead market towards the end of the year, would have been the most consistent of the three in maintaining the price level. Starting at $7.25 for Government standard, there was a slight strengthening movement in July and again in October, but the fall in the pig lead market adversely affected prices, which, at the end of the year, were down to $6.75.

Red Lead—This line has well maintained its strength all through, and despite Old Country quotations, remained firm at the end of the year at $6. This was the starting price in January. There was a slight advance in July, but apart from that the market has been devoid of excitement.

Putty—This article has been in great demand, and prices have ben well maintained. The opening figure of $1.75 has been very little departed from, and this price still obtains. There was a stronger tone in July, but this was not maintained.

Dry White Zinc, White Zinc Ground in Oil, and Varnishes, have suffered very little change. Both the zinc lines have maintained the opening prices, in the one case 7½c and in the other 8½c, with astonishing firmness. Shellac has not fluctuated much, and varnishes have well maintained their strength in consequence.

TORONTO.

Toronto, Jan. 3.—The last week of the year is also the dullest with the paint jobbers. The demand is dead for the present, with little or no orders of any kind coming in. For the last month the market has been quiet, but prices in all important factors have been firm. With the advent of the New Year the outlook for business is considered bright though some firms do not expect to put their travelers on the road until the end of the month, the majority will start out at once. As the travelers have all been in for the past two weeks, sorting orders for part barrel lots have alone been received by the local firms. Stock-taking is about over with now, and the jobbers in this district are well satisfied with the business of the year. No changes have livened the market during the past week.

Linseed Oil—The market is firm and the demand slow, though a number of orders of some magnitude have been received during the past few days. We quote: Raw, 1 to 3 barrels, 60c; 4 barrels and over, 59c. Add 3c to this price for boiled oil f.o.b. Toronto, Hamilton, London, Guelph and Montreal, 30 days.

White Lead—There has been no further drop in the price of white lead since December 20. The demand is slack at present, but will undoubtedly pick up in the near future. Some small orders of the sorting variety alone are arriving. Quotations remain unchanged: Pure white lead, $6.75 to $6.90; No. 1, $6.50 to $6.75.

Red Lead—Red lead remains unchanged in price. The demand is slack at present and dealers are only buying for immediate requirements. Genuine in 500 pound casks is quoted at $6; ditto, in 100-pound kegs, is $6.50.

Turpentine—Like linseed oil and white lead, the turpentine market is dead and uninteresting at present. The price remains unchanged and will likely remain at 70c until the new crop is marketed.

FOR TOWN . . . . . AND COUNTRY TRADE . . . . . THERE ARE NO SPECIALTIES AS POPULAR AS THOSE MANUFACTURED BY THE CANADA PAINT COMPANY, LIMITED.

"FAMILIAR," TO EVERY ONE, AS "HOUSEHOLD WORDS," THE CANADA PAINT COMPANY, LIMITED

The prices quoted are: Single barrels, 70c; 2 barrels and up, 69c, f.o.b. point of shipment, net 30 days. Less than barrels, 5c advance on these prices. Varnish turpentine is still quoted at 64c to 65c.

Petroleum—An average demand at present exists, but the market is quiet and uninteresting. Quotations are unchanged. Prime white, 13c; water white 15c, Pratt's astral 15c.

Glass and Putty—The demand is dull, though some glass is moving. There is no change in quotations.

A Paint Catechism

By G. B. Heckel.

43. What are the Carbon Blacks? The carbon blacks are practically pure carbon. They comprise lamp black, a specially prepared soot from oil lamps; gas blacks (commonly known as "carbon blacks") from natural gas; and graphite, a natural product, now also produced artificially.

Bone-black, ivory black (a fine bone-black), drop black, vine black, etc., also come in this category. These, being produced by carbonizing animal and vegetable substances, contain proportions of inert mineral salts and are accordingly modified in tone.

44. What are the characteristics of the Carbon Blacks? With the exception of those named in the last paragraph, they are practically pure carbons. They are, therefore, absolutely inert. Lamp blacks and gas blacks are amorphous, the particles are extremely fine and their specific gravity low; consequently they require a surprising preponderance of liquid to fit them for use. Their covering capacity in proportion to weight is enormous and their durability is a striking example of the durability of inert pigments in general when used in painting. Their tinting power is great. They are seldom used alone as pure color, it being deemed technically advisable to grind with them such a proportion of colorless inert pigment as will measurably increase the thickness of the paint film without perceptibly impairing its opacity.

Lamp black lettering on old signs has been frequently known to stand out in relief after the wood surrounding it has been deeply worn away by the elements.

Graphite, among the carbon pigments, stands apart, its unctuous quality, familiar in stove polish and lead pencils, distinguishing it. It comes in two forms—flake and amorphous. It is as durable as the other carbons and like them, is frequently ground with silica or other colorless, inert pigments. Its chief use is in protective paints for metal surfaces.

The remaining carbon blacks are used principally as tinting colors only.

45. What are the Drying Oils? Linseed oil, poppy seed oil, nut oil, China wood oil and sun-flower seed oil. The first-named is very extensively used, the second two in artists' colors and some special paints where extreme whiteness is essential, the fourth is coming into favor for certain lines of paint and varnish. The last-named has been used in this country experimentally only.

To these should be added certain semi-drying oils, such as corn oil and cotton-seed oil.

46. What are the Characteristics of a Drying Oil? Drying oils have the peculiar property of absorbing oxygen and forming a tough elastic substance. They harden (with the exception of China wood oil, which seems to "set" simultaneously throughout, like cement) from the surface inward. Certain metallic oxides and salts when incorporated with these oils by heat or otherwise, by acting apparently as carriers of oxygen, hasten the drying process. On exposure the hardening progresses slowly until the material finally crumbles and disintegrates. The added metallic salts, etc., are known as "driers," the oil in which such driers have been incorporated as "drying oils" and if incorporated by heat, as "boiled oils." A strongly concentrated drying oil thinned with a volatile oil (turpentine, benzine, etc.) is also known as "drier." and sometimes, especially if a gum or resin be added to it, as a "Japan drier."

ANTIMONY PAINTS.

A use of antimony which shows at present some degree of growth is its use as a pigment. It is now used in France, Germany, and Italy, and its use is stated by current trade papers to be encouraged by the Governments of France and Germany. The oxide makes a white and the sulphide a red paint. It is claimed that it is not poisonous, as is lead when used in paints, and to be more permanent and sunproof than zinc paint. The largest dealers in antimony in the United States, however, after investigation of the use of antimony pigments, did not find it desirable to enter into this branch of the business, and such pigments remain practically unknown upon the American market, with the exception of the chromate which, under the name of "Naples yellow" is used as a fine artist's color. Naples yellow and some of the oxides are used as ceramic colors.

DRIERS FOR FLATTING VARNISH.

Flatting varnishes are made from the hardest copals only, those belonging to the dammar group being quite unsuitable, and the driers employed consist of manganese resinate and borate, calcium borate, zinc sulphate, lead acetate and litharge. These may be incorporated with the varnish in four different ways. (1) The use of driers in the form of resin preparations, which often contain only about 10 per cent. of active metallic resinates, is inadvisable since in order to dry anything like quickly the varnish must contain 15-25 per cent. of pine resin (calculated on total copal content). The method is, however, very simple, the resin preparations being simply poured into the hot solution of copal in linseed oil, and followed by the

wish their friends and customers A Happy and Prosperous New Year, 1908

LET US GET YOUR EAR A MINUTE, MR. PAINT DEALER

We have a suggestion to offer that has paid others well, and will pay you well if you'll act upon it.

Martin-Senour Paint makes money for dealers, because as soon as they start handling it the powerful advertising organization behind it begins working for their interests.

Now, why not get in line for more trade and more money by handling

MARTIN-SENOUR PAINT
100 Percent Pure

We don't stock up dealers and then leave them to unload as best they can. Our policy is to give every possible assistance in moving the goods. Do we succeed? Just ask any of the dealers. If you would like to know how it's done, and our plan for hustling the goods off of your shelves and making your store the headquarters of the first-class paint trade in your locality, sit down right away and write for our special agent's proposition. It will cost you only a penny, and may bring you many dollars. Write today.

The MARTIN-SENOUR CO., Ltd.

The Highest Quality Paint
that can be manufactured.

It means that that paint is what your customer wants, and that by giving him what he wants, when he wants it, you are making a good commission for yourself.

Give our line a trial, you'll not regret it.

Eight hours is all that is necessary for the ***"Island City"*** brand of ***Floor Paints*** to dry.

Our Travellers get all the credit of orders sent in from their ground.

P. D. DODS & CO. - MONTREAL

VANCOUVER TORONTO WINNIPEG

addition of oil of turpentine. These resinous varnishes also clarify more quickly than pure copal varnish, the filtered varnish being ready for use in about 8-14 days after making. The great drawbacks of the method are, for either the varnish dries slowly, taking about 8 hours in summer and 12 in winter, and the flatted coating sweats and looks glossy, or else it dries quickly on the surface, leaving the under portion soft so that it rubs off in flatting. (2) The use of solid driers (litharge, manganese borate, etc.), is seldom resorted to since it gives a dark product, whereas very pale varnishes are demanded by consumers. (3) A better method is to employ liquid driers low in resin, or else anhydrous lead acetate in the solid form. The latter drier dissolves in the varnish at a temperature of 14-150 C., so that there is little risk of darkening the color, though an excess of acetate endangers the thorough drying of the varnish, since the formation of lead soap is independent of the action of atmospheric action and an excess of this soap robs the varnish of its flatting properties. When liquid driers are used, the varnish must be left for some time for the deposit to settle down, before filtering, the process of clarification taking 2-4 months. (4) The best method of all is to add the driers, in the solid form, after the varnish is made, and diluted with oil of turpentine. Of course in this case the influence of atmospheric oxygen must be called an aid. The finished varnish is placed in an open round bottomed iron trough, together with the solid driers (e.g., litharge and anhydrous zinc sulphate), and stirred up with a paddle (reaching to the bottom of the trough) to expose the mixture to the air. The varnish becomes viscous and must be thinned to standard. Clarification takes 3-4 months.—Farben Zeitung.

THE VALUE

of a paint is in the quality of finish and wearing results it gives.

IMPERIAL BARN PAINT

looks so well, and wears so well, on either wood or iron, we could easily charge more for it, and still our agents and their customers would consider it excellent value.

THE CHEAPEST and best cheap paint offered to the trade. Wears on the job, not off.

NEW LEAD CORRODING PLANT.

The large new corroding plant and paint and dry color factory of Brandram-Henderson, Limited, situated at the town of St. Louis, Montreal, is now nearing completion, good progress having been made on the buildings this season.

The area of Brandram-Henderson's property is 153,000 square feet, with a track frontage of about 1,000 feet, directly on the main lines of the C.P.R. The site of these new works is about half a mile from the Mile End Station.

The main building, which is to contain the lead corroding plant and the paint and dry color factory, is 300 feet long by 150 feet wide, and is constructed of pressed brick with grey stone trimmings, the architectural design presenting a very handsome appearance. The floors are of reinforced concrete and the building generally, of solid brick and steel, being practically fireproof.

The power to operate these works consists of a 250 h.p. Robb engine, 2 boilers and a high-speed electric light engine of 75 h.p.; these are now in transit. The boilers are to be equipped with Jones underfeed stokers, which are already at the works. The power house is a substantially built structure, 40x80 feet, and besides the engine and boiler rooms, includes a well equipped machine shop. This building is ready for roofing.

The round smoke stack is completed. It is somewhat over a hundred feet high and is a conspicuous object for some distance. An artesian well to furnish water supply for the factory is now being drilled.

At the southern end of the property Brandram-Henderson are building six convenient flats for employes' occupation. These flats are approaching completion, and will be available about the first of January.

Although building operations have been delayed considerably in Montreal this season, owing to unfavorable weather and scarcity of labor, Brandram-Henderson, Limited, expect to have the plant in operation in plenty of time for the season of 1908.

TO BOOM ST. JOHN INDUSTRIES.

The Board of Trade of St. John, N.B. has recently issued a booklet calculated to develop an interest in the commercial and manufacturing possibilities of this bustling eastern city. Typographically, the book is beautiful and altogether it is the equal of anything of the kind we have seen. The illustrations, which are excellent, as well as profuse, show the city's harbor, wharves and shipping facilities, municipal buildings and the extensive manufacturing concerns already established.

Have you displayed a stove in your window this year? An effective display can be made with the accessories alone. Coal hods, pokers, stove pipes, dampers, polish, registers and collars may be tastily arranged and are in demand at this time.

The Right Paint at the Right Price is

NEW ERA PAINT

Although the price of New Era Paint is quite moderate and calculated to appeal to your customers, the quality is there all the same. It cannot be beaten for space covering and long life by any paint on the market.

Mistakes and Neglected Opportunities

MATERIALLY REDUCE THE PROFITS OF EVERY BUSINESS

Mistakes are sometimes excusable but there is no reason why you should not handle Paterson's Wire Edged Ready Roofing, Building Papers and Roofing Felts. A consumer who has once used Paterson's "Red Star" "Anchor" and "O.K." Brands won't take any other kind without a lot of coaxing, and that means loss of time and popularity to you.

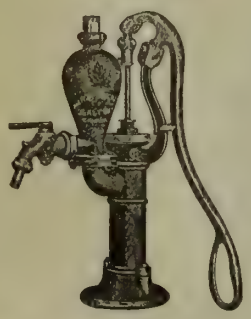
"Seeing is Believing"

¶ As the Ross Sporting Rifle represents the best in modern rifle manufacture, the highest grade materials and minute accuracy in workmanship, it is to your interest to learn fully about this Canadian Rifle—

¶ The Ross Straight Pull 303 Sporting Model M is one of our leaders to retail at $26. The barrel is the celebrated Ross high pressure, non-fouling, gun-barrel steel — The breech action is dependable.



Our representatives are now demonstrating the merits of this rifle—It places you under no obligation to drop us a line to make sure you will be on their calling list.

Our advertising policy is co-operative.

THE ROSS RIFLE CO., - QUEBEC

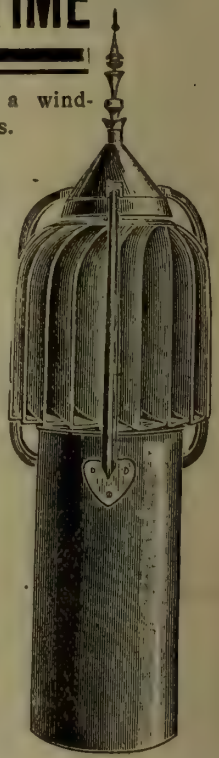
Hardwareman and Plumber

We have pumps suitable to any demand made upon you by most exacting customers.

Our pumps will do anything that a pump can do, and we will be pleased to give the benefit of many years' experience to any one having pump troubles.

McDougall Pumps are Standard Pumps, and with us it is quality first, last and always, while we ask just as little money as we can get along with.

We have a few catalogues for distribution.



The
R. McDougall Co., Limited
CALT - CANADA

WORKS ALL THE TIME

Some ventilators will work only in a windstorm that spoils their effectiveness.

AEOLIAN VENTILATORS

are so skilfully constructed and so nicely balanced that they are driven, not only by the slightest current of air, but by the difference in temperature within and outside the building.

St. Peter's School,
Montreal, June 1st, 1903.
Messrs. The J. W. Harris Co., Limited :
Dear Sirs,—
In answer to yours of 3rd inst. in connection with your system of ventilation which you have placed in the Brothers' House, in the School, etc., I beg to state that we are getting the greatest satisfaction we may desire.
Brother Jordanus, Dir.

Your Boiler Business

can be very materially increased by handling

"SOVEREIGN" BOILERS

They are the boilers which embody everything that's correct in a house-heating boiler. It is a fact vouched for by scores of pleased users—that more heat can be generated from less fuel in the "Sovereign" Boiler than in any other boiler in the field. The construction of the "Sovereign," showing in detail its points of perfection, is fully explained and illustrated in our free booklet ***"Simplified Heating."*** Send now for a copy.

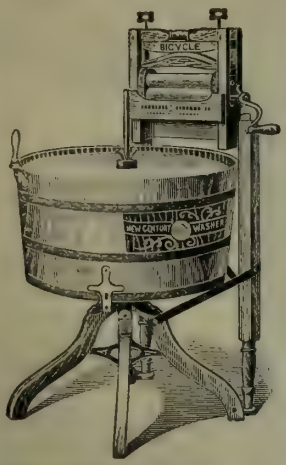
GEM FOOD CHOPPER

A modern household utensil that is needed in every kitchen. Carefully made, nicely tinned, self-cleaning, shelf-sharpening. It has steel cutters, and is made in four sizes.

No. 16	**capacity**	**1 lb.**	**per minute**
No. 20	"	**2 lbs.**	"
No. 22	"	**2½ lbs.**	"
No. 24	"	**3 lbs.**	"



Gem Food Choppers chop all kinds of Raw or Cooked Meat, Fish, Clams, Oysters, Vegetables of all kinds, Fruit, Bread, Crackers or Cheese, and many other articles used in making substantial dishes and dainty desserts. It is more useful than a chopping bowl and a great deal handier. It may be easily clamped to the kitchen table and is ready for use whenever needed.

TORONTO.

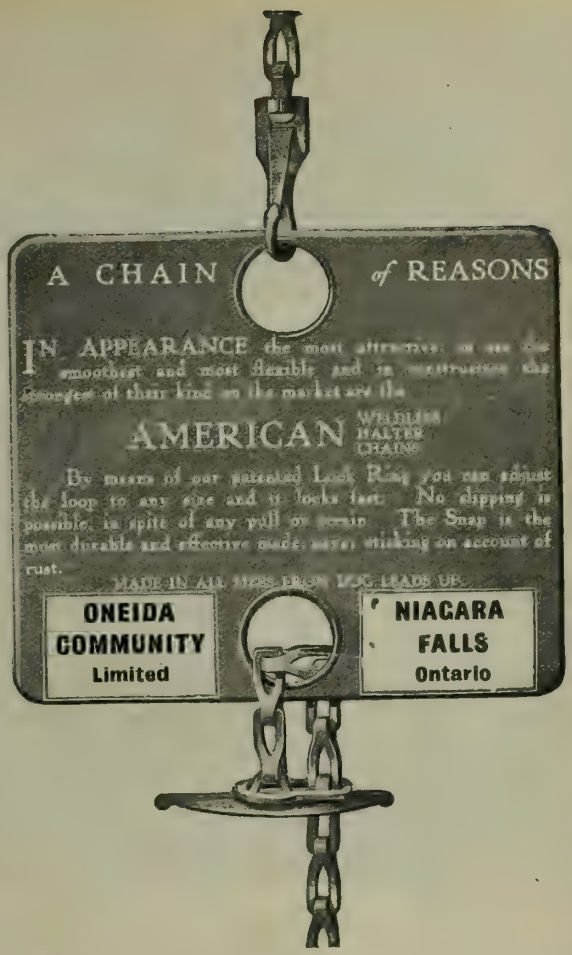
Something You Ought to Be Selling

The New Century method of washing has succeeded, not because of its ease, speed and simplicity only, but because it gives better results than are possible with any other method.

This machine has a wringer stand too, not a rickety affair, but a convenient, strong, rigid attachment, always in position, never in the way.

New Century Style "B"

The experience is in the machine. You'll hear no complaints of it and have no excuses to make.



They are the best there is.

Dealers, don't load up with experiments, it is a losing game

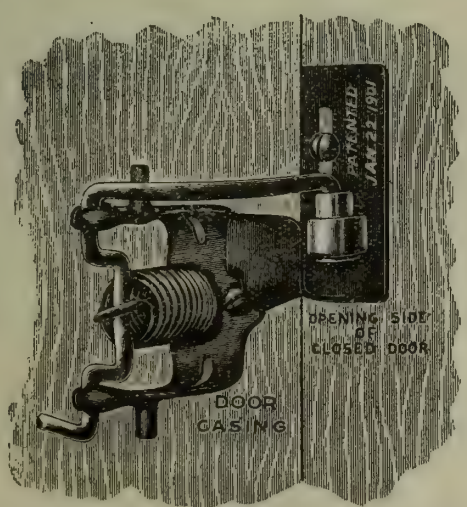
SCREEN DOOR HINGES

Between seasons it is well to look ahead and make your purchases, so that you will have the Goods when they are called for. We offer this week three staple lines and you would be well advised to get our prices before making purchase of your supplies.

OUR SALES

No. 7 3-in. cast Iron, Japanned
"HOLD BACK"



No. 80, 3-in. wrought Steel Japanned can be quickly removed from the door by slipping out the small pin.
"HOLD BACK"

08 Spring Hinge is double that of any other Jobber in CANADA, this is not talk but facts, get our prices and this will explain the reason why.

WE CAN FILL YOUR ORDER FOR A DOZEN OR A CARLOAD.

Mallory's Automatic Door Clasps

A simple but useful contrivance for closing either right or left hand doors without the use of the hand, especially designed to keep closed screen doors which are warped or sprung and for the prevention of doors being blown open by draughts.

Prevents the rebounding of doors and entirely does away with the Latch, and the Hook and Eye.

Can be used successfully on refrigerator doors, etc., as well as outside doors.
AUTOMATIC, Japanned steel frame and spring, bright steel lever.

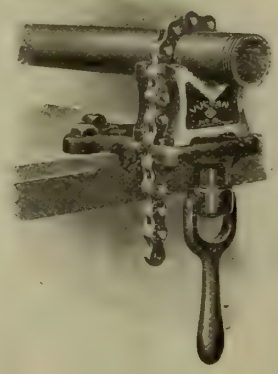
WE HAVE A VISE FOR EVERY PURPOSE

Parker's Swivel Base

PARKER'S



Solid Jaw, Swivel Base

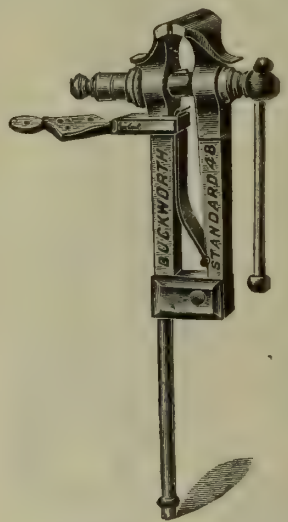
This vise is made with a solid steel strengthening Bar.

With this strengthening bar a means is formed that overcomes a weakness in many vises and strengthens the slide where breakage is usually most frequent.

The vise slide in this vise is practically unbreakable.

The steel face on this vise is milled and fitted to the jaw and is renewable. Made also in stationary style.

Vulcan



VULCAN

Folding Pipe Vise

Drop forged steel chain Vise for pipe $\frac{1}{8}$" to $2\frac{1}{2}$".

Size folded, 6 x 8 x 8". Weight 10 lbs.

A Splendid Vise for Outside or Jobbing Work

Blacksmiths'

BLACKSMITHS'

Wrought Leg Vises

Solid Wrought Boxes, Steel Jaws, Lathe Cut Screws. We have these Vises in stock from 35 lbs. to 200 lbs.

We stock extra Screws and Boxes.

LIMITED

MONTREAL, - CANADA

GALVANIZED IRON

Our trade in Galvanized Iron Sheets is a large section of our business. We carry big stocks and wide ranges of sizes and gauges. Orders for spring delivery should be placed now so that shipments may be made with the opening of navigation or the inauguration of summer freight rates.

Ask our travellers for prices, or write Montreal or Winnipeg.

Our stock includes the following brands, sizes and gauges:

"QUEEN'S HEAD"

Famous for its working qualities, finish, flatness and even weight.

72 x 24 in. x 24, 26, 28 gauge.
72 x 30 in. x 16, 18, 20, 22, 24, 26, 28 gauge.
72 x 36 in. x 22, 24, 26, 28, gauge.
96 x 24 in. x 26, 28 gauge.
96 x 30 in. x 24, 26, 28 gauge.
96 x 36 in. x 24, 26, 28 gauge.
120 x 30 in. x 28 gauge.

"COLBORNE CROWN"

Our own brand. It has an established reputation for high quality.

72 x 30 in. x 24, 26, 28 gauge.
96 x 30 in. x 24, 26, 28 gauge.
96 x 36 in. x 24, 26, 28 gauge.

"APOLLO"

The best American iron, heavily coated, flat and of uniform gauge.

72 x 30 in. x 16, 18, 20, 22, 24, 26, 28 gauge and 10¾ oz.
72 x 36 in. x 24, 26, 28 gauge and 10¾ oz.
96 x 24 in. x 28 gauge and 10¾ oz.
96 x 30 in. x 20, 22, 24, 26, 28 gauge and 10¾ oz.
96 x 36 in. x 24, 26, 28 gauge and 10¾ oz.

We can also fill at any time orders for a great variety of weights of black and tinned steel sheets, and tin and terne plates.

MAKE YOUR OWN LIGHT

IT'S CHEAPER AND BETTER.

"S. S." GAS LIGHTING MACHINES

A Few Points of Superiority based on Comparisons let US tell YOU about the others.

MODEL E MACHINE

OUR No. 1 SINGLE ARC
500 Candle Power

OUR No. 3 SINGLE ARC
500 Candle Power

OUR No. 2 SINGLE ARC
500 Candle Power

THE "S.S." GAS LIGHTING MACHINE—The only gas machine that runs without pumping under a uniform pressure. The only gas machine that will successfully operate one gas fixture if desired. The only gas machine that can be generated in thirty seconds and without the use of alcohol or liquid gasoline. The only gas machine with a safety vent and escape pipe. The only gas machine with an automatic governor. The only gas machine with a seamless generator and the only one with an entirely seamless copper tank.

THE "SYLVESTER" LIGHT—Increases the brilliancy 100 per cent. Decreases the operating cost 50 per cent. No globes to break or clean. No mantles dependent on wire or magnesian supports. Less heat than an electric arc and gives more light. No odor from unburned gas or the products of combustion. No sound from the light, absolutely noiseless. No shadows cast, all light thrown down. No flickering, the only steady light upon the market. A gas fixture more ornamental and unique, has never been invented.

Not one drop of oil passes through a hollow wire. We can give you cheapest insurance.

THE "SYLVESTER" NEW PROCESS MANTLE. Shipped in an envelope. Upon removing from envelope, can be crumpled up without danger of breaking. When straightened out, it's just as good as new.

THE ENGINEER DEMANDS

HARRIS HEAVY PRESSURE BEARING METAL

The Babbitt Metal in Round Ingots

The best selling hardware Babbitt on earth. It brings repeat orders. That's what pays. Scientifically alloyed from purest raw materials, and guaranteed to stand and wear well. Will not crack, or beat out in bearings. It is perfection in Babbitt.

THE CANADA METAL CO., LIMITED

TORONTO

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines These enquiries come from Wholesalers, Manufacturers and Retail Dealers, who usually intimate they have ooked through Hardware and Metal, but cannot find any firm advertising the line in question. In the majority of cases these firms are anxious to secure the information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay them to advertise in larger space.

Canadian Sportsmen Have Judged the Case of Imported Ammunition vs. Dominion

The Canadian Public in 1907 rendered their verdict in favor of Dominion Ammunition.

The successes achieved by Dominion Metallics have been followed by the notable successes of Dominion Loaded Shells in 1907.

Crown, Sovereign and Imperial Shells have become so popular that a whole new plant has been arranged for their manufacture.

Canadians have judged them by the standard of quality. Their sale has increased by such leaps and bounds that we have had to build an addition to our factory—a solid stone permanent building, 500 feet long, which speaks for itself.

The verdict is unanimous.

If you want to keep in the fore you must have a full range of Dominion Ammunition for 1908.

If your jobber won't supply you, write us

Dominion Cartridge Co., Limited, Montreal

The Following Testimonial Reached Us Absolutely Unsolicited

Merivale, Jan. 4th, 1908.

The Capewell Horse Nail Co., Toronto, Ont.:

Dear Sirs,—I received your calendar all O.K., thanking you. Might say that I have been 40 years driving horse nails and I was the first man that sent for them in this section, and since I drove your first nail, I have never driven any other make. I only wish that I had got them 25 years ago.

I could drive your nails at night without a light as safely as I could other makes in day time.

There is no second place for a Capewell Horse Nail.

I have driven tons of nails and know what I am talking about, and I think other smiths are thinking the same thing that I am, for no matter where I go, it is your nail they are using.

Since I have commenced to use your nails I have not had one man say that his shoes did not stay on long enough, so there is perfect satisfaction in them.

I have been induced by other makers to try their nails again, but while I drive nails and you make nails, I will stand by you.

Wishing you a Happy New Year, I remain, Yours Truly,

(Signed) J. W. SLACK, Blacksmith, Merivale, Ont.

THE CAPEWELL HORSE NAIL CO.

WINNIPEG, TORONTO, VANCOUVER

Bright Outlook for Coming Year

Optimism the Keynote of Many Letters and Interviews on the Prospects for the Hardware Trade in Canada for 1908—Talk Prosperity and Inspire Confidence Amongst the Croakers who have become Frightened by Pessimistic Reports in Sensational Newspapers.

Confident belief in the trade prospects of Canada for the year that has just opened is generally expressed by manufacturers and jobbers. No man, however much he may be inclined to look upon the dark side of things, and to magnify a passing thunderstorm into an equinoxial gale, can peruse the opinions which we publish in this issue, without perceiving that apprehensions as to the future are utterly uncalled for. Optimism is the key note struck by those, who, from the nature of their position are best qualified to give an opinion—and optimism is the tone which will lift the country above that pitch of depression which the timorous ones would strike. Because Canada has felt the reflex of a panic in the United States, because her banks, for good reasons of their own, have curtailed the circulation of money, because crops went bad for one season in some parts of the country, because the whole naturally created a reactionary tendency from which no country is exempt, that is no reason why fears should be expressed as to what will be the outcome of 1908.

An old saying tells us that "in trouble to be troubled, is to have that trouble doubled," and this is essentially so in the case of trade panics, to which a young country is more susceptible than an older one, on account of a lack of experience in those commercial fluctuations which from time to time must beset the most prosperous. Canada in her latter years of great trading progress had forgotten what depression was like. Her course had been set by so steady a wind that now when a side one set her sails back for a moment, many felt a misgiving as to her speedy recovery, and ran about wringing their hands, instead of colmly waiting that turn of the rudder, that resetting of the sails, which was all that was necessary to put the ship on her right course again. This is the process in which our financiers and manufacturers are at present engaged.

There is no reason why the harvest of 1908 should not equal, if not surpass, that of 1906. Added to the enormous area of land which gave us the harvest of that year, thousands of acres of virgin soil have been broken by new settlers this autumn, and thus the country starts off in better preparation than ever for the coming fray. Tremendous sums are to be spent in railway construction which will materially swell the general consumptive demand, and there will be no lack of labor if immigration reports are to be relied upon. Foreign capital, too, is more than ever ready to take its share in the development of the country as can be judged by the way in which railway stocks have been snapped up abroad.

Another great factor in feeling confident as to the immediate future, is the one that stocks of commodities are generally low throughout the country. Dealers have been buying in a limited way for the past few months, but the needs of the country are as great as ever, will be more so when the year opens out properly, and this great point should not be overlooked in the general forecast.

Canada's resources have only just been touched, her future is an open book to those who possess a knowledge of her great wealth of possibilities. Therefore let every man go about with absolute confidence in the future, every optimistic expression will have the right effect upon those people who think very little for themselves, and depend upon others for their opinion. Travelers can do much good in this respect, especially in the smaller towns. By talking of prosperity and of good trade, they can inspire that confidence in the trading of this year, which those who have the fullest knowledge of the position, have never lost.

The following expressions of opinion as to the prospects of 1908 from various manufacturers and jobbers make interesting reading. They show that there is little cause to fear for the future, and that if the people generally will only go about their business quietly and without indulging in senseless panics, there need be no apprehensions as to hard times. "Go slowly, but go confidently," seems to be the motto set, and if this advice is followed, there is no reason why a bumper year should not be recorded. Canada's resources are not founded upon quicksand, and the country can stand with equanimity a greater blow than the one the late depression has given her.

No Justification for Alarm.

George Caverhill, of Caverhill, Learmont & Co., Montreal, interviewed by Hardware and Metal, as to the prospects of 1908, struck a reassuring note.

He said. "Having occasion lately to look into the trade of the Dominion from the Atlantic to the Pacific, I cannot see any justification for the present state of alarm in which people seem to be. There is no doubt that there is some reason for caution in Manitoba and the Northwest, but the banks are now getting control of the situation. I look upon this depression in business as a natural outcome of the high speed at which the world was doing business. As is only to be expected at such a time the mercantile classes lived at too high a rate, forgetting that the day of reckoning must come. To get the money necessary for this procedure they had to resort to all manner of frenzied finance, and in the end they had to be brought back to their senses. So far as Canada in general is concerned, if people will only buy what they want, and keep their heads, I see no reason why anybody should be hurt."

Conditions Already Improving.

G. C. Davis, of Frothingham & Workman, Montreal, saw no reason for the panicky feeling that exists in some quarters. The resources of the country were as great as ever, and the stability of trade could be judged by the fact that despite the financial situation, and the hard times talk, prices of commodities have remained firm. "Conditions have already started to improve in the States," said Mr. Davis, "and all authorities predict without exception a shortage of goods during the first part of the season. There is no reason, as present indications are, why this year should not be just as good as 1907. It is only necessary to dispel the pancky feeling for the people generally to realize this."

A Year of Caution.

"This will be a year of caution," said W. H. Carrick, vice-president of the Gurney Foundry Company, Toronto. The talk of financial panic a few weeks ago caused merchants to go slowly, and they are prepared for any condition which may develop in 1908. But it will not be a blue year. We are preparing for a very active trade and will re-open our two foundries as soon as we can get our furnaces re-lined. Iron will be more plentiful and slightly lower in price. Collections have been very satisfactory, although there has been some difficulty in certain sections in clearing out the stoves in stock, owing to the mild weather so far. The heavy demand for repair parts during the past couple of months indicates that a cautious feeling exists, but with a bright outlook in the spring retailers will find trade as satisfactory as it has been during the past few seasons."

No Setback in Maritime.

"So far as the Maritime Provinces are concerned," said W. H. Evans, of

the Canada Paint Co., Montreal, "there does not seem to have been any check or setback in business whatsoever, and for the coming season it is not thought that there will be any diminution. In fact, I anticipate that trade will be even better in this part of the Dominion than last year. In Quebec and Ontario a feeling of caution exists, and business may lag for a short time. I am assured, however, that the banking tension will relax about the first week in February, and my company certainly looks for a heavy spring trade, having run their factories full time all the winter with confident anticipation. Regarding the Northwest, the situation at the moment resembles a giant slumbering. All the elements of strength are there. A pause certainly exists, but from all accounts I agree with Sir Thomas Shaughnessy that a good healthy condition of business will prevail for the coming year, although it may be a little late in the booking. Speaking generally, it behooves everyone to take a lesson to heart from the present situation, and not branch out too far beyond the limits of their capital."

Booked Orders Show Increase.

H. S. Harwood, manager of the Toronto branch of the James Robertson Company, Limited, is very optimistic regarding the 1908 outlook, and displayed a large pile of orders booked for forward delivery, some of the largest paint bookings being for amounts twenty-five per cent. greater than in 1907. This indicates that building throughout Ontario will be active during the year. In plumbing supplies, also, the prospects were considered very bright.

Opening New Branches.

H. J. Fuller, president of the Canadian Fairbanks Co., Montreal, is exceedingly hopeful of 1908. "The amount of railroad building in sight throughout the entire country, with the consequent expenditure distributed among a comparatively small population, should be an immense factor in sustaining general trade. It is a well known fact that the lumber cut throughout the country, from New Brunswick to British Columbia, will be much less this spring than last, owing to the amount of unsold lumber on hand, and this will have a considerable effect upon the mill trade. I believe that conditions are more prosperous throughout the Province of Quebec and East than they are in any other portion of the country. The coal and steel industries in Nova Scotia seem to be on an exceedingly prosperous basis. I also note with interest the prospects for development of the iron business in New Brunswick. We are increasing our sales staff by about 15 per cent. in order to cover the country more thoroughly, and are this year opening branches at Calgary and St. John, N.B., which, I think, is an indication of our confidence in the general conditions and ultimate future of the country.

J. R. Kinghorn, of the Montreal Rolling Mills, is optimistic regarding the business for the coming year. The conditions in the south should not prevail here, as Canadian currency is more elastic. "It is perfectly true," said Mr. Kinghorn, "that the merchants and manufacturers in this country have been buying more cautiously, and have reduced their stocks considerably, and from what we can learn the stocks carried on hand to-day are very light, and much below normal conditions. Even assuming that the consumption during the year will not be as great as during 1907, it must not be forgotten that goods were imported which would not otherwise have been, had Canadian manufacturers been able to give the delivery that was required. This business, added to the ordinary general run of trade, which the manufacturers are naturally looking after, will, to an extent, offset the decreased consumption which is expected in some quarters. Manufacturers, as a whole, have recognized the necessity of running their plant in keeping with orders received, and there has been no over-production, and no necessity of cutting the values in order to get business. We are looking forward to a good spring and summer business."

Spring Will Bring Activity.

E. Goodwill, of the Thos. Davidson Mfg. Co., Montreal, saw no reason for the feeling of doubt that existed in some quarters as to the prospects of trade. As soon as the money stringency was over, things would open up all right. Business might be a little slow in January and February, but as soon as the spring came, trade would become as good as ever. There was nothing to be alarmed at in the condition of the country.

A leading Montreal jobber in giving his opinion, stated that the people of this country were never in a better shape than they were at present, while the farmer, the backbone of the country, never had so much money. Tight money, and the policy followed by some of the bankers, were responsible for some of the unrest, but this would all disappear in a very short time. With the advent of March, he anticipated that the revival of trade would be so great that many concerns would be unable to keep pace with the demand.

Import Orders Large.

A. D. Kennelly, manager of the Toronto branch of the McClary Mfg. Co., said that judging the outlook for the coming year by the way import orders for metals were being received in the face of uncertain market conditions, there was no reason for doubt as to the business activity during 1908. While there was considerabe talk of carry-over stocks of stoves, Mr. Kennelly only knew of about half a dozen customers who had any surplus stock. His firm had run short of some sizes in the fall, and had followed the policy of re-purchasing from customers in districts where it was thought sales would not be large. Collections had never been better than during the past fall, said Mr. Kennelly, he instancing the case of one dealer who had always been slow in payments, paying up in full this time, asking for and receiving a discount for the payment of the account before it was due. "The situation, generally, can be judged," added Mr. Kennelly, "by the fact that we forwarded $35,000 more cash to our London headquarters from Toronto in 1907 than in 1906, our previous banner year."

Farmers Prosperous.

Charles G. Knott, manager of the Canada Screw Co., Toronto, said he could see no reason for anything but an active year's business ahead. "Two years ago," said Mr. Knott, "we had large stocks of manufactured goods on hand while now stocks are depleted and we have many orders unfilled. I was just talking with the representative of a large farm implement firm and was told that their company never had a better fall for collections in the company's history, so it is evident the farmers are in a prosperous condition."

Cannot Check Canada's Growth.

Mr. Haldenby, manager of the Sanderson, Pearcy Company, Toronto, is very optimistic about the prospects for a busy 1908. "It is an utter impossibility," he said ,"to check the growth and prosperity of Canada on account of its wonderful resources, and the influx of population. The next ten years, I will venture to say, will mark the greatest business era the country has ever seen. We have had a little setback, but this only tends to strengthen the immediate

Retailers' Stocks Low.

The Taylor-Forbes Company, Limited, Guelph, write: "As to our opinion of the condition of the market our belief is (and it is founded on close connection with the hardware trade) that they have very little stock on hand. We are receiving regularly small sort-up orders which shows that the stocks of staple lines is exhausted. We anticipate at an early date a very large volume of business.

"The financial stringency does not seem to have affected any of our customers, they have all paid up, and we have not a lame duck on our books. There is plenty of money in the country but it is not being handed out as freely as the electric power campaign literature. Of course, the financial question is one to be solved by the makers of money—the bankers—and as we only understand the manufacture of iron work we are not able to solve the financial question, but we do believe after this very bad attack of 'financialitis' is over business will be stronger and healthier."

Depression Chiefly Talk.

"As far as our experience goes," write the B. Greening Wire Company, Hamilton, "the depression conditions of trade have been principally talk. We have just closed the largest and most prosperous year in our business.

"We find orders coming in freely in some lines, but of course, there are customers who are holding back orders and our bookings for next spring are,

therefore not as large as usual or as we should like to see them, but against this we should say that the bulk of the individual orders are fully as large and in some cases larger than last year.

"In one department we have overtaken our orders and are working entirely on stock to meet the usual spring demand, but we have thought it advisable to put this department on 8 hours; in fact, we have two departments on 8 hours, but against this we have two other departments running until 10 o'clock three nights a week and are now making arrangements to run one double shift and put a portion of our rope department on double shift. Double shift really means more than twice the work as we get 22 hours instead of 10, the night shift being composed of 12 hours."

Demand for Iron Large.

The Hamilton Steel & Iron Company, Limited, write: "While the market for iron and steel has been quiet for the past few weeks, we are satisfied that it is improving and we believe the mills at a very early date will be rushed with orders. Stocks are light and the reduction in requirements as compared with last year, will be more than offset by the loss in the production of iron and steel, due to the extensive shutting down during the past month or so of plants, both here and in the United States. We are confident that there will be no glut of iron and steel during 1908, as the basic conditions throughout the country are good and the demand is bound to be large."

Conditions Eminently Satisfactory.

The Dennis Wire & Iron Works Company, Limited, London, write: "As far as this industry is concerned, business conditions are eminently satisfactory. We are at the present time, running to our full capacity in every department. At the present time we have 70 hands employed, whereas, a year ago our staff was down to thirty and at Sept. 1st, 1907, fifty-five. Up to the end of last week we have been running overtime on an average of three nights a week. Our employes are all men; we have no boys or girls in our works.

"We have sufficient contracts in hand to keep our present staff going for about six or eight weeks. In our business we are principally contractors for ornamental metal and structural iron work in connection with buildings. We are, in many cases, about the last contractor on the job, so that we are busy now installing work for buildings started early in the year.

"The outlook seems from our point of view quite favorable for 1908. Of course, we do not know what or how much work is being planned and under consideration in the architects' offices, but from information we have been able to get we believe that the architects will have a good deal of work as usual to be tendered on after the spring has opened up. We expect a normal and satisfactory business during 1908 from present indications."

Future Depends on Banks.

The Brown, Boggs Company, Limited, Hamilton, write: "Up to about the first of October we were very busy indeed. Since then trade has fallen off to such an extent that we deemed it advisable to lay off some seventeen of our hands, and for a time to run only eight hours a day. During the last two weeks, however, business has improved somewhat, and orders are coming in much better; so much so that we are now running nine hours instead of eight. We have a number of inquiries for machinery, which is always a fair indication of business following during the next few months after the inquiry.

"As far as we are able to judge, it will depend largely upon the banks as to how trade will be in the spring. If they continue to be so exacting in their loans and cautious in their investments, they will continue to seriously cripple trade and dampen the ardor of those who are and have been willing to go into new lines of industries, or extend out their present lines.

"Collections have been very good with us as a whole, and our customers generally are sanguine as to the prospects of trade in the near future. Personally we do not feel at all uneasy, and we look forward to a good trade in the spring if not sooner."

1908 Will End Well.

The Shultz Brothers Company, Limited, Brantford, write: "Our company have never enjoyed during the forty years of its history a better year than the one just ended.

"As yet it is a little early to say much about the trade for next season, but we are making the usual preparations and while we are not looking for work to come in with a rush at the early part of the season, yet we feel quite sanguine that confidence will be re-established and that 1908 will end up in the aggregate with as good a showing as any of its predecessors. We have already secured some good contracts for the coming year."

Large Unfilled Orders.

The Galt Art Metal Company, Limited, write: "We have on our books at the present time a larger number of unfilled orders than we had last year, which was considered a splendid season. We have made enquiries from our travelers, and they seem to consider that the outlook for business in 1908 is splendid. Some assert that they can see no falling off in prospects, compared with this time last year. There seems, however, to be an idea that prices will be generally lower and buyers do not seem in a hurry to close, which we think is a natural condition at a time of an unsettled market."

Cement Trade Good.

The Belleville Portland Cement Company, Belleville, write: "As far as the cement business is concerned the winter season is the slow season as our material is only used in substantial quantities during the summer season. So far as we have gone we find the spirit very good amongst the dealers and we have booked a considerable number of contracts on just about the same line as our contracts last year. We hear no pessimistic talk anywhere as to business conditions. The only trouble that we can find is the scarcity of money. This seems to be chronic in every section, and if this condition should be eliminated business would certainly be quite satisfactory."

Big December Trade.

The Stevens-Hepner Company, Limited, Port Elgin, write: "We increased our plant very largely a year ago and our trade each month during the past year has shown a large increase. This has been maintained right up to the present, the month of December showing an increase of 70 per cent. above last year. We have not as many orders ahead as we had a year ago but this is accounted for to some extent by the fact that with our increased capacity we have been able to make more prompt delivery. Besides a few dealers who usually buy their spring goods in November or December, have decided to wait until after the new year. We are working on orders with a full staff almost double that of a year ago, running full time and in our broom department we have not a dozen in stock as they go out as fast as we can make them. We look forward to a good spring trade."

Preparing for Good Season.

The R. McDougall Company, Limited, Galt, write: "As there was no reason for the shock to business interest we look for a speedy recovery and are preparing for as good a season as we have ever enjoyed. We are also of the opinion that present depression will do both employer and employe good, as both parties were a little inclined to 'get gay'. We, of course, might add that the sooner conditions become normal the better we will be pleased."

As Good As 1907.

The London Foundry Company, Limited, write: "At present things are very good, orders are beginning to come in, and it looks as though 1908 will, in every way, be as good a year as 1907. Inquiries are coming in every day for trucks and wheelbarrows, and mostly for these in large quantities. We believe that once the present money stringency is lifted the trade will be as lively as ever."

Outlook Brightening.

The Waterous Wire & Nail Works, Brantford, write: "We are, at present, busily engaged in making up stock for spring delivery and are running our factory with a full force of employes and full time. In fact, may say we have made our usual preparations for the trade and so far as we are able to judge at the present moment, this has a brighter outlook than it had a short time ago. We believe that, should we be blessed with our usual Canadian winter weather and the crop prospect

open out favorable in the spring, our trade will be equally as good as other years and that this will no doubt be affected somewhat by the scarcity of money, owing to the depression which has lately taken place in the United States, which, in reality, should not affect Canada to any very serious extent.

"Already our inquiries for goods are coming in for next season's delivery and we hope to have equally as good trade next year as we have had previously. Although it is somewhat early to speak definitely of this, yet we look for a brighter year in the future than we have had during the past. Our collections, though somewhat slow, are steadily coming in and we hope this will improve during the early part of the coming year."

Feed Shortage at Kingston.

W. B. Dalton & Sons, Kingston, write: "In this section of the province the conditions of trade are none too bright, and while there is no immediate fear of any great falling off, still there is a great shortage of feed for cattle, and the farmers have to spend the money in buying feed, which in other years they have been able to pay on their accounts with the country merchants. It, therefore, follows that many country merchants will, no doubt, be behind in their payments, and unless we should have another shortage of crops in the coming year, do not think there is any great cause for alarm at the present time."

Edwin Chown & Son, of Kingston, write: "Our section has suffered very much with the drought of 1907 and most of our farmers had to dispose of a good deal of their stock, as they did not have enough feed to winter them through. It has greatly reduced the prospects for the coming year in the dairy line, as cheese is the principal product of the farm in our section. Their spending power has been greatly reduced and will be for a year or two to come, as they have sold their young cattle, which will affect the future somewhat. Business at the present time is at a stand-still and is greatly lowered from last year."

1908 Full of Promise.

G. F. Sterne & Sons, of Brantford, write: "While business has been better with us, than has been the case for the last month or six weeks, things certainly are not bad enought to lead us to take a pessimistic view of the future, in fact, conditions force us to go to the opposite extreme, and take an optimistic view of everything in connection with our business as conditions seem to promise that 1908's business will be considerably larger than was that of the year which is just closing."

Other Opinions.

Walter Woods & Company, Hamilton, write: "While our trade has kept up well and collections have been fair, we feel that there has been for some time a general feeling of "go slow' on the part of buyers, and on the part of sellers (in most lines) a desire to push goods even at a slight discount, on going rates, if by so doing an order can be had. Owing to the careful buying of the past few months we look for an early sorting spring business, and hope that the speculative element has been eliminated to a great extent, and that trade will be the better for it."

J. H. Connor & Son, Ottawa, write: "Our business for the year was 14 per cent. more than in 1906. Our travelers report that dealers are not complaining of the business they are doing, but do not wish to place orders for future delivery, owing to the possibility of prices declining. We have every confidence that the business that will be done in 1908 will be fully as good as last year."

The Brantford Roofing Co. write:— "The prospects for the spring trade are as favorable now as they have been in previous years. We are not depending upon local business, however, having a large export business, and for this reason we are unable to give anything more definite. We do not consider that there is anything to be alarmed at in the immediate future."

Aylmer Iron Works, Aylmer, Ont., write: "During the last few months of the year business has been rather dull, but we are pleased to report a slight improvement at present and that prospects for 1908 are fairly bright."

The Gurney Scale Co,, Hamilton, write: "Our total sales of scales for 1907 was larger than any year since we have been in business, and can see no reason why 1908 should not be as good or better."

The Dundas Axe Works, of Dundas, write: "We see no reason why there should be any marked falling off in trade, but find merchants disinclined to place orders ahead for 1908."

Scarfe & Co., Brantford, write: "We do not see anything in the present situation to warrant serious fears of a trade depression. We are just closing the most successful year we have experienced in thirty-three years' business and are looking forward to 1908 as still better."

F. W. Bird & Son, Hamilton, write: "The year 1907 has been a banner one for us and business is all we could expect it to be at this season of the year. For 1908 the indications are very favorable."

The Belleville Hardware Company, Limited, Belleville, write: "From our standpoint things are flat. A year ago we had orders enough on our books for spring delivery to keep us going from four to six months. At the present time we have nothing on order for spring delivery. What the prospects are for the future is a mystery. We have no way of knowing, but believe that things will pick up in the spring. In the meantime we are making up a heavy stock to meet the rush."

The Durham Rubber Company, Bowmanville, write: "We have found a slight falling off in business during the last month or two, but nothing very serious. We attribute the same to the stringency of the money market for the past few months."

A. B. Jardine & Company, Hespeler, write: "Business is quiet with us at present, but we always find it so at this season of the year. We expect to have good business this year as we can see no reason for any prolonged depression."

The Hamilton Brass Manufacturing Company, Limited, write: "Our business for 1907 is far ahead of 1906, and from present indications look for a good spring business."

The D. F. Jones Manufacturing Co., Limited, Gananoque, writes: "We have found business in our line very dull for the past six months, and do not see any marked improvement, so we are looking for even a smaller volume of business in 1908 than we had in 1907."

HARDWARE TRADE GOSSIP.

Quebec.

E. Hall, of Linton & Hall, Calgary, is in Campbellford visiting his people, and will take in Montreal before returning to the West.

J. H. Cleland, manager of the Meaford Wheelbarrow Works, spent the holidays in Montreal, combining business and pleasure.

J. Burns, representing the Paterson Manufacturing Company, Montreal and Toronto, in Vancouver, has been visiting headquarters in Montreal.

The United States Steel Products Company, Montreal, are calling special attention to their manufactures of wire, which are particularly seasonable.

Archie Macfarlane has returned to Montreal from a trip to New England, where he visited the headquarters of several of the firms whose interests he represents.

C. M. Strange, of Lewis Bros., Montreal, has been visiting Ottawa for a couple of days on business.

The hardware stock owned by Morency & Cote, hardware merchants, Montreal, was damaged by fire this week.

The premises of Lockerby & McComb, manufacturers of tarred paper, Montreal, were practically gutted by fire on Monday night, damage being done to the amount of between $40,000 and $50,000. The property, however, is well insured. The employes of the firm had barely reached their homes when the first alarm was sent in. By the time the firemen arrived it was seen that it was too late to save the building in which was stored tar pitch and other materials required in the manufacture of tarred paper. Great alarm was felt for some time as the premises adjoin the large gas holder of the Light, Heat & Power Company, but luckily the wind changed and the flames were prevented from spreading. The Mount Royal Foundry was also in danger, but a thick wall saved the place from all but slight damage. D. W. Lockerby could give no reason for the origin of the fire.

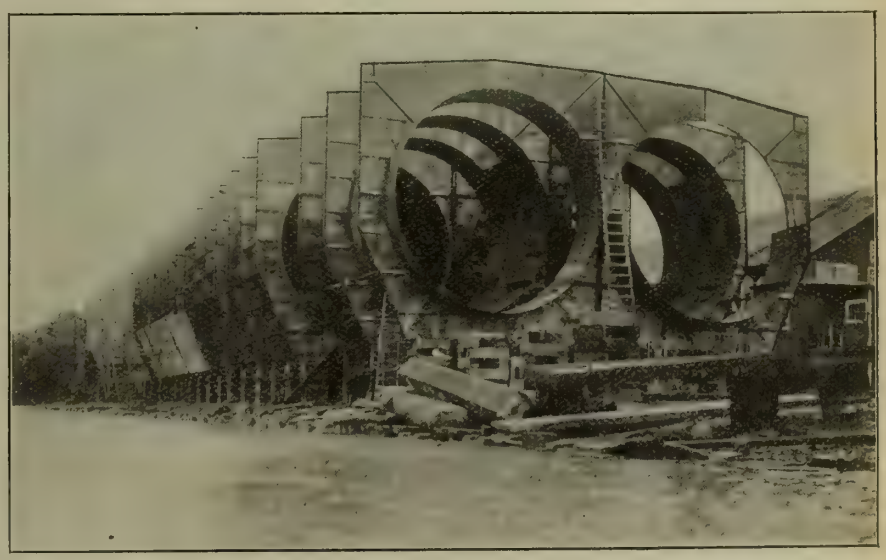
Maritime Provinces.

Alexander John Hood, for forty-five years postmaster at Yarmouth, N.S., and one of the best-known men in western Nova Scotia, died a fortnight ago, after a year's illness. He was a native of Weymouth, N.S., where his parents settled after coming from England. He was in business as a dealer in tinware and stoves at the beginning of the Civil War, and made considerable money. In 1862 he was appointed postmaster. He is survived by a daughter, Mrs. Charters, of Point Duchene, N.B., four brothers and two sisters. One of his brothers is Mayor of Yarmouth, and another is sitting magistrate of Phoenix, B.C.

The Detroit River Tunnel

Subaqueous Tunnel being Constructed to Connect Detroit and Windsor—To be Completed in 1909—Novel Method of Construction.

In a very little while, measured by the swift flight of time in this era of rapid solution of transportation problems, the huge railway car ferries on the Detroit River will have passed from the traffic life of the busy stream. For many years these powerful steamers have transported the enormous freight tonnage and millions of travelers across the border between the two countries. The five trunk lines—the Michigan Central, the Grand Trunk System, the Wabash, the Pere Marquette and the Canadian Pacific—operate no less than ten of these car floats.



When the Detroit River tunnel, one of the most important railway enterprises of the present time, is completed, the through "limited" and express trains and the long heavy freights of all the trunk lines will pass below the bed of the river, and rise to the surface of another country in six to seven minutes. By the present system, about thirty minutes is lost in ferrying and switching each express train, and from four to seven hours in handling through freights; while perishables, which are given the preference over all other classes in quick ferriage, do not get under way again within three hours. In winter, when the ice floes brought down from Lake St. Clair by the swift current, often jam the river from bank to bank, the big steamers frequently become fast in the stream, and the delay from this cause to fast passenger service between the east and the west sometimes amounts to from three to twelve hours.

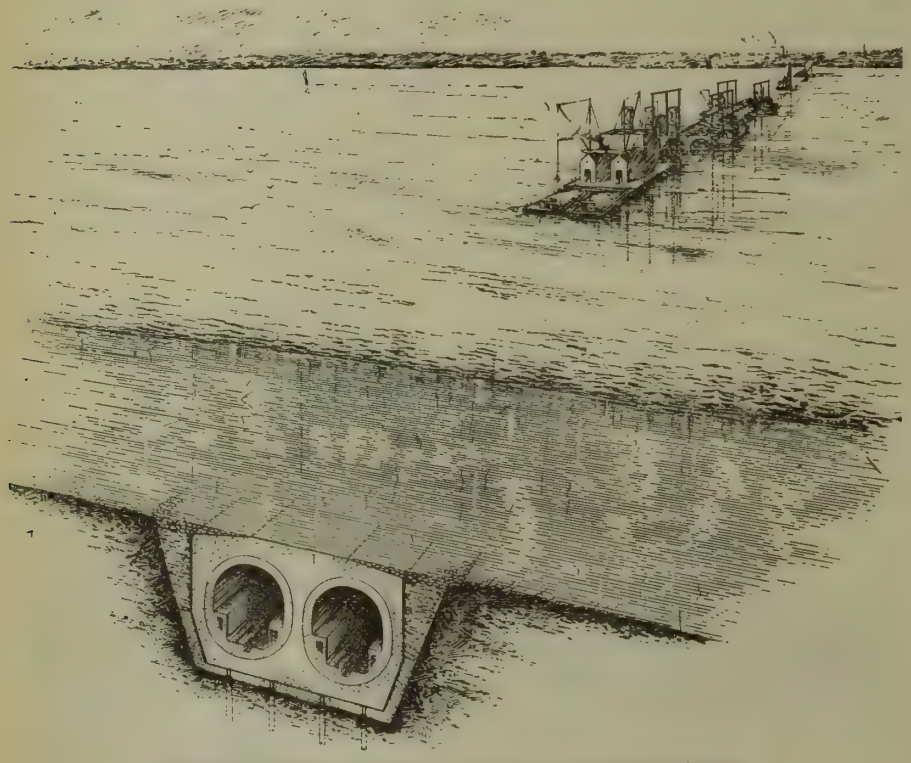
The saving in time and expense of operation in moving the heavy traffic across the river through a double-tracked tunnel, over the slow and uncertain ferry system, is deemed by the Michigan Central officials, in view of the ever-increasing tonnage of the road, of sufficient moment for the expenditure of $10,000,000 in the construction of the international tunnel-way. About three years ago the project was taken up by Henry B. Ledyard, the advisory board being appointed in June, 1905, composed of W. J. Wilgus, then chief engineer of the New York Central and in charge of the electrification of the New York City terminals; H. A. Carson, consulting engineer, who designed and built practically all of the Boston subways, and W. S. Kinnear, chief engineer of the tunnel, in charge of construction.

Instead of digging parallel bores through the tough blue clay far below the bed of the river, by means of shields driven by hydraulic rams, a great trench has been dredged out of the bottom of the river, in which are being sunk successive tubes of steel, 23 feet in diameter and 260 feet long, secured together by transverse stiffening diaphragms of steel at every 11 feet of their length. These tubes form the waterproofing of the tunnel proper, which consists of a solid ring of concrete, two feet in thickness, formed within the tubes. The width of the river between dock lines is about half a mile, and the sub-aqueous section of the tunnel, or part entirely under the river, will consist of ten of these twin tubes, with a total length of 2,622 feet. Along the bottom of the trench, rows of piles have been driven and capped, to form a bearing for the tubes.

The tubes are built at the shipyard of the Great Lakes Engineering Company 45 miles away. The ends of the tubes are "plugged" with stout wooden bulkheads, to render then water-tight. They are then launched into the river sideways, very much as lake ships are launched. Floating lightly on the water, and drawing no more than six feet, the tubes are towed by a tug down the river to the place where they are to be sunk. On top of the tubes and near each end are two air cylinders, ten feet in diameter and sixty feet long, strapped securely to the tube diaphragms, and these serve to regulate the settling of the tubes, as they slowly fill with water, which is admitted at the will of the engineers through gate valves in the bulkheads. There is also provided at each end a detachable upright, firmly braced to the section and of sufficient length to indicate the position of the tubes when they have been entirely submerged. These uprights also show the engineers the exact position of the tubes when they are resting on the piling, eighty feet below the surface of the river, and act in adjusting them in their position laterally, so as to bring the sections into alignment. The uprights extend about ten feet above the water when the section is in place. After all is prepared and proper precautions have been taken to check the least deviating movement, the gate valves are opened, and the tubes slowly settle into position.

Each tube as constructed in the shipyard, is provided at one end with a sleeve, which is slipped over the end of the adjoining tube already sunk and in position. The sleeve is fitted with a flange, which is bolted to a corresponding flange of the other tube, a rubber gasket being placed between the two. A similar gasket is slipped in at the inner end of the sleeve, bearing up against the edge of the other tube. When the bolts are in place and all is ready, divers turn up the nuts, thus squeezing the rubber gaskets together between the ends of the tubes to form a tight joint. An annular space of three inches by eighteen inches is thus formed all around the tube at the joint, which is then filled with a grout of pure cement. To this end, each sleeve is provided on the top with two small pipes, flexible at the joints and leading up to the cement scow floating above. The water in the space is then pumped out and if the least leak occurs in the main joint, there is more work for the divers in bolting up. When the joint is absolutely water-tight, pure cement is pumped into the space through one pipe and continued until it comes out through the other, which is evidence that the space is completely filled.

Front View of Tunnel Tubes Connecting Diaphragms.



The water in the tubes is now pumped out and the inner bulkheads removed, leaving the space clear and dry to the outer bulkheads. Concrete gangs now come on the scene and, pushing their big, half-circular wood forms along into the new tubes, proceed to build up the tunnel itself, which is of solid concrete, varying in thickness

from two to five feet. The concrete tube is calculated to be of sufficient strength to withstand all strains and vibrations of the heaviest trains, the steel tubes serving as waterproofing protection, while the outer covering of concrete in turn is the steel tube preservative. On each side of the lower section of the tubes there are benches of concrete four feet high and two and a half feet wide at the top, to serve as passageways and places of refuge for the trackmen. When the concreting is completed there is a clear head room of eighteen feet from the tops of the rails to the centre of the arch.

Out in the stream are the cement scows, fitted out with the latest concrete mixers and with huge cranes and other devices for the rapid handling of the material from the lighters alongside. The scows are anchored as immobile as is possible in the swift current of the river, which is constantly churned into choppy waves by the hundreds of passing freighters and excursion and ferry boats plying the busy stream. By means of hoppers placed at the top of long vertical delivery pipes, the concrete, as it is prepared, is deposited in the trench exactly where it is needed, and comes in contact with the water only when it is spread over the surface of the gravel bed which was prepared for it. As the work goes on, the concrete is held in proper form about the tubes by three-inch oak planking, firmly braced and backed up with clay and river slime from the dredges, working in the trench farther out in the river. Concrete is also chuted down between the tubes and continued up over them for five feet, thus encompassing them in a solid, monolithic mass. The trench is then filled around the tunnel, and the top is covered with riprap.

The construction of the approach tunnels is proceeding on lines well established by the best engineering practice, and this part of the undertaking is a huge task of itself. Two shafts were first sunk at the river banks, one on each side, and from these excavating for the centre wall was carried on inland as far as other shafts and from them to the portals. Concrete gangs followed, building up the centre wall, and when this was completed, the bores were pushed forward by a modification of the shield methods of the New York tunnel work, the change being necessary because of the tough clay of the under stratum. The shafts near the river will be permanent, and they are lined with double walls of concrete. They will serve to ventilate the tunnel, and as trains move in each tube only in one direction, a constant circulation of air will be maintained.

Electricity will be the motive power used in hauling trains through the tunnel, and current from the power plant of a local concern has been arranged for. Only a small transforming station will be needed to convert the alternating current, commercially supplied, to direct current for the locomotive motors. For the operation of the tunnel, eight powerful electric locomotives are being constructed. It will be brilliantly lighted with electric lamps, and the walls will be clean and bright, for there will be none of the gas and soot that fill tunnels operated by steam locomotives. A system of block signals will be installed, and so arranged that no train or locomotive will enter either tube until the train ahead of it has passed beyond the summit on the other side.

Detroit—Windsor Tunnel, Looking Towards Canada.

OPENED SAMPLE ROOMS.

McClelland Bros., representing the Associated English Factories, Birmingham, England, have opened Canadian sample rooms at 23 Scott Street, Toronto, to display goods manufactured by the following English firms: The Welsh Tinplate and Metal Stamping Co., Llanelly; John Collyer & Co., Birmingham; Southern & Richardson, Sheffield; Charles Joyner & Co., Birmingham; Atkin & Son, Birmingham; Matthews & Timmings, Birmingham; Pugh & Co., Wednesbury, and W. Robertson, Warrington.

R. Fletcher, formerly of R. Fletcher & Son, Toronto, has been appointed Canadian manager, and the retail trade is invited to visit the sample rooms, which are large and newly decorated, and the lines on exhibition are all high class, these including tinware, enamelware, brass goods, fireplaces, electrical fixtures, cutlery, tools, etc.

In addition to the Toronto office a branch will be established in Vancouver next month, with Mr. Phelp of Birmingham in charge.

MANY HARDWAREMEN ELECTED.

Amongst those connected with the hardware and kindred trades elected to municipal office in Ontario on Jan. 6, were:

S. Stevely, London, mayor.
J. H. Crow, Welland, mayor.
J. C. Shaw, Wallaceburg, mayor.
J. R. Carscallen, Dresden, mayor.
T. C. Clare, Preston, mayor.
R. Parsons, London, alderman.
G. W. Armstrong, London, alderman.
H. W. Wright, Hamilton, alderman.
Hugh Sweeney, Hamilton, alderman.
Norman Clark, Hamilton, alderman.
Harry Southcott, St. Catharines, alderman.
Geo. Penfold, Guelph, alderman.
Harry Mahoney, Guelph, alderman.
W. H. Westman, Chatham, alderman.
John J. Coffey, Barrie, deputy reeve.
Harry Field Cobourg, councillor.
O. M. Hodson, East Toronto, councillor.
Wm. Linton, East Toronto, councillor.
J. S. Christie, Owen Sound councillor.
P. Shiells, Kincardine, councillor.
W. Conrad, Waterloo, councillor.
T. Brocklebank Arthur, councillor.
W. G. Scott, Mt. Forest, water commissioner.
W. F. Michus, Preston, water commissioner.
P. Chown, Kingston, school board.
J. T. Norton, Ingersoll, school board.

Allan Huber, traveler for the Canadian Aluminum Company, Chambly Canton, Que., was first reported as elected mayor of Berlin, with 6 majority, but later announced as defeated by 4 votes. D. McNabb, Orillia, was defeated for first deputy reeve by a small majority, and J. Walton Peart, St. Marys, also escaped election, polling a creditable vote.

If any other hardwaremen took part in the elections, Hardware and Metal will be pleased to receive a report of the results of their candidature.

A new warehouse is to be erected at Calgary, Alta., by the American-Abell Engine & Thresher Company, of Toronto.

Don't be a phonograph—merely repeating what you hear other men say. Analyze things for yourself—or keep still.

CAN WE HELP YOU ?

There are some hardware dealers living in this 20th Century who are still using 19th Century methods. They do not realize that Halifax is closer to Vancouver to-day than Montreal was to Toronto fifty years ago.

Twenty-five years ago it was a calamity for a merchant to lose a good clerk, for he knew it was practically impossible for him to get in touch with an experienced man. Such an idea as making a deal with a fellow hardware man a couple of hundred miles away either to buy a set of tinners' tools or to sell a second-hand counter or show case did not seem practicable to even the most progressive hardware men. If a man wanted to sell his busines he had to accept the highest price he could get from some one of his fellow townsmen for no one else knew of the opportunity or had any means of finding out about it.

To-day the up-to-date dealer

Creates His Opportunities

He states his wants briefly in a "Hardware and Metal want ad." and in four days' time practically every hardware merchant, clerk, hardware manufacturer and traveler has read the proposition, and it seems reasonable that somewhere among the "blue noses" of the Maritimes or the pioneers of the boundless West someone will want just what he has to offer.

Every Hardware Merchant in Canada

can take advantage of our "want ad." page. Ask yourself.

Is there not some article I would be better without if I could get a fair price for it? If you cannot get a fair price for it by appealing to the trade throughout Canada you had better sell it for scrap.

We can help you but **you must take the first step.**

Surely it is worth 25c or 50c to find the one man in Canada whose wants dovetail into just what you have to offer.

Hardware and Metal

MONTREAL TORONTO WINNIPEG

TORONTO PLATE GLASS IMPORTING CO.'S

New Plate and Window Glass Warehouse and Works

Situated Don Speedway. Glass Bending Works, 209-213 Victoria St., Toronto

To Our Customers:

¶ Since the destruction of our fine offices, warehouse and factory, 135-143 Victoria St., last March, we have completed the erection of one of the best plate, sheet, and general glass warehouses, as illustrated on opposite page, with every modern device and convenience suggested by long observation and experience in the glass trade, acquired in Europe and Canada. In a word, our facilities are such that no order is too small and certainly not too large for us, in the manufacturing of stained glass and ornamenting of glass in all its branches, as well as bevelling and silvering of glass.

¶ Our machinery is all new, with every known improvement, enabling us to compete with the very lowest markets, domestic and foreign, and which enables us to turn out an article that cannot be excelled in point of quality, excellence and neatness, and our customers can thoroughly rely on the best satisfaction in both goods and deliveries.

¶ We wish to thank our customers for their sympathy in our disorganization through the fire, and to say to them that by strict attention to their orders for glass of all kinds, we hope to merit a larger share of their future business.

¶ We beg to solicit your orders for delivery from stock and import in the new year, 1908.

Toronto Plate Glass Importing Co.

(Hill & Rutherford)

If you have a sign over your door, you are an advertiser. The sign is intended to advertise your goods to passers-by.

An advertisement in Hardware and Metal is just so many thousands of signs spread over the Dominion of Canada.

If you want to secure a clerk or a tinsmith, if you want to buy or sell a business, if you have a counter or a show case for sale, or if you want to buy a set of tinsmith's tools or a second-hand typewriter—in fact, if you have any proposition which you want placed before hardwaremen, stove and tinware dealers in Canada, state your wants briefly on our "want ad." page and your message will be put on a sign board which will be seen and read by practically every dealer and manufacturer in the hardware, stove and tinware lines in Canada.

Retail Hardware Association News

Official news of the Ontario and Western Canada Associations will be published in this department. All correspondence regarding Association matters should be sent to the secretaries. If for publication send to the Editor of Hardware and Metal, Toronto.

SUPPORT HOME MERCHANTS.

The St. Mary's Journal has been doing some practical work during the past month or so, in drawing attention to the false claims of the catalogue houses and in removing the impression existing among farmers and some townspeople that money can be saved by sending cash to the big stores in Toronto, Montreal or Winnipeg, instead of patronizing the local merchants.

The Journal is doing a commendable work, which is certain to win the friendship of retailers and readers of this page will do well to pass this article on to their local publisher with the tip that he can to advantage follow the example of the Journal editor, who writes as follows :

Buy at Home.

"The people of St. Mary's are admirably served by local stores and do not need us to tell them so. St. Mary's dealers are fair dealers, satisfied with moderate profits and ever ready to oblige. Their stocks are large and well chosen. Above all they are the men to whom you apply for credit before harvest or till the market suits you to sell the products of the farm or of the workshop. It is fair to give them a chance for a reasonable living profit on your general trade. Then again the local dealer feels a responsibility that the cut and come again merchant at a distance does not have to feel. Take one year with another and a course of years following. We feel sure in the end that he is money in by trading at home, besides the growth of friendship between the merchant and his customer and the satisfaction of helping along your own town. Take your home paper, patronize your home merchant, circulate your cash as much as possible where you will have a chance of getting it again.

"There is not a doubt that many times people send their money to the departmental stores when it could be spent just as well at home. In fact, people in this neighborhood have been known to pay more for goods in Toronto than the same article would cost in St. Mary's. The reason for this is not that the local buyers do not like to leave their money with the home merchants. Money goes to Toronto because the senders imagine they are getting extra value. They read the department store advertisements and when in need of goods advertised send for them. One of the most successful country merchants in Ontario recently told the writer that the trade of the departmental stores had fallen off almost altogether in his vicinity. This result he ascribed to his advertising. "People were sending their money to Toronto," he said, "because they did not know we could sell here as cheaply as they do in the city. There is not a dollar sent away from here now for every ten that went away a few years ago." His method of advertising is simply telling the people of the goods he handles and the prices at which they may be purchased. The advertisements are carefully written and are just as readable as any other part of the paper. In this age of the world no merchant who makes success his watchword can afford to overlook this part of his business. If he neglects it the dollars he would otherwise get will go to his more enterprising competitors either at home or in the distant city."

Prices Compared.

The Journal backs the above up with a two-column article in which he took certain articles from Eaton's catalogue and compared the prices quoted therein with those asked by St. Mary's merchants.

For instance, on page 49 (No. E2-400) of Eaton's picture book the cheapest coon coat was priced at $50. Lofft's price at St. Mary's was $47.50. On page 68, item "E3-139," was quoted at $4.39. The St. Mary's price was $4 And so on all through a long list of groceries, dry goods, jewelry, etc. Coming down to hardware, the Journal editor says :

A farmer came into one of our hardware firms the other days and after looking around for a minute asked, 'How much is that axe ?"

"$1.25," replied the merchant.

"Why, I can get that axe at one of the Toronto departmental stores for 95 cents." said the disgusted farmer.

"I'll sell it to you at 95 cents, on the same terms as the departmental store." replied the merchant.

"I'll take it, then," was the quick response.

"All right," said the hardwareman, holding the axe in his hand.

"Give me 25 cents for express,
Give me 2 cents for postage,
Give me 3 cents for money order,
Give me 95 cents for the axe.

$1.25.

"Now, call in a week and I'll give you the axe."

Did the farmer see the point ?

Do you see it ?

If you do, buy your goods in your own town, select them with your own eyes, buy them on your own terms and take them home with you on the same day.

* * *

Opening his Toronto paper the other day a St. Mary's hardware merchant noticed that Victor flour sifters were being sold at a special price of 12 cents. The St. Mary's merchant had never sold one for more than 10 cents.

* * *

On page 276 of the Eaton catalogue is the Crown Huron stove, which is also being advertised in the Toronto papers as a special bargain, laid down at St. Mary's or any other station for $39 cash. The St. Mary's Hardware Co. carry the same stove, which may be seen on their main floor and which they sell any old day for $38 with 5 per cent. off for cash. They take that stove to the purchaser's home in the country and set it up for him and leave it with him for 30 days on trial. Compare the two bargains,

The Catalogue Merchant,
Gets from you $39 in advance.
Gives you therefor the stove at St. Mary's depot.
The Home Merchant,
Gives you the stove,
Carts it to your home,
Sets it up,
Leaves it a month on trial,
Waits for the money 30 days,
Returns you $1.90 for cash,
And charges you but $38 to begin with.

And yet to many buyers distant pastures look green. In many cases they are not as green as the buyers.

HONORS FOR PRESIDENT SCOTT

Speaking of the re-election of W. G. Scott as water commissioner of Mount Forest, and his nomination as mayor, (which he declined), the Mount Forest Confederate of Jan. 2 says :

"Commissioners Cook and Scott ably gave a splendid showing of their labors. The past year the electric light and waterworks have not only been able to meet expenses and pay principal and interest on their debentures, but there is a surplus of over $1,100. No wonder Mr. Scott got the tribute of a double nomination and election by acclamation."

DEPARTMENTAL STORE PAPERS.

The following extract from the last issue of White's Class Advertising shows how completely the Chicago papers carry out the wishes of their largest advertisers, the departmental stores :

"We have recently witnessed a striking evidence of the influence of the State street merchants in this city. Until the last few days of November, the daily papers talked every day of the scarcity of money, and the bankers wagged their heads lugubriously in every interview, though with cheerful hopes for the future, if everyone would be good. During the last week in November, however, the Christmas shopping usually begins in Chicago, and this year it started off very lightly. The big State St. merchants, with their stores full of holiday merchandise, bought last spring, began to get scared on their own part, and decided to take a hand in the financial situation. So, bright and early on Saturday morning, November 30, the Chicago papers came out with the most cheering stories of how clear the skies were, how the town was full of people here to attend the live stock show, all with money, how the banks had plenty of cash and would just as soon hand out real money as look at you, how everyone had money and it was going to be a bully good Christmas, so it was. And now, until after the holiday advertising season is over, the Chicago papers wouldn't publish a blue story for love or money."

Layfield and Williams, Vancouver, B.C., have been granted a permit for the erection of a market; cost, $26,500.

PUBLISHED EVERY SATURDAY.

NEXT MONTH'S CONVENTION.

Announcement will be made next week of the date of the annual convention of the Ontario Retail Hardware Association. The dates will be during the second week in February, when single fare and fare-and--one-third rates will be obtainable on all railways.

Retailers are urged to arrange their stocktaking dates so as not to conflict with the convention. Many are already doing this work, taking advantage of the slackness of trade during January to prepare for the coming year's trade.

The convention this year bids fair to be the best in the history of the association. The social features alone will be worth the cost of the trip to Toronto, while, in addition, the business of the convention and the "question box" discussion will be well worth listening to or participating in. Ideas worth tens of dollars can be picked up in a few minutes from other retailers at the convention.

SET THE DATES ON MONDAY.

A matter brought up at the annual meeting of the Canadian Commercial Travelers' Association last week is worthy of consideration by the powers that be. The travelers suggest and will try to arrange that the dates of Thanksgiving Day and of at least general elections be set so as to give them a chance to take advantage of the privileges enjoyed by the "non-drumming" public. The travelers are at home at the end of the week but Monday seems to be the day which would be most satisfactory.

The request seems only a just one. Th travelers are away from their homes and families all week and where such an arrangement is possible should be permitted to spend an extra day at home instead of idling at some point on the road. There are now over 22,000 travelers in Canada, a class which is large enough to demand, and to deserve that its requests should receive consideration.

SOME NEW YEAR'S ADVICE.

The man who does his work right is bound to get the head position because he has so little competition. In every line indifference and worthlessness are more in evidence than ability and worth to handle a business with willingness and despatch.

Consider the man who has brains and uses them to his employer's interest. This man is bound to be recognized as by close attention to work in working hours he will often stand out alone and sooner or later will attract the attention of his employer. So many young fellows are in the business because they must have money for their pleasures and excesses that the man who is interested in his work must surely rise to the responsible position. To build business—to sell goods or to manufacture them—these are the things, and the future of the man who will do his duty is assured.

Consider the man who feels himself above his work. He is getting perhaps ten dollars a week. He hasn't any new ideas for getting business and no ideal other than dressing above his income and shining in certain "social events" for the silly crowd of girls and men who make up his acquaintance.

He wonders why his neighbor is earning fifty or seventy-five dollars a week and because he refuses to see things right puts it down to pull. Pull sometimes helps a man to a position but "results" must be shown to hold a place.

Learn to do your work with your whole heart. During business hours keep your mind on your work and by absorbing such knowledge as will come your way you will not only find your work a pleasure but will fit yourself for a better position in the end.

This policy will, if followed, meet with success whether you are running your own business or working for another. Try to get in a line for which you have a natural liking; pay strict attention to business and your future is assured.

THE ABOLITION OF CREDIT.

No more insistent problem confronts the retailer in Canada than the elimination of bad debts, and there is but one solution—the abolition of credit.

In the last generation the methods of business have entirely changed. Transportation systems have annihilated distances; catalogues have supplemented samples, and the facilities for doing every kind of business have increased enormously.

When we consider the conditions on the North American continent, the great momentum that exchange or trade has acquired is easily explained. Nearly one hundred million of the most energetic people on the earth are engaged for the most part in business, each animated with an intense desire to produce—a people to whom Carlyle's essay on work would be superfluous reading.

Holding the commanding position in this vast army of workers are the huge consolidations or trusts with practically unlimited resources. These shade down to the small joint stock companies, which, as a rule, are one man companies, and at the end of the chain we have the final distributor, the retailer.

As a matter of simple reason it would be logical to suppose that the conditions of credit exacted so vigorously by the trusts would be carried through all ranks of the commercial world, but the reverse is the case, and we find that the last link of the chain is weakest, and the retailer smallest in resources is the one most lax in the respect to his credit.

Examine the bad or doubtful accounts of our large institutions which issue annual statements and note the comparatively insignificant proportions compared with business transacted. The writer has in mind a huge industrial concern whose bad debts amounted to one thousandth part of one per cent. two years ago. We venture to say that not one retailer in America, doing a credit business, could make such a showing.

During the early periods of the country, when trade was not highly organized, credit may have been necessary, but to-day it is more than unnecessary—it is suicidal.

If the retailer wishes to be a leader, and if he desires to serve the entire trade of his district he must rigorously exact the cash payment, otherwise the mail order house, the larger centres, will absorb the best of his trade, and he earns, instead of a competency, a bare living, instead of an establishment, a precarious business.

THE SITUATION IN THE WEST

By our Special Winnipeg Correspondent.

Everyone has settled down to dating their letters 1908, except when they forget, and matters are moving along smoothly, and with fair satisfaction. The pessimists are feeling themselves carefully all over to see whether they are all there, as few, if any, of their predictions for the end of the year have come true. Of course January and February have to be passed before there can be any real shouting, but there is a better and healthier tone in the city today than there has been for the last three months. It is going, as has been stated all along in these articles, to be a strain and a squeeze, but the West is all right and no one has been very seriously hurt. One wholesale meat dealer remarked last week that things were better than he expected. Have you evened up to last year? was asked, "Last year, I should say so," he replied. "Our December business is $40,000 better than December of 1906, and what is more, we will not have more than three accounts unpaid on December 31st." How do you account for it? "Simply because we have gone after the business harder and been more careful to see that men did not run long accounts." It might be stated that the turnover of December, 1906, for this house was over $200,000.

With the close of the year figures are to hand as to the amount of crop marketed and inspected during the four months of the present crop year, now completed, and these figures show that there is an unusually small amount of wheat in farmers' hands for this season. Returns to date are about as follows:

Wheat marketed in interior elevators	35,874,000
In border towns for shipment south, in bond, about	2,500,000
Required for seed	10,000,000
Required for milling west of Winnipeg	6,000,000
Total wheat accounted for	54,374,000

Taking the C.P.R. estimate of 70,144,928 bushels of wheat this would leave 15,770,928 bushels still in farmers' hands, but it is doubtful if the C.P.R. would make the same estimate to-day. The Free Press supplementary estimate of 62,000,000 to 63,000,000 is probably the most nearly correct, and this would leave only 7,000,000 or 8,000,000 still in farmers' hands for sale. In spite of frost and drought, and too much rain in some sections, the crop already forward has graded well, fully two-thirds going nearer four and better, while of the 28,864 cars inspected, 12,574 went contract grade. It is admitted, however, that the best of the wheat, with the exception of what has been retained for seed, is all forward, and that low grade is all that may be looked for, that is, there is practically no more milling wheat to come forward, beyond what has been set apart for interior mills.

The demand for all grades of wheat has continued good all week, with offerings very light. Feed wheat was especially active and demand forced the price 3c higher on the Saturday market that grade closing at 51½, Fort William, and No. 2 feed at 47. Nos. 4, 5 and 6 also show an increasing demand, and prices are relatively very high, No. 4 being sold at 91½c; No. 5 at 78½c, and No. 6 at 60c. Receipts of wheat are keeping up very well, and the amount in interior elevators is very small, compared with other years, while the percentage of the crop actually reaching the lake front is the largest in many years.

The returns from live stock, although they cannot be said to be a disappointment, as after last winter little was expected, are still regrettable in many ways. Export has suffered the most dropping from over 85,000 head in 1906 to 48,905 in 1907. Of this number, some 5,000 were exported to Chicago. On the other hand, there has been a largely increased consumption of butchers' cattle, the figures jumping from 40,897 in 1906 to 48,651 in 1907, and the price of butchers' cattle was higher for the year, the grand average being $3.91½, as against $3.55 per cwt. paid in June. The receipts of hogs show a slight decrease, and the average price for the year was only $6.79 per cwt., against $7.11 last year. For the first six months of 1907 the average price for hogs was $7.50 per cwt., but the heavy slump of the Chicago market had the effect of dropping prices here so that the average for the month of November was $5.65, and for December, $4.90. Total receipts for the year were 81,629; for 1906, 82,051, and for 1905, 70,239. Winnipeg's packing capacity is 450,000 hogs per year, so that it gives a faint idea of the enormous amount of bacon and ham that has to be imported to make up the deficiency. This is liable to be greater than ever for next year, as many farmers, disgusted with the drop in prices, and being offered large prices for their feed, have sold out everything.

Outside of grain and cattle, the question that has occupied the stage in Winnipeg this week is the purchase of the Bell Telephone System by the Provincial Government. It is early days yet to talk of the contract and whether the bargain is good or bad, for the public, of course, is not in a position to easily estimate just what such a system may be worth. Taving had some practical knowledge of the outlay of the company up to 1895, the writer of this article inclines to the opinion that every thing considered, the price of $3,300,000 is not excessive. The crux of the situation is whether or not the thing will be well managed. Taken as a whole, the people of the West incline to government ownership of telephones, the Roblin Government made very lavish promises when they inaugurated their telephone policy and promised greatly reduced rates. It remains to be seen whether they will live up to those promises under the new arrangement, there is now no opposition to hold them in check. If the operation is successful and cheaper, it will be a very strong argument in favor of government control of other utilities.

Reports of committees are the order of the day. One of those of vital interest to business men is the report of the committee on "Business Tax," which recommended that retailers and manufacturers pay about one-third of the amount they are now paying, that the tax on wholesale houses remain unchanged, but that departmental stores be included with them, these recommendations are radical in character. It is hoped that some definite arrangement will be arrived at, as for years this question of the business tax has been a source of annoyance and bickering.

Two of the recommendations of the committee are that an assessment commission consisting of three members be appointed who shall revise, examine into and compare the returns of the assessment commissioner and proceed to equalize the same so that each tract or lot of real property and business assessment shall be entered on the assessment roll at its true and fair value, and that the city apply to the legislature to secure power to deal with its own business tax without having the rate fixed by statute as at present.

The purchase of the Crown Bank by the Northern Bank is the last important business announcement of the week. The West looks with particular interest and favor on the doings of the Northern Bank, which is practically the first home bank of the West, and has made a remarkably good record for the time it has been open. The head office of the combined banks will, of course, be in Winnipeg, but the name will be changed to that of the Northern Crown Bank. In the two years of its operation the Northern Bank has opened 47 branches in the West, and as the Crown Bank has 24 branches all told, there will be 71 branches under the control of the new bank. Sir Daniel McMillan will remain president, and Mr. O'Grady, formerly general manager of the Northern, will be general manager of the Northern Crown Bank.

This combination will have the effect of drawing the East and West closer together, a most desirable thing in regard to out-banking institutions.

A method of producing castings has been patented by George Hale Brabrook, Taunton, Mass. It covers a process of making castings, such as ornamental bronze placques and similar articles, without flaw. The new invention uses amorphous or red phosphorus, which, when the mold is ready to receive the molten metal, is sprinkled in a thin layer within the cavity of the mold, so that the metal will come in contact with it when poured. Or the phosphorus may be mixed with kerosene oil and then the mixture sprayed onto the mold. The idea is to keep the metal sufficiently fluid to fill the mold well.

Markets and Correspondence

(For detailed prices see Current Market Quotations, page 72.)

MARKETS IN BRIEF.

Montreal.

Copper—Advance of ¼c.
Ingot Tin—Steady at $31.50.
Lead—Still at $4.50.
Antimony—No change.
Heavy Scrap Lead—¼c. lower.
Nails—Cut of 10c per keg.

Toronto.

Copper Kettles—Now 45 off.
Copper Pitts—Declined to 30 off.
Shot—Now 20 off.
Red Lead—Prices lower.
Turpentine—Advancing.
Copper—Firmer.
Lead—Steady.
Tin—Unchanged.

MONTREAL HARDWARE MARKETS

Montreal, Jan. 10.—A period of marking time has now set in for the hardware trade. Stocktaking is over and the travelers are out on the road and beginning to book their orders for spring delivery. For the present, therefore, there is very little doing, but next week should see a great change for the better. Stocks in most localities are light and when trade does open there is every reason to anticipate a good, healthy demand.

Dealers must not forget that manufacturers have been curtailing their output somewhat, and therefore it would be wise to order early and not wait until the last minute. The year is opening out in good shape. Travelers are confident as to the prospects and therefore there is every reason to believe that the belated retailer may find himself in an awkward position. With the last fall of snow the roads are in good condition, and the country trade is improving in consequence. Collections are fair, and altogether the outlook is promising for a good stimulation to trade within the next week or so.

Lumbermen's Supplies—Fair orders are coming in for immediate delivery, although the total is not quite so good as last year. Prospects are not so promising in this department as lumber concerns are not pushing operations so freely, owing to the financial situation. A greater number of men have gone into the bush than was at one time anticipated, but the scale of wage being lower than it was last year, the total is not up to average. Canthooks and peavies are being ordered in fair quantities for future deliveries.

Railroad Supplies—Owing to the railroad construction work going on in different sections of the country, there is a good demand for shovels, picks, blasting powder, and drill steel.

Nails—Prices in nails are somewhat lower this week, there being a reduction of 10c per keg. This cutting has not been brought about by the cost of raw material, which is still stiff, but by price competition amongst the makers. We now quote: $2.10 base, f.o.b., Montreal. The demand is fair for future delivery.

Axes and Crosscut Saws—A fair number of orders are being booked and now that the country roads are in better shape, an improvement in the demand is expected. Prices are firm.

Sporting Goods—The various lines are moving sluggishly, and but few sorting orders are coming in. Skates have moved freely, but dealers are now fully stocked in toboggans, snowshoes, and hockey sticks.

Screws—The situation is dull and unchanged. Until the season opens up there will be little demand and the factories are getting a fine opportunity to put themselves in better shape. The shortage which existed last year was greatly felt by the dealer.

TORONTO HARDWARE MARKETS.

Toronto, Jan. 9.—The hardware jobbers are optimistic over the prospects for business during 1908. Stocktaking is over and the travelers have returned to their districts, after spending the holidays at headquarters. Several commodities have undergone slight changes during the week.

The spring goods are beginning to sell and booking for all these lines has received a satisfactory start. Price sheets and catalogues are the order of the day and the revised prices will be issued in a short time.

Booking for poultry netting is very good and present indications point to a sharp demand. The B. Greening Wire Company, Hamilton, have issued the following price list for spring. 2-inch mesh: Width in inches—12, 18, 24, 30, 36, 42, 48, 60, 72, 84 and 96. Price per roll of 50 yards—$1.80, $2.65, $3.40, $4, $4.75, $5.50, $6.20, $7.70, $9.20, $10.50, $12. It will be seen by the above that prices are considerably higher than last year's list, owing to the increased cost of material and manufacturing. The other sizes have similarly advanced in price.

Builders' Hardware and Supplies—These lines are beginning to move again after a lapse of several months, and booking for future delivery has received a start. An enormous call was made for these goods during 1907 and the prospects are that the business will again be satisfactory to the trade.

Curling Stones—The demand for curling stones has been exceptionally good this season, owing to the formation of many new clubs throughout the country. The Toronto price of stones runs about $17.50, with 10 per cent. off.

Shot—Following the fluctuations in the price of lead the discount on shot has increased from 10 to 20 per cent.

Solder and Soldering Irons—The demand has been increased by the decrease in the price lists. ½ to 1½ pound irons are now quoted at 40 cents, up to 2 pounds, and 37 cents over 2 pounds. Solder has also decreased, half and half being now 20 cents.

Copper and Brass Goods — Copper pitts have declined from 20 to 30 per cent. off and teapots have declined from 37½ to 45 per cent. off list.

Bolts and Nuts—The demand for bolts and nuts is still slow, though some booking is going on for spring delivery.

Screws—Screws are steady at present, there being no change in prices. Booking for futures is well under way and the market at present is well stocked.

Sporting Goods—The sporting goods trade is slow at present, owing principally to the lack of snow. Hockey goods have been in good demand all season and the returns are large.

MONTREAL METAL MARKETS.

Montreal, Jan. 10.—The metal market is dull as the reaction of the holidays is still being felt. Buying has been stimulated by the upward trend of prices, but not to any great extent, and the holding off so noticeable in the last few months still continues. It is evident that this cautiousness will be continued for some time, for although confidence seems to be returning to a certain degree, there is still the feeling that the markets must prove their stability before buyers open up freely. Therefore, although we look for an increase in the demand, it will be of slow growth, which is, after all, a matter of congratulation. A sudden inflation of prices with a possible reaction, would leave things in a worse condition than they were in the dark month of December. Producers are helping to steady the market by making nothing which has not been absolutely ordered, and which the buyer is ready to take at once. They are determined that prices shall not be cut to tempt buying, but to let the needs of the people create a demand, relying upon one salient fact that purchasing must improve for the simple reason that it could not be worse than it was in December.

Pig Iron—This metal is very quiet. Inquiries are indefinite, and beyond a few carloads moving from stock, there is nothing doing. Finished materials have weakened somewhat owing to a shading in pig iron, and on several lines there has been a cut in prices. As, however, there is no great accumulation of stocks by producers, a strengthening in the situation is expected when inquiries open out freely. There has been a cut of prices in the Old Country and we now quote Cleveland warrants 48s 9d. Prices locally are firm at: Middlesboro No. 1, $21.50; No. 3, $20.50; Summerlee, $25,58.

Copper—Copper has strengthened all the way round, and there seems to be some reason for the general belief that the rallying point has come with the New Year. There is a natural hesitancy in looking far ahead, and the price at present ruling locally, therefore, is not so sharply defined as it might be. There has been a stiffening, however, of ¼c, and we now quote 15c for casting ingots.

Ingot Tin—Tin has improved in the English market, and it looks as if a steady course of improvement had set in. There is still a premium of £1 per

ton on futures over spot. Although this upward tendency has strengthened the market here, quotations for large lots are still $31.50, with a stiffer price for small quantities.

Lead.—Although the English market shows an advance, being now £1 10s higher than the lowest point reached in the recent decline, there is no confidence placed in the situation, and in consequence the Old Country improvement has not strengthened prices in a relative degree here. We quote lead at 4½c, the price obtaining the previous week.

Antimony—There is no change in the market at present. Buying has improved for future deliveries, probably owing to the low price prevailing, Antimony certainly looks very cheap at present figures.

Spelter—Spelter continues to improve, and is now quoted higher, both in the foreign and American markets. There is, however, at present no change in the local price.

Old Materials—The market is still very dead. Buying is at a standstill, and no improvement is expected until the markets generally open out. There has been a shading in lead. We quote: Heavy copper and wire, 11½c; light copper 10c; heavy red brass 11c; heavy lead, 2½c; wrought iron, $12; No. 1 cast $13; No. 2 cast, $10.

TORONTO METAL MARKETS.

Toronto, Jan. 10.—It is too soon after the holidays for any marked change to be noticed but indications point to a realization of the hopes of jobbers that a buying movement will develop before the end of January. The continued fluctuations in the foreign markets do not tend, however, to strengthen the jobbers' position, although on the whole a general firming up is noticeable. As we have pointed out before—once a buying movement commences prices will be moved up a few points.

Pig Iron—While there are no changes to report the opinion of one large buyer in Toronto is that No. 2 foundry iron will settle to about $20 during the year with No. 3 English about a dollar less. Jobbers are holding firm, however, and last week's figures of $22.50 for Canadian and $21 for No. 3 Middlesboro still rule.

Ingot Tin—The principal feature in tin since the opening of the year 1908 has been the resumption of liquidation by the Chinese syndicate. It is variously estimated that the Straits and London interests combined still hold about 4,000 tons of tin, two-thirds of which is still probably at the Straits and the other third at London. Stocks at London at the close of the year were unusually heavy, being 5,622 tons, as compared with 2,481 tons at the close of 1906, while in the United States stocks were only 1,094 tons, against 2,122 tons at the close of 1906.

United States tin consumers have raised a protest because the United States Steel Corporation has sold to Welsh tin plate makers 100,000 tons of sheet and tin plate bars at ten dollars a ton cheaper than they are quoting manufacturers in the United States. Incidentally, the manufacturers of tin plate and sheets are chafing because they are unable to get steel bars at a price commensurate with prevailing conditions. Advocates of free trade have taken the incident as an argument for a reduction of iron and steel tariffs, which enable the United States Steel Corporation to hold up the American steel makers for $29 per ton, while the same product is laid down in Swansea at $21.90. The cost of transporting the bars to Wales is about $4.10 per ton, so that the actual price received f.o.b. Pittsburg is $17.80 per ton, as against $29 per ton quoted American mills in the Pittsburg district.

The resumption of 47 tin mills of the American Sheet & Tin Plate Company makes 97 mills belonging to this company in operation. This leaves, however, 145 mills idle, and of the 110 mills that belong to independent companies probably a smaller proportion will be active, so that consumption of tin in January is not likely to be greatly increased unless the expected reduction in the price of tin plate brings a rush of buying orders.

We still quote $31.50 for ingot tin.

Copper—Large shipments to Europe continue and foreign stocks must be heavy as the metal is not all going into consumption. Prices locally continue at 14½ to 15c.

Lead—A stronger tone has developed and quotations as high as 4½c are now made.

Antimony, zinc and spelter remain unchanged.

Old Materials—There has not been enough doing to establish new prices and the market continues weak.

LONDON, ENG., METAL MARKETS.

London, Jan. 7.—Cleveland warrants are quoted at 48s. 7½d., making prices as compared with last week, 4½d. higher.

Copper—Spot copper opened firm at £62 12s. 6d., futures at £63 5s., and after sales of 400 tons of spot and 800 tons of futures, closed firm at £62 15s. for spot and £63 10s. for futures, making price as compared with last week, 15s. higher on spot and futures.

Tin—Spot tin opened firm at £123 7s. 6d., futures at £124 10s., and after sales of 180 tons of spot and 600 tons of futures closed steady at £123 5s. for spot and £124 5s. for futures, making price as compared with last week, 5s. lower on spot and futures.

Spelter—The market closed at £19 10s., making price as compared with last week, unchanged.

Lead—The market closed at £14 10s., making price as compared with last week, 10s. higher.

U. S. METAL MARKETS.

Cleveland, O., Jan. 8.—The Iron Trade Review says: In the calendar year, 1907, there was produced by the blast furnaces of the United States a grand total of 25,299,732 tons of coke and anthracite pig iron, according to the complete returns. This make compares with a total tonnage of 24,874,184 in 1906, or a net gain of 425,548 tons. With annual charcoal iron production in excess of 400,000 tons, the total all pig iron output of the country in 1907 was approximately 25,750,000 tons.

Pig iron making began in 1907 at a high-record pace which increased as the year advanced and was then maintained without material variation for a period of 10 months. In March, a condition of floods in the Pittsburg district forced the banking of numerous stacks and diminished production accordingly. The first appreciable slump in the rate of output, however, came in November with the depression that fell upon all branches of the iron and steel industry and this grew even more marked in December, bringing the year, so suspiciously begun, to a close, characterized by a minimum production. In November and December the combined make was about 3,064,291 tons or about 69 per cent. of the average production in two of the preceding 10 months.

The low mark of the year in monthly blast furnace production in the United States was touched in December, when a total of 1,234,733 tons of coke pig iron were made. This compares with a total of 1,820,558 tons in November, a loss of 585,825 tons and with 2,359,690 tons in October, a loss of 1,124,957 tons.

U. S. IRON AND METAL TRADES.

New York, Jan. 9.—The Iron Age today says: To drop within less than three months from a rate of production of pig iron of 27,000,000 tons per annum to a rate of 12,000,000 tons on the first of January is what the industry has accomplished. It shows how thoroughly manufacturers have been imbued with the conviction that it is wiser to meet changed conditions rather than continue in the hope of early betterment and pile iron in the interval.

The returns show that the production of coke and anthracite pig iron during December was 1,234,279 gross tons, as compared with 1,828,125 tons in November and 2,336,972 tons in October. While there were 226 furnaces in blast on December 1, with a capacity of 347,372 tons per week, there were only 149 furnaces in operation at the opening of the current year, with a capacity of 232,652 tons, which is practically at the rate of 1,000,000 tons per month.

The output of the steel companies, which was 1,514,521 tons in October, fell to 659,459 tons in December. The merchant furnaces which lagged at first in adjusting themselves are now following suit. Their production was 822,451 tons in October, fell only to 744,011 tons in November, but dropped to 574,820 tons in December. During that interval there was some accumulation of metal. These figures are significant because they reflect closely the attitude and the action of the whole industry.

The majority of pig iron makers have withdrawn the lowest quotations which they have recently made, and the markets are firmer, although there are still some isolated sellers at former figures. Thus the leading southern producers are

asking $13.50 for No. 2. Foundry at Birmingham, and eastern furnace men are quoting $18.25 for No. 2 in the Philadelphia district, $17.75 to pipe foundries on the Delaware River, $18.50 at Jersey City and $19.50 in New England. Basic is quoted $17.25, delivered.

There has been more business in the leading distributing centres, both in foundry irons and in basic pig, and inquiries are more numerous, but the quantities involved are not large.

Reports from the finishing mills are rather discouraging. There has been some accumulation of orders, justifying temporary resumption of operations, but no really important new business has been booked. The rail trade is dull and the irregularity of prices in light rails seems to foreshadow lower prices. The structural mills have a little business in sight, among which is a 4,000 ton inquiry from the New York Central for terminal work, and the first instalment of 1,500 tons out of a total of 4,000 tons for the New Haven viaduct at Providence.

The leading interests have announced a reduction in prices of blue annealed sheets of $1 per net ton, of black sheets $2 per ton, except Nos. 29 and 30, which are down $3 per ton, of galvanized sheets $4 per ton, except Nos. 29 and 30, which are lowered $6 per ton, of painted roofing sheets 10 cents per square, and of galvanized roofing sheets of 15 cents a square. The larger reductions in galvanized material are due to the decline in spelter. The lower price of pig tin has led to a reduction of 20c per box in the price of tin plate.

In the Connellsville coke district product has been cut down in a manner unprecedented in the history of the industry. The wages have just been restored to the figures prevailing before the last advance in March of last year. Prices are weak and standard Connellsville furnace coke is being offered at $1.90, at oven.

Copper is steadier and first hands are asking 14c. for both electrolytic and lake, which second hands are shading slightly.

NEW GLASS FACTORY.

Hardware and Metal was somewhat surprised a few days ago to receive an invitation from Messrs. Hill and Rutherford, to inspect the new plant of the Toronto Plate Glass Importing Company. It seemed such a short time since we had seen their magnificent works on Victoria street a mass of flames, that we hardly thought it possible they could have recovered so completely in so short a time.

The new factory is a one-storey building, and is built of stone and brick. The average height of the roof is 18 feet, carried by columns 28 feet apart. It has a frontage on the Don roadway, (Don bridge, Queen street east), Toronto, of 292 feet, with a depth of 123 feet. As will be seen by illustration on another page, the building is extremely well lighted on all sides, the windows being 12 feet high by 11 feet wide. The boiler house is situated in the centre of the main frontage, over which is built the laboratory for the manufacture of material used in silvering mirrors. The vacuum system of steam heating was installed by the Toronto Furnace Company, who also looked after the plumbing.

Fire Protection.

A most efficient sprinkler system has been installed, carrying over 800 sprinkler heads. These are supplied by 8-inch water mains, with the city water service constantly turned on, so that it would be impossible for a fire to gain any headway. A 40,000-gallon water tank situated 30 feet above the building has been installed for use in emergency, if for any reason the city water service should fail.

Shipping Facilities.

The floor level of the whole building is raised 3 feet 6 inches, thus bringing the shipping door on a level with the lorries. For the handling of large cases of plate glass, with ease and safety, a powerful overhead traveling crane, 14 feet wide by 14 feet high, is used. It extends 15 feet over the shipping door entrance, and runs back 134 feet inside the building.

New Machines.

All the glass grinding, smoothing, bevelling and polishing machines are new, and made with many improvements suggested by long experience. The Toronto Plate Glass Importing Company have their own machine shop, and all their new machines have been designed and made by their own experts. The floors are concrete throughout, in which are sunk underground gullies, through which is transmitted the driving power to the machinery. The underground shafting does away with the necessity of overhead pulleys and belting, and not only saves a great deal of valuable space, but removes one of the most frequent causes of accidents to the men. The motive power is supplied by a 125 h.p. engine, in all making a most efficient and complete plant for the manufacture of mirror and bevelled glass.

A large stock of plate glass is constantly kept on hand, also a complete line of window glass. The firm aims to keep in stock 5,000 boxes of window glass and 250,000 feet of plate glass.

With their increased facilities, they will be able to go more extensively into such lines as fancy and colored, skylight and wired glass, leaded art glass, church windows, ornamented, ground, embossed and cut work. In fact, they have doubled their equipments in these departments.

A number of labor-saving machines and devices have been installed, and the firm will now employ 150 hands.

The glass bending works were not destroyed by fire, and have been in constant operation at 209-213 Victoria St. They bend upwards of 24,000 window panes annually, also the very latest plate glass windows.

Both Mr. Hill and Mr. Rutherford emphasized the fact that their customers had stood by them very loyally after the fire. They intimated, however, that they were now ready to give all their customers that prompt shipment for which they had been noted before their Victoria street plant was burned out. A cordial invitation is extended to the trade throughout Canada to visit the new plant at any time.

The employes of the Northern Engineering and Supply Company's tinsmithing department, Fort William, presented their foreman, Frank Cameron, with a handsome pipe and address on New Year's eve.

HARDWARE TRADE GOSSIP.

Western Canada.

The Moose Jaw Hardware Company, Moose Jaw, has completed the installation of a modern steam heating system with sectional boiler in the Brunswick Hotel, replacing the old hot air system.

Sullivan & Mears, hardware and furniture merchants, Brownlee, Sask., have sold their business to C. W. Gemby.

The North Vancouver Hardware Co. have commenced stocking their new store on Lonsdale Avenue. The store will be a creditable addition to the business section of the city, as it is intended to run the business on a large scale.

Ontario.

At the conclusion of the Port Arthur City Council meeting on Dec. 31, retiring Mayor Clavet, of Marks, Clavet & Dobie, hardware merchants, was presented with an illuminated address, a composite group picture of the first Council and a gold watch and chain, by the citizens, members of the Council and the Electric Railway Commissioners. The Mayor feelingly replied to the presentation.

H. E. Patterson, salesman for Geo. H. Awde, Drayton, was a caller at the Toronto office of Hardware and Metal a few days ago. Mr. Awde, he reports, is steadily regaining the strength lost during his stay in the Guelph hospital last summer, when a foot was amputated as a result of a cut received from broken glass some years before, when connected with the store of Henry Jones, Uxbridge.

Charles Morrison, of the James Morrison Brass Manufacturing Company, Toronto, has been spending a fortnight's holidays at Chicago, his work in the office being taken over by Mr. Hadley, Western Ontario salesman.

Charles E. Paton, of J. W. Paton & Co., hardware merchants, Toronto, was married on Jan. 1 to Miss Adeline Clark, of Fergus.

R. J. Lockhart, manager of the Gurney-Massey Company, Montreal, has been spending a few days in Toronto. He reports a very satisfactory year's trade in heating goods in Quebec Province.

Excavation work has been completed for the large new factory and office building to be erected on Adelaide street near York, Toronto, by the James Morrison Brass Manufacturing Company.

J. J. Kelly, formerly of Goderich, is establishing a stove and tinware business at Charlton, Ont.

Hoey & Ryan, Charlton, Ont., have been succeeded by Malcolm & Ryan.

S. A. McCartney's hardware store, Orangeville, was damaged by fire last week to a considerable extent. The blaze was caused by a defective chimney.

C. W. Clark, hardware merchant, Burk's Falls, has made an assignment for the benefit of his creditors.

The value of permits issued by the city of Toronto during 1907 was $14,225,800, an increase of more than $1,000,000 over 1906.

Quebec and Maritime Provinces

Goods From Wrecked Ocean Liner Have Had Effect on Trade at Halifax—The Mining Industry in Nova Scotia Reviewed — Building Operations at Chatham—Proposed Car Works at St. John.

ST. JOHN.

St. John, N.B., Jan. 7.—As was expected, business has been rather dull since the holiday season and merchants are busy taking stock. In wholesale circles the travelers have started out again on their tours, after spending the holidays at their homes.

* * *

A joint committee of the treasury and safety boards of the common council met on Friday, Jan. 3, to consider the proposals of R. D. Isaacs with reference to establishing car works in St. John. Mr. Isaacs told the committee that a company had been formed and that $460,000 had already been subscribed, $60,000 of which was contributed in New Brunswick. It was proposed to capitalize at from $1,000,000 to $1,500,000, and that no difficulty would be experienced in raising the necessary funds, those principally interested being capitalists in the United States. The intention was to locate in St. John, provided the city would give 16½ acres of land free, exemption from taxes and water rates for twenty years and guarantee bonds of $200,000 to be secured by a first mortgage on the plant and assets of the company. Employment for not less than 400 men would be guaranteed at the start, when in full operation more than 1,000 men. The sum of $250,000 would be paid out annually in wages. Mr. Isaacs mentioned that offers to locate in Peterboro and Hamilton (Ont.) and St. John's (P.Q.) had been received, but the intention was to erect the plant in St. John as a more suitable centre, provided satisfactory arrangements could be made. He asked a definite answer by January 28.

* * *

The Intercolonial Railway authorities have completed the erection of a 100-ton set of scales at Gibson, York Co. The scales, which are as large as any on the Government railway system, rest in a solid concrete foundation.

* * *

The death occurred here on Thursday, Jan. 2, of Oliver J. Pitfield, for many years a noted figure in shipbuilding circles. He was 76 years of age. In the days when wooden shipbuilding was one of St. John's big industries, Mr. Pitfield was one of the city's most prominent citizens. He retired from active business life some years ago. He is survived by his wife, two sons and one daughter.

NEWCASTLE.

Newcastle, N.B., Jan. 6.—During 1907 Chatham, N.B., did a lot of building. The Miramichi Lumber Co. erected a rossing mill, containing twenty-eight rossing machines, and employing sixty persons. A large number of residences, stores and warehouses were built. The exterior of the new Roman Catholic cathedral has been completed. The new opera house, built by St. Michael's R. C. T. Society, is nearing completion. The exterior of Peter Archer's four storey hotel, the Touraine, has also been finished. To the town electric light plant has been added three new tubular boilers, feed pump, two alternators and switchboards, and two brick ells have been added to the power house.

* * *

The York and Carleton Telephone Co. has received its charter. It has a capital stock of $5,000.

* * *

At the coming session of the legislature, Moncton will ask for legislation to construct, operate, or lease a street raily in Moncton city and Shediac; also authority to issue bonds to $35,000 for proposed bonus to the Higgins Shoe Factory.

HALIFAX.

Halifax, N.S., Jan. 6.—The local market is being flooded with wrecked goods from the stranded Canadian Pacific Railway steamer, Mount Temple, and the sales of these goods have a disastrous effect on the legitimate business of the city. Included in the cargo salved is a large quantity of hardware of various kinds, and it is all being disposed of at public auction. In some cases high prices have been obtained for the goods, practically as much as the same class of goods could be purchased for at first hand. In one instance zinc spelter sold for 6½ cents per pound, and the same article can be purchased from any of the hardware stores for the same price, while large quantities can be had at even a lower figure. The goods consist principally of knives, scissors, wrenches, razors and other such lines. Very few of the hardwaremen buy any of the stock offering, but others do, and sell it on a small margin of profit.

* * *

The production of gold in Nova Scotia for the past year is in round figures 13,500 ounces, produced from 620,000 tons of quartz, representing an average of $4.14 from each and every ton of quartz crushed. This production is practically the same as in 1906. Twenty-four mines have been in operation, employing 500 men. In addition to the gold extracted, considerable development work has been carried on. Several mines that have been in continuous operation have only crushed a few months out of the twelve, indeed, one company in operation during the whole year has not yet crushed a ton of ore other than for testing purposes. Foreign capital during the last year or two has been almost wholly directed towards Cobalt, and the several other districts recently opened up, this combined with the scarcity of labor, is undoubtedly one of the chief causes of the inactive condition of the industry when compared with past years. From present indications, a much larger production may be looked for this year.

* * *

John J. Drummond, managing director of the Londonderry Iron & Mining Company, in a review of the business during the past year, says: The general conditions in the mining department in 1907 were about the same as the previous year. Our company is using all native ores (in this we occupy rather a unique position among the iron furnaces of Canada), the only changes being the fact that all our development work is further ahead, and in better shape, than formerly. At the eastern end of our property, close to the Debert River, we have located and opened up a large body of high-grade ore; the balance of our local mines are working about as usual. At the Annapolis Mines, Torbrook, No. 1 shaft, is now producing two hundred tons of ore per day. No. 2 shaft is a new one, developed during the year. It was sunk two hundred feet on a rich vein of red Hematite, and is now producing sixty tons of ore per day on development work only. The general development work at these mines has been carried on steadily on a conservative basis, and during the coming spring we contemplate developing the water power at Nictana Falls, from which point we will get all the necessary power to operate the mines. The blast furnace was closed from June 24 to Sept. 7 for the installation of new machinery and other important improvements. During the balance of the year the furnace has been producing steadily. Owing to the shutdown, the pig iron output for the year will be necessarily small. The demand for iron has fallen off, but we think that with the opening of the New Year, trade is likely to revive to some extent. Owing to the general slump in trade, foreign manufacturers are naturally seeking our market, and are succeeding very well, a large quantity of pig iron is being imported.

CHROMO STEEL FILES.

W. Atkins & Co., Sheffield, have been experimenting with the new special chromo file made by an improved method which has been recently tested at the Sheffield Testing Works with excellent results. One side of the file submitted was dealt with, and the result works out for both sides as follows:—Total strokes, 270,000; strokes per minute, 51; hours at work, 88¼; filings removed, 10½ lbs. The makers claim that this is far in excess of any result known at the present time, and that it represents a very marked advance in the cutting power and durability of files.

TYPE BOOK WITHDRAWN.

The old type book giving samples of type in Hardware and Metal's composing room for the guidance of advertisement writers, has been cancelled, on account of the large quantity of new type put in service, the old type having been discarded. If any of our advertisers are using the old book they will understand that it is no longer of any use.

Reported by Ontario Correspondents

Many Hardwaremen Elected to Municipal Office—The Outlook for 1908 Considered Bright in Many Districts—Novel Guessing Contest at Barrie—Interesting Decision Regarding Assessment Exemptions at Chatham.

KINGSTON.

Kingston, Jan. 8.—The trade has somewhat quieted down after the holiday rush and most of the merchants are now taking stock, while others are taking advantage of the quiet season and are enjoying a well-earned rest. There is, however, quite a business being done in the smaller lines in Kingston. Skates, hockey sticks and other winter sporting goods are in great demand, and, taken altogether, there is quite a brisk business passing for this time of the year.

* * *

J. W. Hunter, machinist, has opened a new general manufacturing and repair machine shop, on Montreal street. Mr. Hunter spent a number of years in the Locomotive Works here.

* * *

Allan Lemmon, of Lemmon & Sons, hardware merchants, who underwent an operation for appendicitis shortly before Christmas, was able to be removed from the hospital to his home on Saturday last, and is now getting on nicely. His many friends will be pleased to see him around again.

* * *

A number of the hardware merchants of Kingston are putting on special January discount sales and are offering great reductions on most lines, in order to clear out the stocks now on hand and be prepared for the new lines ordered for spring.

* * *

The Western Manufacturing Company have opened a branch office here on Brock street, and have issued circulars to advertise their "Western Heaters."

* * *

Much sympathy is being extended to Mr. and Mrs. Hamilton, in the loss of their only child, whose death occurred on Saturday last after a short illness. Mr. Hamilton is one of the partners in the firm of Taylor & Hamilton, hardware merchants.

* * *

Percy B. Chown, of the firm of E. Chown & Sons, hardware merchants, was one of the candidates elected to the Board of Education.

* * *

It would be rather a difficult matter to state what prospects there may be in Kingston, with the opening of spring, as things seem to be a little unsettled at present. There will doubtless be a very late spring here, as the winter has not yet fully set in. Plans have been drawn for several private residences to be commenced as soon as the weather permits, but very little is being done along this line at present, and the dealers cannot give a very definite opinion on the subject until later, when they find what is in store for them and things become a little more settled.

PETERBORO.

There is a by-law in Peterboro to the effect that merchants and others living within a prescribed area must keep the pavement in front of their premises entirely free from snow. The enforcement of the by-law is proving a hard task for the chief of police. Some of the merchants believe that the walking is better when an inch or two of snow is left on the sidewalk and appear to be ruled by their own opinion and not by the by-law. There is considerable discussion over the matter and in some quarters the city council is being censured for passing such a law. The police were kept busy warning merchants after the recent snow storm.

HAMILTON.

Hamilton, Jan. 8.—The result of the municipal elections on Monday was very gratifying to the hardware and plumbing men of this city, three men directly and indirectly involved in these lines of trade, being selected as aldermen by the ratepayers. Those returned were H. G. Wright, of E. T. Wright & Company; Hugh C. Sweeney, stove dealer and tinsmith, and Norman J. Clark, of Adam Clark & Co., plumbers. All three took a prominent part in last year's Council, and Ald. Wright, although he gave notice that he was going to quit municipal life, acceded to the wishes of his friends and entered the field again. That his action was approved of by the public is best known by the fact of his re-election.

* * *

Ald. Sweeney was chairman of the Board of Works last year, one of the most important committees in the Council, and it is almost a certainty that he will receive that chairmanship again this year. Ald. Clark was chairman of the Fire and Water Committee, and under his able management many improvements were made in the Fire and Waterworks Departments. It is a foregone conclusion that he will be appointed to the same committee this year. Ald. Wright occupied the chairmanship of the House of Refuge Committee last year, but it is unlikely that he will occupy the same place this year, and he has no special desire to do so.

* * *

The passing of two by-laws, one to install a municipal street lighting plant and the other to purchase electric pumps for the waterworks system, in connection with the municipal elections, are also matters of considerable importance to the readers of Hardware and Metal in Hamilton, and, in fact, to every person in the community. The first-mentioned by-law was the piece de resistance of the elections and great interest was centred about it. This was due to the fact that the Dominion Power & Transmission Company has a monopoly of the electric market in Hamilton, an advantage which a large portion of the ratepayers sought to remove by the introduction of competition. The passing of the street lighting by-law was equivalent to endorsing the Hydro-Electric Power scheme, and thus it was that a battle royal was waged between the backers of the local power company and the advocates of the government power scheme. The by-law passed with a large majority, and the result will likely be that power users in Hamilton will reap the advantage in lower rates.

* * *

That Hamilton is a safe place as far as fires are concerned is proven by the report of Fire Chief TenEyck for the past year. The total loss by fires was only $85,343.92, or $37,712.50 less than last year. Three fires were responsible for the greater part of the loss, and two of them were at the premises of the Canadian Co-Operative Company and the foundry of Burrow, Stewart & Milne. The amount of insurance over loss was $1,789,120.80.

* * *

The Banwell-Hoxie Wire Fence Company has just completed its gigantic contract of fencing 500 miles of the C.P.R. right-of-way in Manitoba.

* * *

The B. Greening Wire Company has increased its capital from $100,000 to $750,000. This firm has expanded and extended with such rapidity that it has grown to be one of the largest industries in the city.

* * *

The concensus of opinion among a number of hardware and stove dealers with reference to the outlook for this season's trade, was that in view of the condition of the market at present, it was decidedly difficult to give an opinion on the prospects. W. Jamieson, manager of Bowes, Jamieson & Company, while loath to endeavor to size up the situation, observed that he thought the season would be a little late in opening up this year owing to the fact that in some instances the market was overstocked from last season. The opening months of last year were comparatively quiet, and although trade was brisk in the concluding months, it was not sufficiently so to dispose of all the stocks. The result was that the first half of this season will in many cases be consumed in disposing of the balance of last year's stock. Generally speaking, he thought the season should be a good one, at least, that was what his firm was counting on.

George C. Stevenson, of the Burrow, Stewart and Milne firm, thought condition of the Western crops would have a large bearing on the trade, and until it was known how it was going to be, it was almost impossible to give anything like an accurate forcast of the condition of trade. Asked if he thought the financial situation or alleged hard times would be responsible for any setback in the trade, Mr. Stevenson said he did not think it would. So far his firm had not felt the effects of the stringency, and its accounts were being paid with satisfactory regularity.

* * *

Among the retail hardware dealers it is almost impossible to get an expression of opinion of the outlook. There is practically no trade to speak of at present, and as the hardwaremen received such a surprise in the smallness of the Christmas buying, they doubtless feel rather pessimistic about the future. Whatever degree of hard times there is the hardwaremen seem to be receiving the full brunt of the condition, and from the present outlook, the prospects are not very good.

* * *

A large number of factories and wholesale and retail establishments are closed down just now during stock taking operations. There is very little doing in the mercantile line, and the railways report that very little shipping is being done.

ST. CATHARINES.

St. Catharines, Jan. 6.—St. Catharines has lost one of its busiest and best paying manufactories, the automobile works, in which a number of Toronto capitalists are interested, which has closed its doors. The plant has been removed to Toronto, presumably considered a more central point, and with a much larger surrounding to make the concern pay larger dividends. By the stoppage of this plant several hundreds of skilled and well paid mechanics have been thrown out of employment. The company employed skilled labor with a few exceptions.

* * *

Harry Southcott, of Coy Bros. & Southcott, was elected an alderman in St. George's ward on Monday.

* * *

J. H. Crow, hardware merchant, Welland, was elected mayor of that growing town in the recent elections, being returned by acclamation.

GUELPH.

Guelph, January 7.—The election contests were only held in two wards, but they were exciting. Henry Mahoney, of the firm of Mahoney Bros., plumbers, was elected by acclamation, and George Penfold, of S. & G. Penfold, hardware dealers, won out in a hotly contested election in St. Patrick's Ward.

The bylaw authorizing the city council to contract for Niagara Power with the Hydro-Electric Power Commission was carried by 878 majority, the vote being 973 to 95.

The by-law to build a new waterworks was also carried by a big majority. The new works will cost $125,000. The money provides for four miles of 24-inch pipe, land damages, a new cement storage reservoir, covered, with a capacity of 500,000 gallons, at the pumping station; a new 2½ million gallon steam pump, a new boiler, a steel stand pipe, with a capacity of 500,000 gallons, erected in the highest point in the city, with an auxiliary main connecting the stand pipe with the pumping station, and the laying of new mains and house service.

* * *

The fire escapes for the post office have arrived from their makers, the Shipway, Iron, Bell and Wire Co., Toronto, and will be erected immediately.

* * *

T. McLagan, of the Bond Hardware Co., spent New Year's Day at his parents' home, Mitchell.

* * *

Morgan White, of the Bond Hardware Co., is a competitor for the prize of $100 for the most popular man, offered by the Guelph Daily Herald. He has over 44,000 votes and is well up in the competition.

* * *

Joseph Foster, of the Canada Stove Works, Harriston, was sandbagged and robbed of $1,200, a legacy from England.

GALT.

Galt, Jan. 8.—Your Galt correspondent, since his last budget, has interviewed, briefly, the various manufacturers and hardware merchants in town, with a view to ascertaining the prospects for business during the present year. The general feeling was one of optimism, and the general opinion was to the effect that the worst of the financial storm had been safely weathered and that public confidence had been partly, if not wholly, restored.

J. H. LeFavor, of the Canadian Brass Works, manufacturers of plumbers' supplies, said that while the situation had at no time affected his line of business to any extent, the prospects for the future were very bright. Increasing orders were being received and the outlook for the year was all that could be desired.

Mr. Scott, of the Galt Brass Works, said that his company, being recently put into operation, was not in a position to compare the business of other years, but he had unbounded confidence in the possibilities of the year. His venture was meeting with every success and he saw ahead a very prosperous year.

The different plumbers were interviewed, and the general opinion that prevailed was to the effect that nothing need be apprehended in the way of slackness during the year.

* * *

W. J. McMurtry, hardware merchant, said that he had every reason to look forward to an increase in business during the present year. The public had confidence in the situation, and there appeared to be no reason for a decline in any line of the hardware business.

Mr. Tait, of Tait & Brown, successors to Theron Buchanan, was very optimistic, as were also the other dealers interviewed. In a word, the result of the interviews was "unbounded confidence in the future."

* * *

The power by-law carried in Galt by a handsome majority, when the bitter opposition to its passage is considered. The people realized that the measure was in their best interests, and it went.

* * *

Jas. Douglas, of the W. J. McMurtry hardware store, last year a member of the council, was not a candidate this year. By his retirement the trade in Galt is left without a representative on the board. The grocers are this year represented by Mr. Pat Radigan, while Mr. T. A. Rutherford, president of the Retail Merchants' Association, was elected to the public school board.

* * *

A number of merchants are using electric fans, to prevent their windows being frosted. The idea is very satisfactory, and is said to be much superior to the glycerine method.

* * *

Lockhart & Co., plumbers, are busy these days. They have just completed a church contract near Sheffield, and are at present engaged on a large contract in Galt. Mr. Lockhart is an enterprising young citizen and his work gains for him increased patronage.

STRATFORD.

The reports of sickness (smallpox) which have been circulated throughout the country, have to a certain extent injured the trade of local merchants, but during the days just previous to Christmas, there was no indication of any depression in business, as store after store along the main streets was crowded with buyers. The immense market on Saturday brought out a large crowd of people from the surrounding districts and every township in the county had representatives in the city who were all gathered together for one common purpose—that of purchasing Christmas gifts for their friends and relatives, such as could not be secured at the smaller population centres.

LONDON.

London, Jan. 7.—To size up the business outlook just now is rather a difficult matter. Take the stove line, for instance. The season does not properly open until April, and in view of the fact that there is no telling what a month or a week may bring forth, it will at once be seen that to hazard even a guess as to the prospects at present would be premature. Nevertheless, there is in evidence the activity in the foundries usual at this time of the year, so that manufacturers are evidently not looking for hard times. There is this to be said, however, that there must be quite a stock of stoves in dealers' hands for, owing to the panicky feeling aroused by the monetary stringency, combined with the mild win-

ter, many people have been induced to defer buying to a time when new stoves will be needed and there is more certainty as to the industrial outlook.

* * *

As regards the hardware business, those engaged in it speak more freely. For instance, a representative of a well known jobbing house declares that with his firm last year's business was away ahead of that of 1906, and that notwithstanding the talk of hard times and tightness of money, they were carrying fully $10,000 less paper than they had on their hands a year ago. This man, though admitting it was rather early to speak definitely as to the future, was most optimistic. "Mark my words," said he. "1908 will turn out all right." Retailers see nothing of a discouraging nature in the outlook. "Of course," said one of them, "there is no telling how deep-seated the money stringency panic is, but in any event, I can see no reason for taking a gloomy view of the situation. On the contrary, we are preparing for a big season's business and will be much disappointed if we don't make good."

* * *

The election of Ald. Samuel Stevely to the mayoralty of the city is most popular, his majority of over 1,000

MAYOR-ELECT STEVELY, LONDON.

A Stove and Tinware Merchant who has Won the Chief Magistracy of the Forest City.

being one of the largest ever polled in a similar contest here. Mr. Stevely is a native of this county and has lived in the city almost all his life. For many years he has been engaged in the stove and tinware business and has built up a large trade. In addition to serving several years on the board of aldermen he has for some time been a leading spirit in the board of trade, at present holding the office of president of that body. The only other metal men successful in Monday's elections are Alderman-elect George W. Armstrong, manager of the London brass works, and Robert Parsons, the east end hardware merchant.

The Hobbs Manufacturing Company has in contemplation the erection of a large warehouse and manufacturing plant and removal from their present premises, as soon as negotiations between the city and Grand Trunk for the elevation of tracks have been completed. Manager Fields says the delay in settling the matter is causing the company considerable trouble, as they can made no definite move toward the erection of a new warehouse until the city and the railway come to terms. It is proposed to erect a building that will give more floor space than any other in the city.

* * *

A writ for unstated damages has been served on George White & Sons, proprietors of the engine works on King Street west, in behalf of Wm. Westhead. Westhead was employed by the firm as a mechanic, and was, he alleges, attending to his work on Nov. 12, when three steel rollers fell off a truck upon his left foot, crushing it badly.

* * *

The E. Leonard & Sons engine works have been closed down for a couple of weeks, but have started up again with a full quota of workmen—some 180 in all. For the present, eight hours will constitute a day's work.

* * *

There is no truth in the rumor circulated locally that an arrangement had been reached by the Wilcox Manufacturing Company with its creditors and that the firm would shortly resume operations. On the contrary, the estate will be wound up and the plant offered for sale shortly.

CHATHAM.

Chatham, Jan. 7.—One of the hottest election contests in recent years terminated on Monday with the election of Thos. Scullard as mayor, in a three-cornered contest. A gratifying feature of the aldermanic contest was the return of Ald. W. H. Westman, chairman of the industrial committee during 1907 and junior member of the hardware firm of Westman Bros. Mr. Westman is already being spoken of as a mayoralty possibility for 1909.

* * *

J. C. Shaw, of the J. C. Shaw Hardware Co., is mayor of Wallaceburg for 1908. Mr. Shaw has served on the council for several years, and the high esteem of his fellow citizens was shown by his election by acclamation.

* * *

The first week of 1908 has been a very encouraging one for hardware men. While the continued warm weather has, of course, exercised a certain hampering effect on trade, nevertheless, several hardware men report business to be better than it was at the same time last year.

* * *

The death occurred at Blenheim on January 3 of Mrs. J. W. Fleming, wife of the well-known hardware merchant of that place. Mrs. Fleming had been in poor health for a long time, death being hastened by a recent paralytic stroke. Mrs. Fleming came to Blenheim from Dover township a few years ago, when her husband established his present prosperous business. Besides her husband she leaves a grown-up family, two sons being also associated with the firm of J. W. Fleming & Sons.

* * *

A decision of more than passing interest to "exempt" industries throughout Ontario has just been handed down by A Bell, senior county court judge, of this city, with reference to the Wallaceburg Sugar Co.

At the June session of the county council, the assessment equalization by-law added $400,000 to Wallaceburg's assessment. The Sugar City very naturally appealed against this decision. Judge Bell sustained the appeal, with costs. He found, however, that the building and assessable plant were worth $88,700 in excess of their fixed assessment, and this amount he added to Wallaceburg's assessment for county purposes.

When the industry was established the town fixed the assessment at $20,000.

The judge's decision upsets the notion generally prevalent that if a municipality not separate from the county passes a by-law exempting an industry from taxation, the county is bound to exempt it also. In a word, the exemption by-law does not bind the county, and the industry is liable for the county rate on its full assessable value.

* * *

Optimism is the keynote of the opinions expressed by local hardwaremen with reference to the trade outlook for 1908.

And indeed, the outlook for 1908 is to-day fully twenty-five per cent. brighter than it was a month ago. The universal tendency is to look upon the "tight money" cry as a thing of the past, and the conviction is everywhere expressed that the revival in business which has already begun is destined to continue. The scare of last autumn will unquestionably have a beneficial effect. It will introduce into business an element of caution which prosperity did much to drive out. More care will probably be exercised in the matter of credits, and a tendency to limit buying may be looked for. The result, however, will be merely that business will take on a healthier tone. While business in the "gross" will not look so big, taken from the "net" point of view, it will be actually bigger.

Chatham's prosperity depends to a considerable extent upon that of the surrounding country. If the farmers are well off, the merchants benefit; and this is true in hardware as in other lines. Whatever crop shortage there was in 1907 has been largely offset by higher prices. The hard winter which many looked for is not proving as hard as was anticipated; in fact, farmers on the average are as well fixed as could be expected. This item has an encouraging effect on business.

* * *

The industrial outlook here is steadily improving. During December most of the factories in the city either shut down or ran for shorter hours than in the earlier part of the year. This is an invariable rule. In some cases this state of affairs was slightly more pronounced than in previous years; but the annual shut-down, received, in consequence of the prevailing hard times talk, far more attention than it justified. A careful

canvass of the local industrial situation shows that the various industries are once more starting up, just as in previous years, and that the outlook is bright. There will probably be a tendency to limit production to a certain extent. Hence, factories will not run over-time so much as they have done in the past few years. Still, the average workingman's prospects of earning a livelihood will not be appreciably impaired. The opening of the new Wolverine brass factory this month will contribute quite a bit to strengthening confidence in local circles. The company has a large Canadian trade, and the diversion of this business from Grand Rapids to Chatham will benefit this city by just so much. Manager Cornelius anticipates a steady growth in business, and states that he regards the outlook as very encouraging.

The prospects for building during the coming year are good. It is probable that the coming year will in this respect equal 1907, or at least come very near it.

Taken as a whole, the outlook is that, unless a reaction of some sort sets in, the coming year will, as regards the hardware and allied trades, prove in the net result a very satisfactory one.

BARRIE.

Barrie, Jan. 6.—Two local merchants had a good business drawing card in the way of a guessing contest. One merchant had a large glass confectionery jar filled with small white beans, and the person guessing the nearest number of beans in the jar received a handsome china set and likewise the 2nd, 3rd and 4th competitor nearest the number. This scheme proved very good for business. The merchant said that his business was doubled by it.

* * *

In the elections here on Jan. 6. Ald. J. J. Coffey, hardware merchant, was elected second deputy reeve by a majority of 160 in a warm contest, he opposing the proposed local option by-law.

West of the Great Lakes

Saskatoon Iron Works Under New Management—Railway Construction Work Under Way—Prince Albert's Trade Shows Increase.

SASKATOON.

Saskatoon, Jan. 3.—During the week preceding Christmas the stores were open every evening until ten o'clock, as is the usual custom, to allow customers plenty of time to make their purchases. It was most noticeable that the departmental stores received most of the public patronage, being able to supply all the wants of the customer. At times it would seem that little regard was paid to the "financial stringency." At any rate the children were not forgotten, for there was the usual big run on toys and Christmas tree decorations, and hard cash changed hands in considerable quantities.

* * *

Considering everything, the trade of the past year has been fairly good. The first two months of the new year are usually quiet, but with the moving of the wheat and the loosening of the money problem, merchants are looking forward to doing a good business. There is every indication that the coming year will be a busy one in Saskatoon for, apart from private enterprise, the development of the railways is to be considered. Nearly all outside labor has ceased, but we are assured that things will again hum as soon as the weather permits. Besides other buildings in view the courthouse and the post office will receive the contractor's attention at an early date. The plans of the Grand Trunk Pacific regarding Saskatoon have not yet been ascertained, but it is certain that they will spend a considerable sum of money in the city, on buildings of one kind or another. The fact also that this is recognized as a railway centre will not only lead to enquiries, but will lead to the establishing of new businesses. Several carloads of steel arrived within the last few days for the Grand Trunk Pacific bridge. The first span is almost completed, but of late work has been slow, owing to the non-arrival of the material. Four piers yet remain to be finished on the Canadian Pacific bridge. It is expected that this bridge will not be finished for about six months yet, but work still goes on as the pile bridge now in use is not considered of sufficient strength to stand the ice jam in the spring.

* * *

The last meeting of the city council for this year was held on Monday night. Several matters of importance came up for discussion, the chief being the question of the Goose Lake branch of the Canadian Northern Railway into Saskatoon. The company wants to run its line into the city by way of the Crescent, and the owners of this property are asking reimbursement to the amount of fifty per cent. for depreciation in value. The property has been valued by a representative of the company, assisted by a city man, and the company considers fifty per cent. unreasonable. A delegation of the property owners were present and Mayor Wilson stated that if a fair valuation of the property is arrived at, say twenty-five per cent., they would be very short sighted if they did not accept it. The proposed line means much to the Goose Lake farmers, who are blaming the city for causing the delay in the completion of the road. Another important matter was the reading of a letter from the second vice-president of the Canadian Pacific Railway regarding the traffic attachment to their bridge here, which is to cost $20,000. The council discussed the matter and it was decided to accept the offer of the company to pay $20,000 in five year bonds. The telephone franchise question was brought up but was laid over until next meeting.

The plans of the new milling and elevator company have almost been completed. The company is composed of local men and a mill will be erected here. Elevators are planned for different places, but headquarters will be in Saskatoon, and work will commence as soon as weather will permit, in the spring. In the meantime it is the intention of the proprietors to build an elevator at Delisle, another at Zealandia, and one in the vicinity of Lanigan. It is possible that a fourth will be erected on the new line of the Grand Trunk Pacific east of the city at some future date. By establishing these elevators at various points in the vicinity the company will greatly enlarge their field of operations and increase the volume of business in the city here. The fact that all the elevators in this district could not accommodate the crops this year proves that there is ample room for an industry of this kind. It is gratifying to know that local men are at the head of this enterprise, and it is to be hoped that by next fall they will be in shape to help relieve the farmers of their wheat.

* * *

The Saskatoon Iron Works have closed down for a month, owing to the new company taking over the interests of C. Splayford. The works will open on the first of February under the direction of the joint stock company which was organized a few weeks ago.

* * *

Generally speaking, the volume of business done in Prince Albert this year exceeded that of last, although the Christmas trade did not come up to its usual standard. It is the general impression that people did not spend so freely during the holidays as they have done in former years, although a good deal of toys, cutlery and goods suitable for gifts, changed hands.

* * *

Several outbreaks of fire occurred in Battleford last week, supposed to be of incendiary origin. A planing mill and several office buildings were destroyed.

ODDITIES OF GASOLINE.

A gasoline tank rarely explodes. It cannot unless it contains gasoline vapor and air in explosive proportions, which latter condition is almost never present. It does not explode because it contains too little air or too much gasoline. Even if a tank of gasoline were to burst from heat applied to its exterior, the confined heavy gas would not explode if in contact with flame or fire, but would burn instead. A tank of gasoline with no vent could do considerable damage were it to burst and throw burning oil and flaming gas about, but 1,000 gallons of gasoline in a vessel's bilges would not be so dangerous from explosion as a hundredth of that amount. The larger quantity would burn rapidly, while the smaller amount would be sufficient, if mixed with the proper amount of air, to demolish utterly almost any boat.

Taking the Annual Inventory

Various Methods Now in Use by Retail Trade—The Sporting Goods Dealer Tells How Some Retailers Try to Deceive Themselves, Only to Be Fooled Later.

Inventory days come to men in every phase of activity at regular intervals. There is an instinctive desire in men to keep constantly posted as to their latitude and longtitude or, to use a colloquial phrase, to know "where they stand." They must not only be prudent and look forward, but they must also be wise and look backward. They must rid themselves of the obsolete and "worn-out," and free themselves of all encumbrances to step forward into the future. The politician at frequent times in his public career takes an inventory of the various planks in his policy, eliminates one here, adds another there, and therefore preserves that modernity in his policy, a quality that makes all things valuable and attractive. The manufacturer has two things to look after. He must see that his machines are thoroughly up-to-date, that they are turning out the money-bringing product with the minimum flaw production. He must also see that the goods he is making are modern and keep pace with the constantly changing tastes of sportsmen. If any one line of goods is becoming old-fashioned and unseasonable, he must cease producing them, and if there is any superfluous stock he must dispose of it at a minimum loss.

The retail dealer will soon be taking his annual inventory. There are many opinions on how to take an inventory. Any of them that admits of the stock being listed for just what it is worth will do. The main fact is not to deceive one's self. That is the tendency among too many dealers. Most of us like to look on the bright side. After we have worked hard for months we like to see the figures come out on the right side of the ledger. It is impossible to swell the cash. It is impossible to get away from the fact that we owe so much money. But in accounts and notes receivable, in value of stock and value of buildings we get a fine chance to play tricks on ourselves when we are figuring "net profit" and "personal worth." In times when the values of some goods are advancing it is easy to figure the advance too strong. The tendency is to figure the inventory of goods too high, anyway. And the tendency is just as strong to figure some accounts and notes at 100 cents on the dollar that ought to be charged to the profit and loss accounts. And when we come to figure real estate we get strong.

It is not what we hope the goods to bring. That is not the basis for the inventory. It is what they will actually bring. Some dealers take everything at invoice price and figure flat reductions, or changes one way or the other from those figures. That does not arrive a actual value satisfactorily.

Each dealer should know his stock. He can by carefully organizing his clerks have it carefully listed, item by item, and the condition of the goods set down opposite each entry. The pricing of the inventory should be done by the dealer himself. He knows the markets—has a pretty good idea of values. Each article must be judged on its own qualifications. Look the situation squarely in the face and price each item at what you think it will actually bring. That will give you an inventory which will be of some value in figuring the profits of the last six months.

When you get to accounts and notes receivable look the situation squarely in the face again. What accounts are good, what are bad, and what are uncertain? Do you know the hopeless ones? They must go to profit and loss. Have you built a store building, bought a farm, or acquired any other property? Place a just estimate upon it. Don't try to fool yourself. Sooner or later you may have to undeceive yourself and recognize the fact that you have not made as much money as the books showed. It is all very well to talk about the value of a swelled inventory and a swelled financial showing when it comes to exhibiting the books to prospective purchasers of the business. But the swelled inventory is likely to do you more harm before that time arrives than you will ever gain by such methods. Then, too, the man who comes to buy your business is quite likely to be looking for such things in your business showing, and he will discount it. The blanks reproduced herewith are typical of those used by the retail dealer of the present day to take an inventory.

HOLD EVERY CUSTOMER.

To keep the customer should be the aim of every retailer, who should go any length within reason to accomplish this end, says the Hardware Trade.

Every successful merchant has upbuilded his trade by conscientious and consistent effort. Success in merchandising does not come with a rush, it is not the incident of a day but the steady, slow, yet none the less sure growth from day to day, from year to year.

Some of the successful retailers of today have been very close to the slough of despond and have won success through trial and tribulation. Others have progressed steady. The successful merchant will go far to hold a customer—if he is worth the effort.

It must be presumed that every customer with a grievance, fancied or real, is actually honest until such time as the reverse is proven. Grievances must be given careful consideration, not by one of the clerks, but by the head of the house, except where his absence, in a case wherein an immediate decision might be necessary. It is not wise for a merchant to stand in his own light over an argument involving a small amount wherein a good customer is on the opposite side. Even though you may know that you are in the right, it is better to lose a dollar or two than to get into an argument with a good customer, a discussion that would endanger his trade. Moreover, every man and every woman has some influence among those with whom they associate in their neighborhood.

Whenever a complaint is presented, the proprietor or his manager should promise immediate investigation and when the latter is made it should be thorough. There should be no complaint in the matter of accounts. With the system available at the present day, with the autograph duplicating system, each day's record should be very plain. With the duplicate slips, one to the customer and the other to the file, there is little opportunity for error. There is not much exchange or "on approval" business in the country, as compared with the volume in the large cities.

That a merchant should go far to reach an amicable settlement or adjustment on all matters of dispute with their customers, does not mean that a retailer should yield to, extortionate demands, that he should permit himself to be browbeaten or placed at a disadvantage. He should, however, as a home merchant, be especially posted on the standing of every customer. He should know the value of their trade and make concession from what he believes is right only when by so doing he will be the more able to cement pleasant relations with good customers, whose trade is worth having. He should investigate to the fullest extent every claim made and make an honest effort to reach an amicable conclusion. It will inspire confidence on the part of the people with a grievance, and they will approve of your mercantile methods.

"Do not cut off your nose to spite your face." Do not let the difference of a dollar in dispute, drive away a customer doing $50 to $100 business with you every 30 or 60 days. Investigate, convince if you can, but if you cannot, use good common sense in a final agreement. Mistakes are always possible.

Use system in keeping your accounts, use system in handling your cash, in knowing your position when the closing time comes each and every day. If you haven't a good safe, you should have one book with accounts checked up to the close of business, at your home every night. Fires are frequent, and it is hard to collect accounts where the books have been lost.

CATALOGUES.

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

By mentioning HARDWARE AND METAL to show that the writer is in the trade, a copy of these catalogues or other printed matter will be sent by the firms whose addresses are given.

1908 Calendars.

Amongst the calendars for the coming year, received by Hardware and Metal, are a large beautiful girl's head hanger from E. K. Spinney, Yarmouth, N.S.; a "Westward, Ho," scene from Gil. Julian, Ottawa; a blacksmith shop view from Ludger Gravel, Montreal, and pastoral scenes from Purvis Bros., Sudbury, and Carter Bros., Picton.

Pocket Price Book.

D. H. Howden & Co., wholesale hardware, London, have been supplying their customers with a very serviceable pocket price book, indexed, for keeping track of different items and containing a number of list prices of wire, nails, bolts, glass, etc., for handy reference at the back of the book. The books are such as will be appreciated by any hardware merchant receiving a copy.

Accident Insurance Policy.

A novel holiday remembrance sent to the customers of the Galt Art Metal Co., Galt, by that company, was a removable pocket note book in a leather cover, one of the pockets containing an accident insurance policy for $1,000. The souvenir is a costly one, and should be appreciated by all who receive it. The company will be glad to supply samples of their goods to any hardware merchant in Canada who is interested in art metal building material.

EELS AS MOTORS.

It has long been known that electric eels were capable of producing considerable amounts of electricity, and it occurred to some scientists in the tropics to measure this force. Copper wire collars were put about the necks of 100 eels. They were placed in the zinc bath and connections were made between all the collars and a motor. It was found that they generated enough power to run a motor car twenty-four hours. The power from one eel was sufficient to produce a 45-candle incandescent light. In the same proportion, it is estimated that 200,000 eels (which could be placed in a tank measuring not more than 12 feet each way) would produce 400,000 horse-power. This would run the biggest ocean steamer now afloat.

The International Fence Co., Limited, London, has been incorporated to manufacture and deal in iron, wire and steel products, in the Province of Ontario. The company has an authorized stock of $300,000, half of which is preferred, and half common. The provisional directors are F. W. McLaren, C. B. Hillier, Edmund Meredith, Jessie M. Ellis and Rose Riley, all of London.

CONDENSED OR "WANT" ADVERTISEMENTS.

RATES.

Two cents per word first insertion; one cent per word subsequent insertions.

Five cents additional each insertion where box number is desired.

Contractions count as one word, but five figures (as $1,000) are allowed as one word.

Cash remittances to cover cost **must** accompany all advertisements. **In no case** can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

RULES FOR COPY.

In addressing replies care of HARDWARE AND METAL don't fail to give box number.

Replies addressed to HARDWARE AND METAL boxes are re-mailed to advertisers every Monday, Wednesday and Friday.

Requests for classification will be followed where they do not conflict with established classified rules.

Orders should always clearly specify the number of times the advertisement is to run.

All "Want" advertisements are payable in advance.

AGENTS WANTED.

This is the problem of many manufacturers who are anxious to get a foothold in Western Canada. It will be easily solved if HARDWARE AND METAL is given the opportunity to solve it.

AGENT wanted to push an advertised line of Welsh tinplates; write at first to "B.B.," care HARDWARE AND METAL, 88 Fleet St., E.C., London, Eng. [tf]

A SOLINGEN manufacturer of pocket cutlery razors and scissors is open to appoint an agent for the sale of his goods in Canada; his present agent is retiring from business. This is a good opportunity for a young man with a small capital to make money, as the cutlery has a large sale with the best retail trade. It is necessary to carry a stock of about $3,000. Apply to Box A, HARDWARE AND METAL, Montreal.

AGENCY WANTED

WANTED—Sole agency for high class line of hot air furnaces by reliable hardware firm at Calgary, Alta. Address Box 678, HARDWARE AND METAL, Toronto. (tf)

BUSINESSES FOR SALE.

Somewhere in Canada is a man who is looking for just such a proposition as you have to offer. Our "For Sale" department brings together buyer and seller, and enables them to do business although they may be thousands of miles apart.

HARDWARE and Stove Business; stock $1,500, fixtures $200, at 65c. on the dollar; established 1892; must be sold. J. D. Murdoch & Co., Simcoe, Ont. [2]

ESTABLISHED, growing, paying business — furnaces, stoves, kitchen goods, etc.—in live city; good stand; long lease; low rental. A fine opportunity. Owner has other interests. Box 682, HARDWARE AND METAL, Toronto. (3)

FOR SALE — A well-established hardware, tinware and furniture in a good town in Ontario; stock about $6,000; yearly turnover about $16,000; satisfactory reasons for selling. Apply Box 681, HARDWARE AND METAL, Toronto. (1)

ARTICLES WANTED.

If you cannot afford to buy a new counter, show case, screw cabinet, store ladder, or some other fixture which you could use to advantage, try a "Want Ad." under "Articles Wanted," and you may get what you want at a bargain price.

WANTED — Second-hand revolving screw case for retail counter. Kindly write giving description and price to The Hobbs Hardware Co., Ltd., London. (51)

ARTICLES FOR SALE.

Don't keep any fixtures or tools around your store for which you have no further use. They are worth more to-day than they will a year hence. Don't keep money tied up which you could use to secure discounts from your wholesaler.

FOR SALE—Stock of cut nails, sizes 60D to 3D; no 40D or 4D in stock; stock in first class order; price $2 base, F.O.B. Paisley. A. Sinclair Estate, Paisley, Ont. [5]

FOR SALE—Set of tinsmith's tools worth $300 for $150; $90 Taylor safe for $60; 100 gallon Bowser oil tank for $25. All above in A1 condition and must be sold for cash. Apply Iveson L. Cooke, Fenelon Falls. (2)

BUSINESS WANTED

WANTED—Good live hardware business in Ontario, city or town preferred. Box 677, HARDWARE AND METAL, Toronto. (2)

SITUATIONS VACANT.

You can secure a "five-thousand-a-year" manager, or a "five-hundred-a-year" clerk, by stating your wants under "Situations Vacant."

WANTED—Traveling salesman. Apply by letter, stating experience and giving references. The Gurney Foundry Co., Limited, Toronto. (1)

WANTED—Experienced salesman for our specialties to work Montreal and eastward. Canadian that speaks French preferred. Address Wolverine Brass Works, Grand Rapids, Michigan. (1)

TINSMITH for old Ontario, experienced in bench work, cheese factory work, furnace work, sheet metal work and pipe fitting, must be able to do plumbing where iron pipe is used; must be worker and regular in his habits; this is a steady job and $18 per week is paid and overtime may be worked which would bring the wages up to $1,000.00 per year. Applications with references to be sent as soon as possible work can be commenced any time but for a satisfactory man I would wait until Jan. 20th, 1908. Living is as cheap in this town as any town of its size. It has the finest of schools and churches and a beautiful lake. Box 670, HARDWARE AND METAL, Toronto. (52)

DO you want to learn sheet metal pattern drafting? a postal card will bring you full particulars; we also sell patterns for any kind of sheet metal work. The Sheet Metal School, Galt, Ont. (3)

SITUATIONS WANTED.

Travellers, clerks, or tinsmiths, wishing to secure new positions, can engage the attention of the largest number of employers in their respective lines, by giving full particulars as to qualifications, etc., under "Situations Vacant."

WANTED — Position as foreman tinsmith and plumber; would take an interest. Box, 683 HARDWARE AND METAL, Toronto. [4]

Assignee's Notice of Sale

UNDER and by virtue of the powers contained in a certain assignment, which will be produced at the time of sale, there will be offered for sale by tender the $1,600.00 hardware stock of Messrs. Caley Bros., in the Town of Latchford, consisting of miners' and prospectors' supplies, hardware, paints, oils, glass, tools, notions, tinware and general shelf hardware, show cases, furnace, safe, etc., etc.

Tenders will be received by the undersigned up till Saturday the eighteenth day of January, 1908, and will be opened at the office of the undersigned in the Town of Latchford, on Monday, the twentieth day of January, 1908.

TERMS—Each tender must be accompanied by a marked cheque for twenty per cent. of the amount thereof, cheque to be applied on purchase money of tender, if it be accepted, otherwise to be returned to the tenderer, balance of purchase money to be paid in two equal instalments to be secured by paper bearing current rates of interest, acceptable to the Canadian Bank of Commerce, Latchford.

For further particulars and conditions of sale apply to

SCOTT, SCOTT & MacGREGOR,
Latchford, Ontario,
Vendor's Solicitors.

Dated at Latchford this 10th day of December, 1907.

MANITOBA HARDWARE AND METAL MARKETS

Corrected by telegraph up to 12 noon Friday, Jan. 10, Room 511, Union Bank Bldg, Winnipeg, Man.

There is practically no change in the hardware situation in the West this week, and the usual quietness prevails, although all wholesalers are optimistic of the immediate future. Stocktaking is in full swing. There are several changes in market quotations this week, principal of which is with regard to shot, which has made a very material decline. All classes have been reduced from 50 to 90 cents. Rope and wire nails show slight declines, as well as turpentine in barrel lots, which has dropped about 12 per cent. during the past week.

Rope—Sisal, 10½c per pound and pure manila, 14¾c. British manila, 11¾c.

Lanterns—Cold blast,. per dozen, $7; coppered, $9; dash, $9.

Wire—Barbed wire, 100 pounds, $3.25; plain twist, $3.40; staples, $3.40; annealed wire, $2.90 base, oiled, 10c extra; bright iron, $3.10 base; brass spring wire, 32c base; plain galvanized wire, 6, 7 and 8, $3.70; No. 9, $3.25; No. 10, $3.70; No. 11. $3.80; No. 12, $3.45; No. 13, $3.55; No. 14, $4.10.

Poultry Netting—Discounts are 50 and 5 per cent.

Horseshoes—Iron, No. 0 to No. 1, $4.65; No. 2 and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to No. 1, $5; No. 2 and larger, $4.75.

Horsenails—No. 10 and larger, 22c; No. 9, 24c; No. 8, 24c; No. 7, 26c; No. 6, 28c; No. 5, 30c; No. 4, 36c per lb. Discounts: "C" brand, 40, 10, 10 and 7½ p.c.; "M.R.M." cold forged process, 50 and 5 p.c. Add 15c per box. Capewell brand, quotations on application.

Wire Nails—$3.00 f.o.b. Winnipeg and $2.55 fo.b. Fort William.

Cut Nails—Now $3.20 per keg.

Pressed Spikes—¼ x 5 and 6, $4.75; 5-6 x 5, 6 and 7, $4.40; ⅝ x 6, 7 and 8, $4.25; 7-16 x 7 and 9, $4.15; ½ x 8, 9, 10 and 12, $4.05; ⅝ x 10 and 12, $3.90. All other lengths 25c extra, net.

Screws—Flat head, iron, bright, 80, 10, 10 and 10; round head, iron, 80; flat head, brass, 75; round head, brass, 70; coach, 65.

Nuts and Bolts—Bolts, carriage, ⅝ or smaller, 60 and 5 per cent.; bolts, carriage, 7-16 and up, 55; bolts, machine, ⅝ and under, 60 and 5; 7-16 and over, 55; bolt ends, 52½; sleigh shoe bolts, ⅝ and under, 55; 7-16 and over. 45; machine screws, 60; plough bolts, 50; square nuts, cases, 2¾, small lots, 2¼; hexagon nuts, cases, 2¾; small lots, 2¼; stone bolts, 70 and 10 per cent.

Rivets—Iron, 60 and 10 per cent.; copper, No. 7, 36½c; No. 8, 37½c; No. 9. 38c; No. 10, 40c; No. 12, 43c. Assorted, No. 8, 38½c and No. 10. 41½c.

Green Wire Cloth—$1.75 per 100 square feet.

Coil Chain—¼-in., $7.25; 5-16, $5.75; ⅜, $5.25; 7-16, $5; ½, $4.75; 9-16, $4.70; ⅝, $4.65; ¾, $4.65.

Shovels—Discounts are 40 and 5 p.c.

Harvest Tools—50, 10 and 5 p.c.

Axe Handles—Turned, s.g. hickory, $3.15; No. 1, $1.90; No. 2, $1.60; octagon extra, $2.30; No. 1, $1.60.

Axes—Bench axes, 40 and 5; broad axes, 25 per cent. discount off list; Royal Oak, per doz., $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.50; Copper King, $8.25; Columbian, $9.50; handled axes, North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.75; Copper King, $10.50 per dozen.

Churns—45 and 5; list as follows: No. 0, $9; No. 1, $9; No. 2, $10; No. 3, $11; No. 4, $13; No. 5, $16.

Auger Bits—"Irwin" bits, 47½ per cent. and other lines, 70 and 10 per cent.

Blocks—steel blocks, 35; wood, 60.

Fittings—Wrought couplings, 55 per cent.; nipples, 70 per cent.; classified malleable fittings; 25 per cent.; malleable bushings, 50 per cent.; malleable unions, 55 per cent.

Hinges—Light "T" and strap, 65.

Hooks—Brush hooks, heavy, per doz., $8.75; grass hooks, $1.70.

Stove Pipes—6-in., per 100 feet length, $9.25; 7-in., $10.00.

Tinware, Etc.—Pressed, retinned, 70 pressed, plain, 75 and 2½; pieced, 25; japanned ware, 35; enamelled ware, Famous, 50; Imperial, 50 and 10; Imperial, one coat, 60; Premier, 50; Colonial, 50 and 10; Royal, 60; Victoria, 45; White, 70 and 5; Diamond, 50; Granite, 60 per cent.

Galvanized Ware—Pails, 37½ per cent.; other galvanized lines, 33 1-3 per cent.

Solder—Quoted at 27c per pound.

Wringers—Royal Canadian, $36; B.B., $40.75 per dozen.

Files—Arcade, 75; Black Diamond, 60; Nicholson's. 62½ per cent.

Locks—Peterboro and Gurney 40 p.c.

Bluestone—7c lb.

Lath yarn—10¾c.

Building Paper—Anchor, plain, 66c; tarred, 69c; Victoria, plain, 75c; tarred 88c; No. 1 Cyclone, tarred, 84c; No. 1 Cyclone, plain, 66c; No. 2, Joliette, tarred, 69c; No. 2 Joliette, plain, 51c; No. 2 Sunrise, plain, 56c; Jubilee plain, 75c; Jubilee tarred, 88c; Buffalo plain, 66; Buffalo, tarred, 69c; Lion, plain, 55c.

Ammunition, Etc.—Cartridges, rim fire, Canadian, 50 per cent.; American, 33 per cent.; pistol sizes, Canadian, 25 per cent.; American, 5 per cent.; military, Canadian, 20 per cent. off. American 10 per cent. advance. Primers, $1.55. Loaded shells: English and Canadian makes, 12 gauge black soft, $18; 10 gauge, $22.50; 12 gauge smokeless, chilled, English, $24; Canadian, $23; 10 gauge smokeless, chilled, English, $28; Canadian, $27. Shot: Drop, per 100 lbs., $6.75; chilled, $7.15; buck, $7.55; 28 ball, $7.95. Powder: F.F., keg, Hamilton, $4.75; F.F.G., Dupont's, $5.

Iron and Steel—Bar iron basis, $2.70. Swedish iron basis, $4.95; sleigh shoe steel, $2.75; spring steel. $3.25; machinery steel, $3.50; tool steel, Black Diamond, 100 lbs., $9.50; Jessop, $13.

Sheet Zinc—$8.50 for cask lots, and $9 for broken lots.

Corrugated Iron and Roofing, Etc.—Corrugated iron, 28 gauge, painted, $3; galvanized, $4.10; 26 gauge, $3.35 and $4.35. Pressed standing seamed roofing, 28 gauge, $3.45 and $4.45. Crimped roofing, 28 gauge, painted, $3.20; galvanized $4.30; 26 gauge, $3.55 and $4.55.

Pig Lead—Average price is $6.

Copper—Plainished copper, 33½ per pound.; plain, 28½c.

Iron Pipe — Black pipe, ¼-in., $2.70; ⅜, $2.85; ½, $3.75; ¾, $4.75; 1, $6.75; 1¼, $9.25; 1½, $11; 2, $14.80; 2½. $24.60; 3, $32.30; 3½, $40.50; 4, $46; 4½, $54. Galvanized: ¼ in., $3.65; ⅜, $3.80; ½, $4.50; ¾, $5.80; 1 $8.40; 1¼, $11.40; 1½, $13.80; 2, $18.40.

Galvanized Iron — Apollo, 16-gauge, $4.15; 18 and 20, $4.40; 22 and 24, $4.65; 26, $4.65; 28, $4.50; 30-gauge or 10¾-oz., $5.20; Queen's Head, 20, $4.60; 24 and 26, $4.90; 28, $5.15.

Lead Pipe—Quoted at $7.25.

Tin Plates—I.C. charcoal, 20x28, box, $10; IX charcoal, 20x28, $12; XXI charcoal, 20x28, 14.

Terne Plates—Quoted at $9.50.

Canada Plates—18x21, 18x24, $3.50; 20x28, $3.80; full polished, $4.30.

Lubricating Oils—600W, cylinders, 80c; capital cylinders, 55c and 50c, solar red engine, 30c; Atlantic red engine, 29c; heavy castor, 28c; medium castor, 27c.; ready harvester, 28c; standard hand separator oil, 35c; standard gas engine oil, 35c per gallon.

Petroleum and Gasolene—Silver Star, in bbls., per gal., 20c; Sunlight, in bbls., per gal., 22c; per case, $2.45; Eocene, in bbls., per gal., 24c; per case, $2.60; Pennoline, in bbls., per gal., 24c; Crystal Spray, 23c; Silver Light, 21c. Engine gasolene, in barrels, gal., 25½c, f.o.b. Winnipeg, in cases, $2.60.

Paints and Oils—White lead, pure, $6.50 to $7.50, according to brand; bladder putty, in bbls., 2½c; in kegs, 2¾c; turpentine, barrel lots, Winnipeg, 70c; Calgary, 97c; Lethbridge, 97c; Edmonton, 98c. Less than barrel lots, 5c per gallon advance. Linseed oil, raw, Winnipeg, 65c; Calgary, 77c; Lethbridge, 77c; Edmonton, 78c; boiled oil, 3c per gallon advance on these prices.

DISCOVERY OF NICKEL.

The mineral resources of New South Wales have recently been further proved by an important discovery of nickel. From time to time traces of nickel have been detected in certain manganese and other ores, and lately, together with platinum and palladium, in a remarkable copper ore near Broken Hill. The carbonate of nickel has now been found near Bingara, and specimens which have been forwarded to the Mines Department consist of serpentine traversed by veins of nickel. Odd pieces, not specially picked, assayed about 13 per cent. of metallic nickel and 1 per cent. of metallic cobalt.

The Bakeries Company, Limited, Victoria, B.C., have taken out a permit for a $9.300 building.

LETTER BOX.

Correspondence on matters of interest to the hardware trade is solicited. Manufacturers, jobbers, retailers and clerks are urged to express their opinions on matters under discussion.

Any questions asked will be promptly answered. Do you want to buy anything, want some shelving, a silent salesman, any special line of goods, anything in connection with the hardware trade? Ask us. We'll supply the necessary information.

Curling Stones.

A. S. Smith, Moosomin, Sask., writes: "We would like to know if you can put us in touch with some one in Winnipeg or Toronto who can supply us with curling stones at once."

Two Toronto firms handling curling stones are Keith & Fitzsimmons, and Rice Lewis & Son.—Editor.

The Supply Cornered.

The Northern Engineering & Supply Co., Fort William, writes: "We would be pleased to have you send us the names of some of the firms of your city and Montreal who handle roofing slate."

The Roofers Supply Co., Toronto, is the only firm who import this slate, to our knowledge. The Canadian supply is limited and is all handled by the Roofers Supply Co. This company also import large quantities of the slate from the Pennsylvania quarries.—Editor.

Tortoise Stoves.

W. P. Millar, Calgary, Alta., recently of Brockville, writes: "Re Tortoise stoves, note the inquiry of your Kingston subscriber and beg to advise that the No. 5 is the largest size at present being manufactured in this country, but larger sizes are made in England, where this line originated."—Editor.

An American Address.

Brantford "Subscriber" writes: "Kindly let us know through your letter box the American address of the Welsbach Co., manufacturers of gas burners, mantles, etc."

The address of the Welsbach Co. is 68-70 Wabash avenue, Chicago.—Editor.

Snow Plows.

In a recent issue two subscribers inquired the address of a firm manufacturing snow plows. Since then we have received the name of H. Seurey, Barrie, who, we are informed, manufactures a high-class plow.—Editor.

In all probability a railway freight bureau will shortly be added to the departments of the Montreal Board of Trade to handle matters connected with the shipping interests of the members. Various subsidiary organizations have all approved of the idea, but further action has been deferred until the presidents of the branch associations have had time to confer with their members.

The Grand Trunk Pacific will purchase 600,000 railroad ties during the winter. The ties will be gathered at Edmonton, The first shipment, consisting of 100,000, left British Columbia on December 1st.

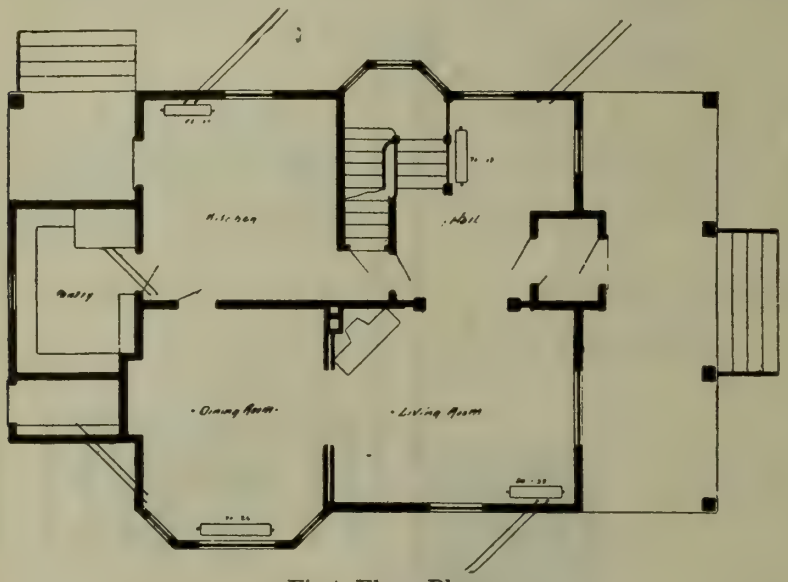
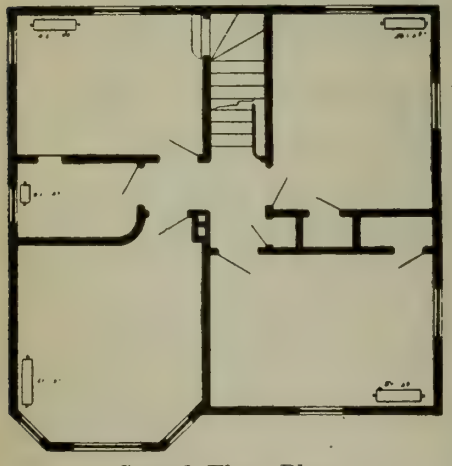
Practical Talks on Warm Air Heating



The Eleventh of a Series of Articles by E. H. Roberts.

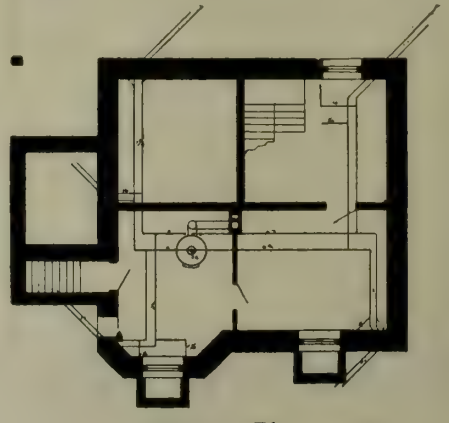
Open Tank Hot Water Plant.



It is not at all a difficult matter to install a hot water plant, and in the opinion of the writer there is no good reason why hardware dealers generally should not make hot water heating just as much a part of their business as stoves or furnaces.

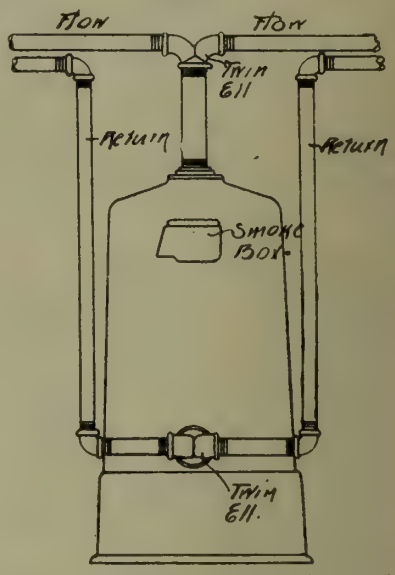
The circulation of the water in any hot water system depends entirely upon gravity—the warm water rising while the cooler water seeks a lower level; therefore, it is absolutely essential that both the flow and return pipes should have a continual rise from the boiler to the radiators. Ordinarily an elevation of one inch to every ten feet is considered sufficient, but the greater the elevation of the pipes the more rapid will be the circulation of the water and the more satisfactory the operation of the plant.

Sometimes it is rather difficult to maintain the grade of piping while working around timbers or over foundation walls, and not infrequently a pipe will be unintentionally trapped—that is, the natural grade will be reversed for a short distance—and, as a consequence, the circulation of the water through that pipe will be impeded. The only way to guard against mistakes of this kind is to use a level and to take a great deal of pains in making the short connections. Not only is it necessary to have the pipes properly graded, but the arrangement of the mains and the method of connecting the branches with the mains is almost equally important.



First Floor Plan.

Second Floor Plan.



If you will refer to the basement plan shown here you will notice that there is one flow main to feed the radiators on one side of the building and another for the radiators on the opposite side. This arrangement equalizes the water travel to some extent and ensures a comparatively even temperature of the water in all the radiators.

Basement Plan.

Where Branches Are Taken Off Mains.

Where the branches are taken off the mains, it is advisable to elevate the branch a little above the level of the main so as to induce a stronger circulation than could be secured were the tee so placed that the branch was taken straight out of the side and the fittings necessary to make a proper connection between the main and the branch are shown on accompanying detail.

Detail Showing Method of Connecting Up Boiler With Two Sets of Mains, Using twin elbows.

Branching-off Main.

The return pipes are usually run parallel with the flow pipes and should have exactly the same grade. The method of connecting the return branches with the return mains is also the same as with the flow pipes, so the fittings and pipe required for a hot water plant can be roughly estimated at just double that necessary for the flow pipes alone.

In order to determine the sizes of pipes required, first find out the proper size for the farthest radiator and constantly increasing the size of pipes as more radiators are added: for example, to feed two 1 inch pipes will require one 1¼ inch pipe; to feed one

1¼ inch and one 1 inch will require one 1½ inch pipe.

Where the boiler is provided with only single tappings for flow and return connections and it is desirable to divide the water, substantially as shown on basement plan, it is, of course, necessary to provide fittings that will allow the water to circulate in opposite directions. A bull-headed tee will divide the water, but this can be accomplished much better and with less friction by using a twin elbow, as shown on boiler detail. The reason for dividing the return mains at base of boiler, as shown on detail, is to avoid the smoke pipe, which is usually at the back.

An expansion tank of some kind is necessary unless other provision is made for the expansion of the water in the system. Sometimes a hot water plant is run under city pressure or has an open connection with a supply tank in attic, but in such cases there is always the possibility of flooding the house should a fitting split or a leak develop in some upstairs pipe. The expansion tank should be located above the highest radiator and connected with some return pipe at any convenient point.

To fill the system the water can be introduced into the expansion tank, but if there is city water or a supply tank in the building, connection can be made with the system and a shut-off or gate valve provided to close off the supply as soon as there is sufficient water in the system.

METHODS OF SELLING STOVES.

"When a woman comes in to buy a stove she does not have much idea what she is after," says a hardware dealer in a Western exchange. "She wants a stove that will bake well, burns the least possible fuel, looks well and costs as little as possible. That's all she knows about it.

"There is no use asking her what size she wants—or anything nearer than to find out if she wants a large, medium or small range. For myself, I generally size the customer up and show her what I think will answer the purpose. If she looks like a boardinghouse keeper, for instance, or appears to be quite wealthy, I show her one of the six nine-inch cover ranges with all appliances. If I have made a mistake she soon lets me know and no harm is done. If I see that she is more likely to want a $15 or $20 cook I show her one of these.

Doesn't Mention Price.

"I do not say anything about price at first, unless she asks me. I take her over the display floor and pull a range out from among the others, so that she can see it all around. Then I point out its good features—the size of the oven (which is very important), explain why it is a good baker, how the firebox is constructed so as to economize fuel, how the damper and the different drafts work, the way the oven door swings, how easily the stove is cleaned out, the size of the reservoir, or the waterfront, how the firebox is arranged so as to burn either coal or wood, etc. In other words, I show all the good points of the stove.

Gives Customer Time.

"But this should not be done all in one breath, like a book agent talks to keep you from saying 'No.' I always give the customer time to ask any questions and answer them fully. Very often she will have some particular point in mind, as to how the stove will burn a certain kind of fuel, or how the oven will bake on the bottom, or some other point on which her old stove has given trouble. She wants to avoid this in buying again.

The Baking Qualities.

"But the baking qualities of the stove are the ones that appeal to women in almost every case, so it is well to have them at the tongue's end. With a man, now, I emphasize the wearing qualities of the stove. When a woman brings her husband in to see the stove before making her final decision I point out to him the material from which the stove is constructed and call attention to its lasting qualities. These appeal more generally to the man who foots the bill.

"Sometimes while the stove is being examined the customer asks the price. If she intimates that it is too high or shows that she thinks so, I call her attention to another stove not so high priced. I do not say, 'Here is a cheaper one,' of course, but I show off the good points of the other stove and when she asks tell the price."

SELLING A RANGE.

"How do I sell a range?" repeated one of the best salesmen in a well known hardware store. "Well, I hardly know how I do it. I might say that I find out what the customer wants and then give it to him—or it is generally 'her.' That's about all I know about it.

"Selling a stove is no harder than selling anything else, but it is more important than selling some small object on which the profit may be but a few cents. It therefore pays to take pains with each customer. If I do not have what she wants on the floor, I go

and get a catalogue that shows what she is after, or as near it as possible. Frequently I make sales this way. Here is where it is necessary to study the catalogues and know where each kind of stove is to be found.

Some Peculiar Questions.

"I find that there are some peculiar questions fired at me. For instance, the other day a woman wanted to know if the range I was showing her would bake custard pie. She said that her old stove never would bake it, although it did very well for anything else. I assured her that the stove would bake anything that any stove would, although I had never seen it bake just that variety of pie. I had a suspicion that something else than the stove was the matter with the custard pie, but of course I did not say so.

"And speaking of baking, I have found it very convenient to know exactly how long it will take each stove to bake certain things. Biscuits seem to be the standard among the cooks, so I know either from demonstrations or from the literature of the manufacturer just how long it takes for the range to bake a batch of biscuits. They run all the way from three minutes to fifteen, but I hardly ever emphasize the three minuted record as that time is made only under the best possible conditions, with everything perfect. The quick baking stove is not always capable of doing that when attached to the ordinary chimney and burning miscellaneous fuel."—The Hardware Trade.

STOVE INDUSTRY IN CHINA.

During the year 1906 stoves and grates were imported into China to the value of 178,402 taels (1 tael equals 83 cents), the largest portion of which, a value of 131,887 taels, coming from Germany. These stoves are used almost entirely by the European and other foreign residents of China, and only to a small extent by the Chinese natives. Small heating stoves are, however, gradually coming into use among the Chinese, and as coal becomes more plentiful throughout China there is every possibility that there will be a greatly increased call for these goods. The class of heating stoves used by the natives themselves are locally produced brick structures built in the shape of a bed and known as a "kang." A fire is built under this and serves to keep the family partially warm when they sit or recline upon it. Charcoal braziers are also used in the better class houses and a small charcoal brazier enclosed in a basket, is worn under the clothing by the natives, suspended from the waist, and carried around with them wherever they may go. The better class of Chinese are now taking to the use of foreign stoves, generally of the type known as direct draft surface burners, which sell at retail on the Shanghai market at about $7.50 United States currency, each. Cheaper imitations can be obtained for about $3 or $4. The larger stoves sell at higher prices and are finding a sale among the Chinese wishing to secure a better class of article. The German stoves sell on the Tsingtau market at the following prices': Basket shaped, first quality, from $2.25 to $4 each; second quality, from $1.70 to $3 each; upright shaped, first quality, from $6 to $15 each; second quality, from $5 to $10 each; third quality, from $4 to $7.50 each; fourth quality, from $2.50 to $4.50 each. The demand is for cheap stoves, and the German makes appear to have preference over those of American manufacture from the fact that they use a smaller quantity of fuel. Fancy stoves would naturally command a better sale, but they are too expensive for the Chinese people.

Coal is the fuel usually used in stoves in China. It is mined in the Shantung province and sells at retail in Tsingtau at $4.25 United States currency a ton, delivered at the house. It is somewhat more expensive in Shanghai and other Chinese ports and varies in price from $13 to $20 Mexican, approximately $6.50 to $10 United States currency. Cooking stoves for use by Europeans in China sell at Shanghai from $10 up, when of American manufacture.

DANGER FROM STOVE PIPES.

Jarring the soot out of a stove pipe is not enough, says a writer in the Metal Worker, as a scraper should be used inside it to remove scales. Then it should be inspected, section by section, for rust holes, which might permit sparks to fly outward instead of upward. See that the pipe when up is spark tight throughout and is not pushed into the flue so as to choke it. An elbow in a stove pipe lessens the liability of particles, kindling or fuel being drawn from the chimney top and alighting still red hot on the shingles. If such sparks are given elbow room they are likely to bump in making the turn and fall back harmless. While a fire is burning the air in a chimney travels up at the rate of 3 to 6 feet a second. Unplugged and rag filled stove pipe holes cause some fires.

A stove pipe should not pass where it cannot be seen, as through a lath and plaster partition, or through an attic or unused room, because openings in it may occur from rust or the parting of a seam or joint. And, too, in such situation the pipe becomes covered with fluff or lint, which is liable to ignite; neither should a pipe pass through roof, window or siding, even if a summer kitchen, for it is liable to become red hot. No flues should be smaller than 8x8 in., which is the length of a brick. If any green wood is used it should be 8x12 in. A fire place chimney must have at least one-tenth the area of the fire place it serves. The effective way to deal with this enormous loss from defective flues is through a building law which controls the building of chimneys.

CARELESS HANDLING OF GASOLENE.

From 450 to 500 mothers and children are burned to death and three times that number seriously burned and disfigured in the United States each year by gasolene stove accidents. Last week a mother essayed with one arm to fill the tank of a lighted stove while holding her baby with the other. Both have died from burns, and another little one playing near will be disfigured for life. Stove accidents usually result from filling the tank without turning off the blaze or from spilling gasolene and then igniting the vapor of it by striking a match to light the stove. The gasolene can should be well corked.

A gasolene stove should be fixed to a permanent foundation so that it cannot be placed against wood or other inflammable material. It should have bottom and three sides closed to prevent combustible material from reaching the flame, and the main burner grates should be two feet from the floor.

Don't fail to have burners closed before filling the reservoir, for fluid leaking through them will make an explosive vapor.

A HEATING CONCLUSION.

"Heating by direct radiation is condemned by every practical and scientific test as being unsanitary and unhealthful," says the Hardware Trade. "Every authority on ventilation, every competent heating engineer, every physician who has given the question the slightest study, condemns direct steam or water heating as being in violation to nature's laws. There is no division of opinion among those who speak with authority on this subject; they agree without a dissenting voice that the only proper way to heat an apartment is by pouring pure warm air into it.

"There are two methods of indirect heating available in actual practice. One method is by an indirect steam or water system and the other is by warm air furnace heating. With a tight, durable, properly constructed warm air furnace of adequate capacity for the required work, with the piping properly proportioned and with correct installation, we claim that there is no other healthful method of residence heating which is so successful, so practical and so economical as warm air furnace heating."

SPECIAL DEVICES IN HARDWARE.

The mammoth steamer of the Cunard line, the Mauretania, has been fitted with a number of special features in hardware, especially designed for the use to which they are to be put. One of these is a lift-out butt, devised to meet the need for a hinge to carry the wash-basin flap and an additional flap in front of the ordinary fold-up type of cabin lavatory; about 1,000 of these fittings are fixed on the ship.

Improved hinges have been devised for fold-up berths so as to allow the bed with the full complement of blankets and linen to be folded up against the bulkhead when not required. Among the cabinet brass foundry mention may be made of drawer-handles for the dressing chests; improved flush pulls for use in confined positions, fittings for the life-belt racks which will enable a passenger to let fall his allotted belt instantly in case of need. About 500 swinging mirrors have been used, all hung on patented movements which hold the glass rigid at any angle, while an improved stay keeps the mirrored door of the wardrobe in any desired position and makes it possible for a passenger to have the benefit of the reflection of two mirrors.

BUILDING AND INDUSTRIAL NEWS

For additional items see the correspondence pages. The Editor solicits information from any authoritative source regarding building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories or foundries, railway or mining news.

Industrial.

Humboldt, Sask., will spend $10,000 for a proper system of fire protection.

The Cape Breton Prospecting Co., Sydney, N.S., will install a new steam plant.

The Dominion Wrought Iron Wheel Works, Orillia, are increasing the capacity of their plant.

The Malleable Iron Works, Brantford, closed down on Christmas Eve and will commence operations again next week.

The Central Heat, Light & Power Co., Montreal, are installing an extra 400 horse power boiler, with a view of extending their steam and hot water system of heating stores and buildings.

The Rathbun Company's sash and door factory at Deseronto, which has been closed down for repairs since December 23rd, started to-day, which means a great deal for the working people of Deseronto.

William Scott, of the Pigeon River Lumber Company, Port Arthur, has applied to the city for fifty thousand horse power of electrical energy, to use in the operation of large pulp mills, which it is the intention of erecting there in the near future.

L'Ecole Polytechnique, in connection with Laval University, Montreal, has recently placed an order with the Canadian Fairbanks Co. for a six h.p. special electric gas engine and 3½ k.w. direct current dynamo for experimental and demonstrating purposes. These should be a valuable addition to their engineering laboratory equipment.

W. W. Near, president of the Page-Hearsey Iron Tube & Lead Company, Toronto, states that no additions will be made by his company to the plants at Guelph and Welland at the present time. The company may issue new stock to the amount of $1,500,000 some time during the year, making a total of $3,500,000, but at the present time the increased capitalization authorized is not to be used.

Votes on By-laws.

Alvinston—The manual training by-law was defeated by 31.

Barrie—A by-law to give a loan of $20,000 to the Fleming Aerial Ladder & Motor Vehicle Co. was carried by a majority of 760. Another by-law providing for the expenditure of $10,000 on cement sidewalks was defeated by 67.

Berlin—A debenture by-law raising $30,000 was carried by 67 majority.

Berlin—The street railway by-law was carried by a vote of 154 to 81.

Exeter—The evaporator by-law was defeated.

Dundas—The by-law to build a new High School, costing $25,000, was defeated by a majority of 187.

Durham—The bridge by-law was carried by 178 majority.

Gananoque—A by-law authorizing the town to issue $10,000 of debentures to complete and pay for debts contracted for electric light works carried.

Goderich—The by-law to loan the Doty Engine Works Co. $30,000 for the building of a boiler factory carried by a substantial majority, while two by-laws to authorize the Town Council to expend $18,000 in the improvements of the town water supply and sewer extensions were defeated.

Hespeler—Hespeler ratepayers passed a by-law to raise $12,000 for the extension of a pipe line for fire protection.

Kingston—Two by-laws were carried, one granting $12,000 for road improvement and one for $3,800 for building the Queen street sewer.

Kincardine—The by-law to grant $8,500 for improvement to the Central School was carried.

Listowel—A by-law to exempt the local foundry was carried.

Meaford—The by-law to build a town hall to cost $15,000 was carried by 295 to 143, and that to grant Seaman, Kent Co. a $10,000 bonus by 362 to 97.

Niagara Falls—By-laws to spend $15,-800 on waterworks improvements and $5,800 on garbage disposal, and $23,000 in additional schools, were carried by large majorities.

Peterboro'—Two by-laws were voted upon, one to assess water rates against all vacant property passed by water mains, whether owners are consumers or not, was carried by a large majority. A by-law in regard to a garbage system for the city was defeated by a large majority.

St. Thomas—A by-law to spend $18,-000 on a subway under theM.C.R. tracks at Ross street, carried by 814 to 647.

Smith's Falls—A by-law to raise $6,500 was carried.

Sarnia—A by-law to raise $6,000 for the extension of the waterworks was carried.

Teeswater—The Carnegie Library by-law was defeated by 96 votes.

Tillsonburg—The by-laws regarding Borden's Condensed Milk factory had 406 votes, against 43; Pork Packing Co. by-law, for 405, against 47.

Waterloo—The by-laws to extend the sewer farm, to install a sanitary system in the schools, and to enlarge the gas plant, were carried.

Welland—The following by-laws were carried: Good roads, Waterworks Commission, sidewalks, frontage, Bemis Bag Co., sewer.

Electric Power By-laws.

Thirteen municipalities in Ontario on January 6 voted on power by-laws in connection with the Beck scheme. Ingersoll was the only place to reject the by-law. The proposition there was to vote $50,000 to purchase the existing plant of the Ingersoll Light Company, and this was defeated by 436 to 200. In St. Thomas and Guelph the majorities in favor of the by-laws were overwhelming. This is how the vote resulted:

	For	Agst.
Hamilton	3,038	1,673
London	2,809	941
St. Thomas	1,295	191
Brantford	1,131	734
Stratford	1,053	372
Guelph	968	98
Galt	756	510
Woodstock	865	154
Ingersoll	200	436
Waterloo	437	115
St. Mary's	*292	...
Hespeler	*82	...
New Hamburg	152	31

*Majority.

Building Notes.

A. Grossman, Vancouver, will build an office building to cost $75,000.

The Simeon Jones Co., St. John, N.B., will build an extension to their brewery.

A new factory will be erected at Calgary, Alta., next season, by the Dominion Match Company.

The Imperial Oil Company, Winnipeg, are seeking a site for a warehouse at Saskatoon, Sask.

During 1907, buildings, public and private, were erected in Calgary to the value of $2,000,000.

A permit for a packing house, to cost in the vicinity of $100,000, has been issued in Edmonton.

A fertilizer plant will be erected at Vancouver, B.C., by the Pigeon Fertilizer Co., of Nova Scotia.

The addition to the B. C. Packers' plant, New Westminster, B.C., has been let to Contractor Cassady at $40,000.

St. Helen's Church (Roman Catholic), Toronto, has taken out a permit for a brick and stone church to cost $50,000.

The Catholic Church at Lachine will be re-built and enlarged to seat 4,000 people. The cost of the alterations will be $80,000.

William Nicholson, Wingham, has secured the contract for the new post office at Kincardine, the price contracted for being $18,000.

George Henry, Toronto, has contracted to have the addition to the Toronto post office completed by October. The cost will be in the vicinity of $20,000.

Companies Incorporated.

The Berlin Steel Go-Cart Company, Limited, has been incorporated with headquarters at Berlin, to manufacture carriages, go-carts, sleighs and wheel specialties. The provisional directors named are F. M. Hoffman, South Bend, Ind.; H. S. La Grange and Norman Roos, Berlin.

The B. Greening Wire Co., Limited, Hamilton, has been incorporated to take over the business of the B. Greening Wire Co., for the manufacture of iron and steel products. The company's head office will be in Hamilton, and the capital stock will be $750,000. The provisional directors of the company are S. O. Greening, R. H. Merriman, John Maw, H. B. Greening, all of Hamilton.

IVER JOHNSON
SAFETY AUTOMATIC REVOLVER

A revolver that can be discharged in any other way than by pulling the trigger is a mechanical absurdity as well as a constant danger.

The things you can do to an Iver Johnson Safety Automatic Revolver without discharging it would keep you busy all day. The one thing you can't do to it is—fire it in any other way whatever than by pulling the trigger.

Handsome in appearance, made in many styles—like a rifle for accuracy—hard-hitting and speedy—but always safe to handle.

We advertise our revolver on a national scale. It is never sold by mail where a dealer will handle it. And we guarantee the goods. Be sure of the owl on the grip and our name on the barrel.

Send for Dealer's Catalogue or order from your jobber.

Tiger  Brand

White Lead

Pure White Lead is best for either white or colored paint, as by adding the proper quantity of pure painter's colors, any color can be obtained. To get the best results, however, White Lead must be absolutely pure.

"TIGER" White Lead is made from the best pure White Lead and pure Linseed Oil, containing no adulteration whatever.

Every package bears the yellow label of the White Lead Association of Canada, guaranteeing its purity.

Specify "TIGER" brand. None better made.

The Montreal Rolling Mills Co.

Some Bookkeeping Pointers

Learn the principles that govern correct systems—Who should pay exchange?—The draft system and its advantages—Very useful information compiled by Howard R. Wellington.

It is much more important to learn the principles that govern correct systems of bookkeeping, than it is to learn any particular form according to which books should be laid out. Any intelligent man may learn bookkeeping by acquiring the fundamental principles of scientific accounting, and draw up his own forms according to those principles, the idea being that no one set of books and forms is applicable to every business. For this reason a knowledge of the principles and methods that are used by the best bookkeepers in any business will enable anyone to vary the forms so as to apply them to any other business.

In a general way, those forms are best which require the least copying, the fewest entries, the least ruling; which require the books of original entry to be posted direct to the ledger, and in which the journalizing is done by means of ruled columns. The best forms should also facilitate, so far as possible taking balances and ascertaining losses and gains. If the bookkeeper criticizes his forms on these six lines and finds them satisfactory, while they show all the results that the proprietors wish to ascertain, he may be satisfied with his work. Although the merchants accounts are his private records, they also partake of the nature of a trust, and should bear evidence of being kept honestly and in good faith.

If errors are made, they should be so corrected as to show the original error and the reason for its correction. Account books should be so plain and clear as to be understood at once by a stranger who sees them for the first time, and explicit and ample enough for the guidance of an outside party who comes in to take off a statement.

When an error is made in posting, above all things never erase the original amount entirely. Some bookkeepers do this, but it should be avoided, for the reason that if someone is called in to audit the books, no trace of the amount is found, although it can readily be seen that an erasure has taken place, the impression being left that something is wrong. Then again the same bookkeeper who makes the erasure, although familiar with it for a short time, will likely lose track of the instance in time, and become confused as to the cause.

The object of bookkeeping in any establishment is primarily to know the proprietor's financial condition—what he owes, what he owns, and what is due him. If goods are sold, the record should show: (1) That the goods are actually delivered; (2) That the correct charge is made against the buyer; (3) That he receives proper credit when the account is paid. Modern bookkeeping is trying to reach these ends in the shortest possible way, and with the least expenditure of time and labor.

Exchange—Who Should Pay It?

You may say that exchange on drafts and cheques is a small matter anyway, and it really is immaterial who pays it. As a matter of fact, the exchange item in a large house collecting the bulk of its accounts by drafts runs up into the hundreds of thousands. The question is, who should pay the item—the buyer or seller?

The practice, largely in the United States, on drafts to Canada and also to some points across the line, is to add exchange charges to the draft in payment of an account, thus making the receiver or purchaser stand this expense. This seems a reasonable custom, as goods are purchased in a certain city and should be paid for in the funds of the same place. The reason why this plan is not general in our own country is probably on account of the fact that wholesalers find it necessary to adopt some systematic method of collecting accounts, and as the draft system supplies this need, rather than leave accounts outstanding indefinitely, a wholesaler would prefer to stand the exchange on each draft sent out to a customer and have accounts collected when due.

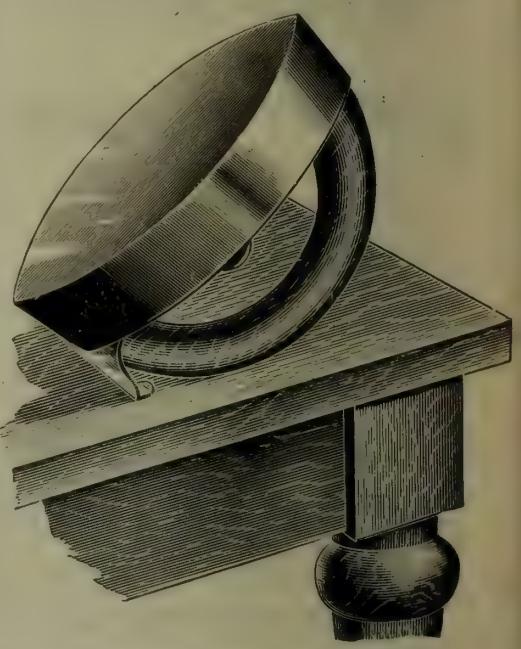
Of course on a small account, where the goods are sold on a close margin, sometimes there is actually a loss involved, when it is necessary to make a draft for from $8 to $10 and pay exchange. Suppose an article costs $6 and is sold for $7.50, leaving a gross profit of $1.50. The cost of selling would be about 10 per cent., or 75 cents; the inside expense, including stationery, postage and cash discount, on an average about 8 per cent., or 60 cents, and the exchange on draft or cheque in payment of the account to 25 cents, or a net cost of $1.60, with an actual loss on the transaction.

It is hardly fair for a merchant to remit by cheque on his local bank, when the account is a small one, nor is it right that the seller should be obliged to pay exchange on a draft. Of course in a large amount there is a difference for the reason that a large account can be put through at practically the same expense.

The Draft System.

Most merchants to-day prefer to settle accounts by draft rather than by cheque or money order remittance. There are a number of reasons why the draft system has become so popular:

First: Because the buyer has no difficulty in looking after his cash discounts, as the seller makes the draft (unless otherwise advised) so as to enable the merchant to take advantage of his cash discounts every time.



Second: Because it saves a great deal of labor in making up remittances of cheques or money orders and mailing the same so as to reach the seller before the cash discount period has expired, for all that is necessary is to sign the draft and keep a record of the amount and due date.

Third: Drafts accepted, and honored at maturity, are a good advertisement for a merchant's credit. Of course we expect some dealers to take exception to this method of settling accounts, but these cases are very rare to-day, and only occur when a merchant is not convenient to a bank, or, in the case of larger houses, a certain day or days are set apart each month as "payment days," when all "passed" accounts are paid by cheque.

A very good plan for keeping a record of all acceptances or notes payable is by the use of a small diary, entering on the due date of each acceptance the amount due and the names of the parties making the draft. The bill must of course be recorded in the bill book for posting in the ledger, but the diary will keep the merchant informed from day to day of certain accounts payable becoming due, and preparation can be made several days ahead of time to take care of the paper, rather than have it returned. This small diary may be bought at a very low price and may be used for innumerable purposes as well.

NEW SAD IRON HANDLE.

We illustrate herewith an improved sad iron handle which Taylor-Forbes company of Guelph are now offering to the trade. It is so simple that a great many people wonder why it was not thought of long before. As the illustration shows, the iron can be put down

Improved Sad Iron Handle.

anywhere by the user without fear of burning the article being ironed, and it is also far less liable to slip off the table than if a stand were used. It is an invention of their hardware sales manager, Harry F. Moulden, and is being patented both in Canada and the United States.

Paint and Oil Markets

MONTREAL.

Montreal, Jan. 10.—What with holiday and sundry conventions among the jobbers there has not been much activity in the paint and varnish department of the hardware trade for some little time. However, the salesmen are now getting on the road, and it is expected that the volume of business will trend upwards.

Linseed Oil—Owing to the absence of heavy calls, no change is noted in the linseed oil market, and we continue to quote: Raw, 1 to 4 barrels, 59c; 5 to 9 barrels, 58c; boiled, 1 to 4 barrels, 62c; 5 to 9, 61c.

Turpentine—Considering the time of the year this article is exceedingly quiet. Only a light inquiry exists, and local stocks seem ample. No change is noted in the quotations, which are as follows: Single barrels, 70c; wood distilled turpentine, pure, 64c.

Ground White Lead—The falling tendency in price seems to be checked, and some large purchases will be made about this time, especially as the coming month of February is generally considered a good white lead month. We quote: Government standard, $6.75; No. 1, $6.50.

Red Lead—No heavy shipment seems to have been made since the closing of navigation, and small purchases are the order of the day. We quote as follows: Genuine red lead, in casks, $6; in 100-lb. kegs, $6.25; in less quantities at $7 per 100 pounds. No. 1 red lead, casks, $5.75; kegs, $6, and smaller quantities, $6.75.

Dry White Zinc—This article is unchanged, with a fair inquiry from several of the grinders. V.M. Red Seal, 7½c; Red Seal, 7c; French V.M., 6c; Lehigh, 5c.

White Zinc Ground in Oil—A limited business is doing in this article, and there is no change to note. Pure, 8½c; No. 1, 7c; No. 2, 5⅝c.

Varnishes—For interior varnishes fair orders have been received, and a good healthy trade, considering the season, is now being done.

Putty—Putty in bladders and in tins seems to be shipping very freely. There is not much inquiry for putty in bulk casks, showing that there is a tendency to limit the call for putty for structural work. Quotations are as follows: Pure linseed oil putty, bulk, in 800-lb. casks, $1.75; in 25-lb. iron drums, $2.05; in 25-lb. tins (3 in a case), $2.15; bladder putty in barrels, $1.95.

TORONTO.

Toronto, Jan. 10.—This has been a busy week among the local paint jobbers. The travelers have returned to the road and the uncertainty of the turpentine market has added vigor to this week's trade which has been absent for some time. During the week the price of turpentine has advanced 10 cents at Savannah, but the price has not been raised correspondingly in Toronto as yet. The cause of the fluctuations in this commodity is rather uncertain, but is likely being caused by manipulation of the markets in the southern states.

Stock taking among the jobbers is about completed for the year and small orders are coming in freely during the past week, but to date the new year does not compare very favorably with 1907, though January is usually a dull month with the trade. The several changes which are chronicled below should liven up business to a great extent.

Linseed Oil—The market continues firm, but the demand is unusually slow only single barrel lots and small quantities having been called for during the past week. Quotations are: Raw, 1 to 3 bbls., 60c; 4 bbls. and up, 59c. Add 3c to this price for boiled oil, f.o.b. Toronto, Hamilton, London, Guelph and Montreal, net 30 days.

Red Lead.—In sympathy with the metal base red lead has declined sharply during the past week. The demand has been slack for some time but dealers will probably take advantage of this week's quotations and buy for future delivery. The decline in the price of red lead is from 40 to 50c. We now quote: Genuine, in 500 lb. casks, at $5.60; genuine, in 100 lb. kegs, at $6.

White Lead—To date white lead has not changed in price, though owing to the decrease in lead a lower quotation will likely be offered the trade in a few days. Some small orders are being booked for immediate delivery. Prices are as follows: Genuine white lead, $6.75 to $6.90; No. 1, $6.50 to $6.75.

Turpentine—The turpentine market has been very interesting during the past few days, for some cause the price has been tampered with in the States, with the result that the price at Savannah has increased several cents. A year ago the same thing happened on this market and Toronto prices soared to 99c a gallon. The price at present has not been advanced in Toronto in the same degree as in the south, although a local importer thinks the price will still go higher. Quotations this week are uncertain and range in value from 70 to 73c for single barrels; 2 to 4 barrels, 72c. Less than barrels, 5c advance.

Petroleum—The demand for coal oil is fairly strong at present and a slight advance has taken place in price. Quotations for the week are: Prime white 13½c, water white 15c, Pratt's astral 17½c.

Glass and Putty—Glass is moving actively with a fair January demand for putty. We now quote: Barrels of bladders at $1.95 per 100 lbs., and less than barrels at the rate of $2.10 per 100 lbs.

Shellac—Shellac is also uncertain at present, the new price lists varying to a considerable extent. The demand is fairly good for this month. The following are the prices: Pure white, in barrels, $2.25 to $2.50; pure orange, $2, and No. 1 orange, $1.90.

Varnish—The demand for varnish is fairly good at present, though orders being received are for small quantities only. Quotations are as follows: No. 1 furniture, in barrels, 65c; elastic oak, in barrels, $1.25; light hard oil in barrels, $1.05.

3/4

THREE-QUARTERS OF OUR OUTPUT IN PARIS GREEN HAS ALREADY BEEN SOLD IN QUICKER TIME THAN EVER BEFORE.

REASONS: THE STANDARD FOR EXCELLENCE IN DEATH-DEALING QUALITIES, AND, CONSEQUENTLY, ITS GROWING POPULARITY.

"FAMILIAR," TO EVERY ONE, AS "HOUSEHOLD WORDS,"

THE CANADA PAINT COMPANY, LIMITED

A Paint Catechism

By G. B. Heckel.

47. Why are drying oils used in paint manufacture? First, to give to the paint the necessary fluidity; secondly, to insure the uniform distribution of pigment on the surface; thirdly, to form a firmly adherent and coherent film of the proper character; and lastly, to produce in the paint the desired lustre.

48. Why is linseed oil usually preferred for this use? First, because it is the most abundantly obtainable of all the drying oils, and on this account its use is very generally understood; secondly, because its cost is generally moderate in comparison with other drying oils; and thirdly, because in our present state of knowledge the results obtained with it are more uniform than with other oils, whether used by the expert paint or varnish maker, the painter or the unskilled novice.

49. Are the same proportions of "driers" used in all paints? No. Some pigments themselves act as "driers"—such in order of drying "strength" are red lead and the other lead oxides, lead carbonate, the iron oxide paints, of which the umbers are the "strongest," the chemical colors beginning with the chrome yellows. The carbon blacks, the lakes, the blues, zinc-oxide, zinc-lead, lead oxy-sulphate, lithopone have very little drying power—the carbon blacks none. In this the latter resemble the other inert pigments, of which alone calcium carbonate, which is not chemically inert, possesses drying properties. Ordinary white lead has moderately strong drying properties, differing in this respect according to its chemical constitution.

50. For what purpose are driers added to paint or to the linseed oil used therein? For convenience alone. In most circumstances it is desirable that paint shall dry within a reasonable time, to prevent the adhesion of dust and insects, to avoid the danger of soiling of person or clothes, to enable additional coats to be applied.

51. Do driers improve the wearing qualities of paints? By no means. As the final destruction of the paint film is due to oxidation, anything which hastens oxidation shortens the life of the paint. Therefore, the addition of driers and the proportion of drying pigments in a paint should be carefully limited to the practical necessities above indicated.

52. In China wood oil used in paint manufacture? Not so much as in varnish making; but it has some remarkably valuable properties which promise for it a growing use.

53. Are petroleum oils other than benzine ever used in paints? In rare instances, except where they occur as an adulterant of linseed oil sold to painters and consumers. In some special paints for the protection of metal surfaces, heavy petroleum oils are used to a limited extent to retard the hardening of the paint film. As the linseed oil used in such a combination requires special treatment, these oils should never be used except under expert supervision by the paint manufacturer.

54. What are volatile oils or thinners? Certain liquids which form a perfect solution with drying oils and on exposure to the air, evaporate rapidly and more or less completely. They are turpentine, wood turpentine, benzine or naphtha, alcohol, benzole, etc. Of these the first two named are practically the only ones used in paint, Benzole and a few similar products are used in specialties like varnish removers, bronzing liquids, etc.

(To be continued).

ADVERTISING WALL PAPER.

Wall paper, like many other things, has always been advertised in a too general form. We are certain that nine-tenths of the advertising space given to it could be utilized to a greater profit were more thought and consideration given to the possibilities that wall paper gives for really powerful pulling advertisements.

The average dealer, when advertising wall paper, merely states that he is carrying, or has just received, a fine line of wall paper, or something similar. Usually, it does not occur to him to try and interest more than a probable buyer. Then, for all the advertisement claims, the buyer is quite as likely to go somewhere else. Numbers of people need wall paper who are not aware of it. It remains for the dealer to suggest the fact with a well-reasoned argument that will create a desire for a look at his display.

Wall paper offers wide scope to the imagination. What irresistible mind-pictures may be conjured up before the reader from the beautiful scenic and other designs that are now appearing in wall paper, and thus a desire created that is not possible with the general form of advertising.

EDISON'S WATERPROOF PAINT.

Thomas A. Edison has overcome a sanitay objection to his new style cement houses by producing a paint which will be waterproof and will render cement walls impervious to moisture. Mr. Edison's proposed structures have been criticised on the ground that cement walls absorb moisture and the health of the occupants would be endangered by dampness.

In cement work there is a chemical action which continues after it has set. This action destroys the color effect of ordinary paints, giving a wall a blotchy appearance and causing the paint to fall off in scales. Mr. Edison is satisfied that his new paint is not only absolutely waterproof but that it will adhere to cement walls as well as ordinary paints do to wood.

PUTTY MAKING.

Pure linseed oil and whiting putty is essential to the good result of painting as the paint itself, almost at least. It is made and is not difficult to buy. But there is much false putty on the market. The best putty is made from the best finely bolted gilders' whiting, or English cliffstone whiting and pure raw linseed oil, usually in the propor-

A HEART-TO-HEART TALK TO DEALERS

You are not in business for fun, but there is some fun doing business when sales are steadily on the increase and the goods go off the shelf before having a chance to become shop-worn.

There's a way to secure such a condition of things—a way that is making money for many paint dealers, and will make money for you if you will do as they are doing.

This is an age when to make business flourish you must advertise. You say advertising costs money; but suppose you handle goods made by a house that advertises the goods for you, and does it in a way that booms your business and brings trade right to your counter. Suppose your store should be advertised, and an attractive reminder of your business placed in the home of the best paint patrons of your community without costing you a penny—wouldn't it be to your advantage? Of course it would.

IF YOU ARE INTERESTED

in a proposition of this kind—if you want to increase your trade, build up a prosperous business, and make your store the center of the paint trade of your town—write and ask us to explain our methods, and let us show you how we help dealers who handle **Martin-Senour Paint** move the goods. We are doing it for others, we can do it for you. Let's talk it over. Write today.

The MARTIN-SENOUR CO., Ltd.

"Pioneers of Pure Paints"

142-144 Inspector Street, Montreal.
2514-2520 Quarry Street and Archer Avenue, Chicago. (Est. 1878.)

The Winnipeg Paint and Glass Co., Ltd. Winnipeg.

The Maritime Paint and Varnish Co., Ltd, Halifax, N. S.

We have conserved Your Profits

by producing a really high-grade linseed oil paint at a moderate price. Instead of spending our money in advertising after the fashion of a patent medicine concern, we have improved the paint. The result is that

Moore's Pure Linseed Oil H.C. Paint

has no equal in the prepared paint trade. We are giving 10 to 15% better value than any other paint manufacturer in Canada. Actual test proves that Moore's Pure Linseed Oil H.C. Paint cannot be equalled for covering capacity and durability by any other prepared paint on the market. And the moderate price appeals to your customer.

Muresco Wall Finish

is the fastest selling interior wall finish ever put on the market, simply because it is perfectly satisfactory in all points—including price.

BENJAMIN MOORE & CO., LIMITED

New Office and Works: TORONTO JUNCTION, CANADA. New York, Chicago, Cleveland, Carteret, N.J.

Emerson and Fisher, St. John, N.B. Selling Agents for New Brunswick; A. M. Bell & Co., Halifax, N.S. Selling Agents for Nova Scotia, Prince Edward Island and Newfoundland.

tions of 85 pounds of whiting to two gallons of oil. But it is important that the two ingredients be well kneaded together, for upon this depends the working and wearing qualities of the article, in addition also to a sweating that it must have after it has been sufficiently kneaded; this consists in allowing it to lie in a mass for two or more days in a warm room. To make a putty that will harden and dry quicker, add some dry white lead to the whiting. A still harder putty is made by the addition of dry red lead. For sky-lights add white lead and some glycerine, to make the mass somewhat more elastic.

HINTS FOR THE PAINT RETAILER

In handling house paints, the dealer can avoid much touble, do away with countless "kicks" from irate customers, and do much toward popularizing the brand of house paint he sells by informing himself in regard to the surfaces upon which the paint is to be applied.

Paint must have a clean, dry surface to adhere to. If applied over old paint that is blistered or is scaling and peeling off, it cannot be expected to hold. The old paint comes off and carries the new paint with it. This is the cause of more complaints and trouble than any other.

In repairing an old house, the first requisite for a successful job is to remove every particle of loose, scaly paint with scraper or wire brush. As a general proposition, two coats should be applied on old work, for the reason that the old paint absorbs so much oil from the first coat that sufficient is not left on the surface to insure durability and weather-resisting qualities.

On new work these coats should be applied to secure the maximum wear.

Paint should never be applied on damp lumber or in damp weather. The chances are that it will blister and peel off, because the moisture in the wood will be drawn out by the sun and will force the paint off as it comes out.

Be careful to caution customers to follow directions as to thinning and applying house paint. If this is done, the dealer's troubles are "nil."

Another thing is to see that each coat of paint is dry all the way through before applying next.

There are "seasonable goods" in paints as in other lines. The progressive dealer will recognize the benefit derived by bringing such goods to the front and pushing them.

Here's an important point for you to bear in mind and tell the customer who harps on price. The value of a paint is not its price per gallon or pound—but the length of time it lasts looks well. Figure the cost per year of keeping the house well painted, not the cost per gallon.

Don't be weak on the price proposition, it's really a secondary consideration. "Quality is remembered long after price is forgotten."

THE VALUE

of a paint is in the quality of finish and wearing results it gives.

IMPERIAL BARN PAINT

looks so well, and wears so well, on either wood or iron, we could easily charge more for it, and still our agents and their customers would consider it excellent value.

THE CHEAPEST and best cheap paint offered to the trade. Wears on the job, not off.

LUCAS GENUINE IMPERIAL FRENCH GREEN

presents a striking contrast when placed in comparison with any other green that has ever been produced. It will not fade or turn dark. For this reason a surface which has been covered with Lucas Imperial French Green will present as attractive an appearance, ordinary wear and tear excepted, in two or three years as it does the day it is put on.

Because of its superior covering capacity it is more economical for property owners, and because of its easy application more profitable for painters than any other green made.

In the last few years there has been an effort on the part of a few paint producers to imitate

LUCAS GENUINE IMPERIAL FRENCH GREEN

We believe they have succeeded in fooling very few persons, although the label resembles in its general appearance the Lucas label.

We desire, however, to advise our patrons and friends once more that the effort to FOOL and DEFRAUD buyers of paint is being continued, and to suggest that the great body of honorable painters and dealers throughout Canada guard against this despicable kind of fraud.

Mistakes and Neglected Opportunities

MATERIALLY REDUCE THE PROFITS OF EVERY BUSINESS

Mistakes are sometimes excusable but there is no reason why you should not handle Paterson's Wire Edged Ready Roofing, Building Papers and Roofing Felts. A consumer who has once used Paterson's "Red Star" "Anchor" and "O.K." Brands won't take any other kind without a lot of coaxing, and that means loss of time and popularity to you.

"Seeing is Believing"

¶ As the Ross Sporting Rifle represents the best in modern rifle manufacture, the highest grade materials and minute accuracy in workmanship, it is to your interest to learn fully about this Canadian Rifle—

¶ The Ross Straight Pull 303 Sporting Model M is one of our leaders to retail at $26. The barrel is the celebrated Ross high pressure, non-fouling, gun-barrel steel — The breech action is dependable.

Our representatives are now demonstrating the merits of this rifle—It places you under no obligation to drop us a line to make sure you will be on their calling list.

Our advertising policy is co-operative.

THE ROSS RIFLE CO., - QUEBEC

ASK ANY PUMP MAN

who has ever used our Fig. 92, and if he does not say "it is the best ever" then we will acknowledge "the exception which proves the rule." There is no use looking for anything better than we have in our catalogue and prices must of course be right as well. Let us have a little talk together.

The

R. McDougall Co., Limited

GALT - CANADA

Chances for Business

In these days of prosperity large public buildings are constantly being planned in all parts of the country.

These are your chances for getting business.

Good air is a necessity in all buildings, but more especially in those built for public use.

The best way to get good air is by the use of our

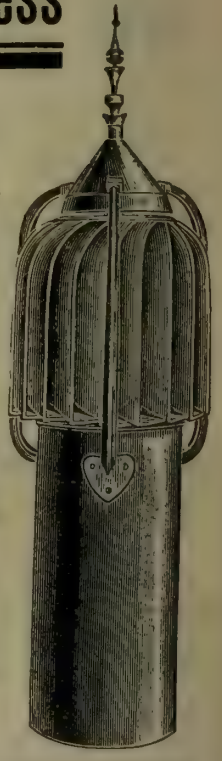
AEOLIAN VENTILATORS

They have been tried all over Canada, and have never failed to give complete satisfaction.

Montreal, June 15th, 1903

Messrs. J. W. Harris Co., Limited, Montreal.

Dear Sirs,



In answer to your request, we take very much pleasure in saying that we have your system of ventilation installed in our Church for several years and it has given us entire satisfaction.

Fre. MARIE RAYMOND, O.F.M.

Something You Ought to Be Selling

The New Century method of washing has succeeded, not because of its ease, speed and simplicity only, but because it gives better results than are possible with any other method.

This machine has a wringer stand too, not a rickety affair, but a convenient, strong, rigid attachment, always in position, never in the way.

New Century Style "B"

The experience is in the machine. You'll hear no complaints of it and have no excuses to make.

They are the best there is.

Dealers, don't load up with experiments, it is a losing game

CATALOGUES ON REQUEST

American Twin Freezer

Freezes two flavors of Ice Cream or an Ice or Sherbet and Ice Cream at one and same time, in one freezer.

SOMETHING ENTIRELY NEW —NEVER DONE BEFORE.

THE can is divided in two parts by a vertical partition. One flavor is placed in one, the other in opposite side of can, in each of which the scrapers, etc., operate. The can cannot be turned as in old style freezers, because of the partition. It is therefore swung to and fro by a rocking motion of the crank. This is a more comfortable and much easier movement. It is very much less tiresome than turning a crank. One can sit back in a chair with freezer alongside and rock the crank to and fro without discomfort or undue exertion and even read at same time. Although two flavors are frozen at once and with less exertion, no more time is required than in old style freezers.

The **Pails have electric welded wire hoops,** which are guaranteed not to break or fall off; Cans are of heavy tinplate with **drawn steel bottoms** that are guaranteed not to fall out or break and do not leak, the strongest and most durable Freezer Can made; the **Automatic Twin Scrapers** by their positive action insure perfect scraping of frozen particles from side of can. All inside parts are heavily coated with pure block tin, and outside parts all thoroughly galvanized.

SOLD BY LEADING JOBBERS

GALVANIZED IRON

Our trade in Galvanized Iron Sheets is a large section of our business. We carry big stocks and wide ranges of sizes and gauges. Orders for spring delivery should be placed now so that shipments may be made with the opening of navigation or the inauguration of summer freight rates.

Ask our travellers for prices, or write Montreal or Winnipeg.

Our stock includes the following brands, sizes and gauges:

"QUEEN'S HEAD"

Famous for its working qualities, finish, flatness and even weight.

72 x 24 in. x 24, 26, 28 gauge.
72 x 30 in. x 16, 18, 20, 22, 24, 26, 28 gauge.
72 x 36 in. x 22, 24, 26, 28, gauge.
96 x 24 in. x 26, 28 gauge.
96 x 30 in. x 24, 26, 28 gauge.
96 x 36 in. x 24, 26, 28 gauge.
120 x 30 in. x 28 gauge.

"COLBORNE CROWN"

Our own brand. It has an established reputation for high quality.

72 x 30 in. x 24, 26, 28 gauge.
96 x 30 in. x 24, 26, 28 gauge.
96 x 36 in. x 24, 26, 28 gauge.

"APOLLO"

The best American iron, heavily coated, flat and of uniform gauge.

72 x 30 in. x 16, 18, 20, 22, 24, 26, 28 gauge and 10¾ oz.
72 x 36 in. x 24, 26, 28 gauge and 10¾ oz.
96 x 24 in. x 28 gauge and 10¾ oz.
96 x 30 in. x 20, 22, 24, 26, 28 gauge and 10¾ oz.
96 x 36 in. x 24, 26, 28 gauge and 10¾ oz.

We can also fill at any time orders for a great variety of weights of black and tinned steel sheets, and tin and terne plates.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines These enquiries come from Wholesalers, Manufacturers and Retail Dealers, who usually intimate they have ooked through Hardware and Metal, but cannot find any firm advertising the line in question. In the majority of cases these firms are anxious to secure the information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay them to advertise in larger space.

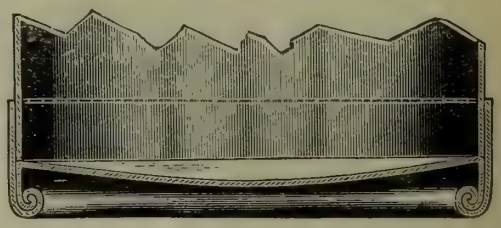
PARTRIDGE & SONS - Proprietors

Davidson's BROAD HOOP ROLL RIM BOTTOM MILK CAN TRIMMINGS



Cheese factory sizes from 10 to 40 Gall.

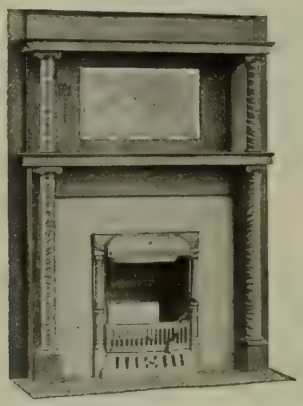
IN COMPLETE SETS

Comprising 1 Broad Hoop Bottom, 1 Cover, 1 Centre Hoop 6 in. wide, 20 gauge, 1 Broad Top Hoop, 1 pair Cover Handles, 1 pair Side Handles.

See how the outer and inner rims are rolled in and then rivetted to bottom hoop.

Diagram showing how strongly our Roll Rim Bottoms are constructed.

The heavy rolled edge makes this bottom doubly durable and saves all wear and tear to factory floors and waggons.



Our bottoms are made concave and drain to the centre and are therefore easy to wash out.

They do not corrode like those which drain to the side.

Our Milk Can Trimmings are unexcelled for ease of making up and our Patent Roll Rim Bottom makes a strong, neat and fitting completion to any Milk Can.

We also carry in stock Tinned iron cut to size for Milk Can bodies, which we can supply promptly.

MAKE YOUR OWN LIGHT

IT'S CHEAPER AND BETTER.

"S. S." GAS LIGHTING MACHINES

A Few Points of Superiority based on Comparisons let US tell YOU about the others.

MODEL E MACHINE

OUR No. 1 SINGLE ARC
500 Candle Power

OUR No. 3 SINGLE ARC
500 Candle Power

OUR No. 2 SINGLE ARC
500 Candle Power

THE "S.S." GAS LIGHTING MACHINE—The only gas machine that runs without pumping under a uniform pressure. The only gas machine that will successfully operate one gas fixture if desired. The only gas machine that can be generated in thirty seconds and without the use of alcohol or liquid gasoline. The only gas machine with a safety vent and escape pipe. The only gas machine with an automatic governor. The only gas machine with a seamless generator and the only one withan entirely seamless copper tank.

THE "SYLVESTER" LIGHT—Increases the brilliancy 100 per cent. Decreases the operating cost 50 per cent. No globes to break or clean. No mantles dependent on wire or magnesian supports. Less heat than an electric arc and gives more light. No odor from unburned gas or the products of combustion. No sound from the light, absolutely noiseless. No shadows cast all light thrown down. No flickering, the only steady light upon the market. A gas fixture more ornamental and unique, has never been invented.

Not one drop of oil passes through a hollow wire. We can give you cheapest insurance.

THE "SYLVESTER" NEW PROCESS MANTLE. Shipped in an envelope. Upon removing from envelope, can be crumpled up without danger of breaking. When straightened out, it's just as good as new.

WRITE US FOR PRICES—DO IT NOW.

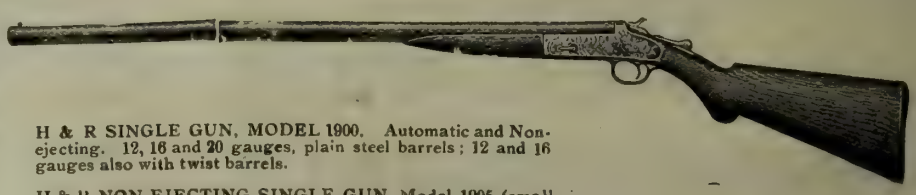
H&R

GUNS AND REVOLVERS

are profitable articles for you to handle, Mr. Dealer, because of the extensive advertising and the absolute satisfaction they have given to discriminating purchasers for over thirty-five years.

We are constantly impressing upon the mind of the public—your customers—the superiority of H & R Guns and Revolvers—the simplicity of construction, accurate and reliable shooting qualities, perfect balance and beautiful finish.

Our catalogue tells about our full line and gives valuable selling points.



WRITE FOR IT.

Here is the New Target Grip

The realization of a long-felt want. Light, compact, durable—the first combination of a medium-priced revolver with a perfect full grip. The extension hard rubber stock affords a perfect grip. It is fitted to the frame, and by having the regular stocks (furnished extra) can be interchanged for pocket use.

Our new grip prevents slipping and twisting, insures a positively secure hold, because it fits the hand naturally, insuring confidence, which means a steadier aim and greater accuracy in shooting.

H & R SINGLE GUN, MODEL 1900. Automatic and Non-ejecting. 12, 16 and 20 gauges, plain steel barrels; 12 and 16 gauges also with twist barrels.

H & R NON-EJECTING SINGLE GUN, Model 1905 (small frame). 28 gauge, 44 and 45 calibers, plain steel barrels.

Co-operative Act to Become Law

Measure introduced in Parliament last year by Mr. Monk to be put through this year as Government Measure—Protests by merchants count for little—Law aims to allow workers or farmers to form companies at smaller cost than mercantile corporations—A few co-operative enterprises in Canada that have gone under.

From our Special Ottawa Correspondent.

Ottawa, Jan. 15.—Mr. Lemieux, Postmaster-General and Minister of Labor, has just returned from the far east, and as soon as the Japanese immigration question is disposed of the Minister will take up one of the most important measures affecting the working classes, both agricultural and artisan, which has been before Parliament in recent years. As the Industrial Disputes Act is generally spoken of as the Lemieux Act, so the act respecting co-operation which will become law this session, unless something unforeseen happens, will be known as the Monk Co-operation Act. Mr. Monk introduced his bill originally in the session of 1906. After the second reading it was referred to the committee on banking and commerce, and there it was held up for the remainder of the session. The member for Jacques Cartier reintroduced the bill last session, and his suggestion that it be referred to a special committee of the House was accepted by the Government. Several meetings of the committee were held, many important witnesses were heard, both for and against the measure, and the outcome was a unanimous report recommending the adoption of Mr. Monk's bill by Parliament with a few changes. Mr. Lemieux, who was chairman of the special committee, gave a specific pledge to the House that he would take charge of Mr. Monk's bill this year as a Government measure, and for this reason it will readily be understood that the bill is bound to become law. In very few instances in this country is a Government measure ever defeated, and it will require the strongest possible pressure to induce the Government to depart from its promise with regard to this particular bill.

The Legislation Outlined.

The bill last year was entitled, "An Act Respecting Industrial and Co-operative Societies." This year, however, it is known simply as "An Act Respecting Co-operation." Its special object is "to provide for the creation and organization of industrial and co-operative societies among the farming and laboring classes of Canada." It is proposed to place the administration of the Act under the Minister of Labor by application to the Department of Labor. Any number of persons, but not less than seven, may be incorporated as a co-operative society. The corporate name of the society shall not conflict with that of any existing organization. The shares are to be determined by by-laws of the society, but no share shall be less than one dollar. No society is to be permitted to carry on the business of credit and savings, unless such society lays aside twenty per cent. of its yearly net profits in order to establish a fund to meet losses. The advancing of money by loan, discount or otherwise, or the acceptance of deposits from any person other than members of the society is prohibited. The banking operations are to be limited to the electoral division in which the head office is situated, except in the case of cities which may be composed of one or more electoral divisions, such as Toronto and Hamilton, when in such case the Minister may authorize the society to transact business within the limits of the city. In the case of co operative banks, the members of the board of management shall not have the right to borrow, either directly or indirectly, from the society. Provision is also made in the act for a board of supervision, for annual returns to the department, for the inspection of books, for investments, for the adjusting of disputes between members, for the amalgamation of several societies within the same district. The schedules to the act contain the form of application to the Department of Labor for incorporation, draft rules of societies incorporated under the act; and the form of the annual return to be furnished to the Government.

It will be gathered from the foregoing synopsis that considerable care has been bestowed upon the provisions with respect to co-operative banking, but it will be readily understood that the machinery provided will apply to any class of distributing society.

The testimony adduced before the special committee last session was of a most interesting character. Much was said with regard to co-operative banking, but in addition considerable information was forthcoming regarding the work of distributing societies in different countries.

Co-operative Credit Societies.

Alphonse Desjardins, president and manager of "La Caisse Populaire de Levis" (The People's Bank of Levis) was examined specially with regard to the co-operative savings and credit features of the bill. He stated that he had given special attention to the co-operative societies of Europe and had for ten years enjoyed an active interchange of correspondence with many continental leaders of the movement. Mr. Desjardins referred to the educative feature of co-operation on the poorer classes as a valuable factor and traced the reasons for this. He explained in detail the methods of operation in the credit associations established under the co-operative system, and particularly the plan of the Caisse Populaire at Levis, Que. Levis is a town of 7,000 with an industrial population, the industries being railways, foundries, one or two machine shops, and a shoe factory. Some of the country around Levis is included in the scope of the People's Bank. By-laws were adopted on December 6, 1900, about 50 citizens being at first associated together. On January 25, 1901, the first semi-monthly financial statement showed assets of $242. On January 21, 1907, the total assets were $48,775. Mr. Desjardins explained how the capital had been got together, the system of loans and the general conduct of the business of the association, which during six years had loaned over $200,000 and had not lost one cent. This was not exceptional, Mr. Desjardins contended. He mentioned a letter he had received from Luigi Luzzatti, chairman of the Popular Bank Association of Italy, in which that gentleman stated that in 41 years' experience with 800 popular banks, the loss amounted to one-tenth of a cent on each two thousand francs loan for the whole period. Mr. Desjardins gave his view of the reasons for so small a loss in co-operative banks. Discussing the expenses of the operation of the Levis Bank, Mr. Desjardins stated that during the six years of its existence they had amounted to $547, including cost of printing. The whole work of the association was done without salary or indemnity, and the office was in his own house. Mr. Desjardins explained in detail the system of auditing, but showed that to a large degree the operations of the society were based on the character of the individual mmber, a vital point in connection with which was that all the members were well-known to each other and were mutually interested in protecting the interests of the association.

Mr. Desjardins mentioned that a year after the Levis Bank had started a similar institution had been established at St. Joseph de Levis, and two years ago a third was established at St. Malo; both the latter are doing well.

Mr. Desjardins gave as his opinion that the five or six co-operative societies which had been started during the past 20 years in Montreal and had gone to pieces, were not genuine co-operative associations; they were so in name, not

in fact. He laid before the committee the by-laws governing the expulsion of members of the Levis Bank to show the care exercised with regard to the question of membership and especially as to the trustworthiness of each member.

Co-operation in Agriculture.

Mr. Desjardins quoted figures which show that there are in France now 18,000 co-operative agricultural associations, established for various purposes and including thousands of village banks. The membership is over 800,000. There were even co-operative associations for the insurance of cattle, insurance of crops against hail for almost all purposes imaginable, which purposes could not be approached at all with profit, he supposed, by the industrial insurance system. Banking or loaning co-operation had developed wonderfully in Germany, while other aspects of co-operation had been neglected. Similarly, distributive co-operation had been the special form developed in England; and productive co-operation up to about ten years ago had been better developed in France than elsewhere. Each country had its particular needs and those needs had to be satisfied by peculiar associations. In Canada, it might be found necessary to amalgamate two or three present forms of co-operation, or a new form might be evolved adapted to those districts where colonization is proceeding. Mr. Desjardins had had no practical experience of distributive co-operation, but from what he had read and studied, he saw no reason why success could not be achieved in other forms of co-operation.

F. O. Dugas, member for Montcalm, stated that in the county of Montcalm the average crop of tobacco was between three and four million pounds. He had studied the present bill and thought its provisions would be of great use to the farmers of his county. In Canada tobacco was put on the market without being properly cured. In the United States farmers who grew tobacco dried it in their sheds, and it was then sold to other parties who redried, cured and sorted it. There was no such thing as this latter procedure in Canada. He was quite sure, if the bill became law, making it possible for a company to be easily formed, there would not be one but several societies of the kind organized in his county. There were about 25 tobacco traders in the county, each of whom made at least $1,000 a year, representing $25,000 a year taken from the farmers of Montcalm. The dealers sold the tobacco to the manufacturers without improving it, acting as agents only.

J. A. Ruddick, Dairy and Cold Storage Commissioner, of the Department of Agriculture, stated that he thought there was a strong disposition in Canada amongst dairy farmers and fruit growers towards the co-operative movement. Most of the cheese factories of Quebec Province contained the germ of the co-operative principle, inasmuch as the farmers consented to bring their milk to one point to have it manufactured. In some cases the farmers owned the factory. There were some that were truly co-operative factories, but a great many were purely joint stock companies. Referring to the success of co-operative methods in Danish agriculture, Mr. Ruddick stated that the first co-operative creameries were established in Denmark in 1882, and there were now over 1,100 in the country, besides about 200 privately owned concerns. He traced the growth of the movement and showed the remarkable effect it had had in developing the dairy industry of Denmark. He though in the long run the establishment of co-operative societies on a similar basis in Canada would have the same result. He instanced the fruit industry particularly, as one to which the movement might be applied with advantage. The great lack in the apple trade was that of organization. There were, however, 25 associations of a co-operative character already established in Canada, and working very successfully. Mr. Ruddick indicated the names of these associations, all of which were located in Ontario, and read a copy of the by-laws by which they were respectively governed. The capital stock was held in shares of a dollar and no member could hold more than 20 shares.

Canadian Conditions Not Favorable.

Prof. Adam Shortt, of Queen's University, Kingston, thought Mr. Monk's measure suited to a number of Canadian industries. Co-operation was to be found in its chief working in Europe, where the conditions were favorable and many different organizations had been developed. Prof. Shortt indicated the special forms of co-operation that different parts of Europe had developed, and commented on the peculiar fluidity of capital and labor in America, which was not tied to locality so much as in Europe. The consequence was that the tendency to concentrate labor and capital in the same locality was not so necessary nor so developed. At the same time, there were certain lines in which co-operation in the form indicated in the bill was very necessary to supplement our process. Many of the co-operative movements in agriculture in Western Ontario had been eminently successful. He approved the general principles of the bill, but took some exception to the banking phase of the measure. He particularly dwelt on the difference in the banking methods of the North American continent and of Europe. The witness also proceeded to discuss the application of the co-operative method to different businesses.

A. McNeil, head of the fruit division of the Department of Agriculture, gave evidence showing the excellent results of co-operation as applied to the apple industry in Western Ontario. Such organizations usually originated in the action of eight or ten or more farmers who made a mutual agreement to put their fruit into the hands of a manager for sale and did not otherwise organize. A step beyond this is taken where the farmers had organized under the Cold Storage Act in Ontario, and under similar Acts in British Columbia and Nova Scotia.

The witness explained various ways in which co-operation would, in his opinion, prevent the waste of fruit and gave in some detail the plan of operation of the existing associations.

There was no more effective way, he believed, speaking as chief of the fruit division, of enforcing the Fruit Marks Act than by organizing apple growing districts into co-operative associations. There was every incentive for the members to obey the law and see that it was observed.

Help Officials to Buy Cheaper.

W. L. Mackenzie King, C.M.G., Deputy Minister of Labor, said he had spent a year in Europe investigating industrial conditions, and during that time went carefully into the question of co-operation in England and on the Continent. Mr. King outlined the character of different co-operative associations organized by the students at Harvard, and explained their working. He thought a co-operative society would be a great advantage to the members of the civil service in Ottawa, and would increase their income on an average by 10 or 15 per cent. Mr. King read to the committee the views of Prof. Robertson, as to what the co-operative movement had accomplished in the development of agricultural industries in Canada, particularly dairying. He placed in the hands of the committee official reports of various other co-operative enterprises in Canada, and read a communication from the correspondent of the Labor Gazette, at Guelph, with regard to a co-operative association which had been formed there among workingmen with a view to meeting what they thought were excessive prices being charged for bread. The Guelph Co-operative Association, which was started as a consequence, had proved very successful.

Mr. King also brought to the attention of the committee the co-operative movement introduced among the fishermen on the coast of Labrador by Dr. W. T. Grenfell, the well-known medical missionary of that region.

Asked by Mr. Verville, whether under the proposed Act, 500 of the laboring people in a city could establish a co-operative bank for themselves, Mr. King replied: "They could start a co-operative society for the purpose of obtaining credits. I think the use of the word "banking" is a misnomer; it is rather a system of mutual credit based on knowledge."

Unquestionably, he thought, in a large city of 300,000 and more, such a credit system could be established so as to help the members. "I think what would happen in a good many cities is that the men who had formed themselves into trade unions would very likely form associations also for the purpose of mutual credit." Mr. King did not think organized labor in Canada had given much consideration to the question of co-operation, save in districts such as

Nanaimo and Cape Breton, where there were men from the Old Country who had seen the movement. Mr. King believed the present measure would permit of credit societies being formed and would, he thought, deal a blow at the usurer. He added that the workingmen might hope, by means of the co-operative movement, to improve their standard of living by decreasing the cost of living, and he was inclined to think that "as the co-operative movement makes headway we will find industrial strife begin to diminish in proportion."

Governor-General Favors Law.

His Excellency, Earl Grey, Governor-General of Canada, appeared before the committee by request and made a statement of his views on the subject of co-operation. Lord Grey said he was president of the International Co-operative Alliance, the object of which was "to make known to civilized peoples of the world what are the methods and aims of co-operation, to explain the principle and to point out the methods by which that principle can be applied to the industrial life of the people." He did not propose to refer in any way to the provisions of the bill before the committee. He had visited the Caisse Populaire at Levis and he believed the bank started by Mr. Desjardins had already proved a great assistance to many, and it appeared to him to have this distinctive feature, that while it did much good it did no harm. He had satisfied himself from an examination of the books of the association that it was conducted on safe business lines.

Earl Grey commented on "the remarkable and most encouraging success which had followed the establishment of agricultural banks in Continental Europe and in Ireland and India," and gave what he believed to be the reasons for this success. His Excellency proceeded to indicate the result of his reading and observations as to the working of co-operative institutions in various European countries. Starting with Denmark, the Governor-General showed how the movement had originated in 1864, and that there were now nearly 1,000 societies with nearly 200,000 members; this for a population of under 2,500,000. His Excellency indicated the industries to which the movement was applied, dwelling particularly on the co-operative dairy started 25 years ago, and now exporting $12,000,000 to $13,000,000 yearly to English co-operators alone.

In Ireland the first co-operative society was established in 1889, and now contained 891 co-operative societies affiliated with the Irish Agricultural Organization Society, with a total membership of 90,000 members and a trade turnover for 1905 of $10,000,000. The co-operative association included 300 creameries, 150 agricultural societies and 230 credit societies, and there were, in addition, poultry associations, flax societies, beekeepers' societies, and various home industries' societies.

The chairman (Hon. Mr. Lemieux) remarked that the Minister of Finance had stated that he would not object to the bill provided the word "bank" is not used; the bill could be amended to avoid the use of that word.

Retail Merchants in Opposition.

The bulk of the testimony before the committee was in favor of the co-operative principle, but the opposition side was also heard, Mr. E. M. Trowern, of Toronto, Dominion Secretary to the Retail Merchants' Association of Canada, representing 10,000 merchants, said he had been delegated, together with Mr. Beaudry, the Dominion Treasurer, to submit to the committee such information as they had on the subject of co-operation. He read the following resolution which had been passed by the Dominion Board of the association, viz.:

"That whereas a bill has been introduced at Ottawa by Mr. Monk, asking the government to endorse co-operative societies, and to give them special privileges to the detriment of the retail trade, that this association do all in their power to defeat this measure."

The board had obtained the opinion of the various branches before passing the resolution. The witness took exception to the measure as not attempting to form co-operative societies among the farmers and laboring people by enabling them to work together and pool their money together and divide the profits. It aimed at giving the farmers and laboring people of the country "an opportunity of combining together, getting any one's capital that they might like to get, and by combining, to destroy the retail and wholesale merchants of this country." In the first place the bill dealt with trade and commerce, and should come under the Department of Trade and Commerce if brought into effect, and not that of labor. He objected to the clause that authorized municipalities to invest their money in these societies. He regarded it as a trap laid for the uneducated people who knew nothing of trade and commerce. In Scotland, co-operation had destroyed the retail and wholesale business and it had been done by offering dividends to the public to buy in these stores, which had congested and centralized trade. Mr. Trowern claimed the measure was unfair to the retailer because the officers of the association could not be reached as easily as an ordinary merchant in the event of his misrepresenting the goods he sold. He stated: "If the bill goes through, you will require a specific clause inserted that the president or secretary of these co-operative societies should be held responsible for the deeds of these societies, as we are as retail merchants." Mr. Trowern further claimed that experience in Scotland had proved that, "the man in the co-operative concern who does the buying from the manufacturer has had paid over to him without the full knowledge of his confreres certain moneys for himself to divert trade into the co-operative channel."

Law Gives Special Privileges.

W. C. Ellis, of Ottawa, made the following statement with reference to a remark by Mr. Monk concerning the object of the bill: "Mr. Monk has mentioned what, to my mind, is the whole point of the objection I would take to this bill; if the retail merchant, or any other merchant, wholesaler, or anybody else, wants to form a company, he has to pay for a charter in order to do so. These people are asking for the privilege without paying for it. That is where the unfair competition comes in. The poor retailer in the city has been living here and paying his taxes in order to do business. He has been paying clerks and paying taxes, and he has been an advantage to the city. And now the people themselves, who have been the retailer's customers, we will say, want to reap the little profits that he has been making. They want to get together, but they don't want to pay the couple of hundred dollars necessary to get a charter. But if that merchant wanted to start a company, he would have to get a charter. That is the whole thing; that is unfair to the retailer."

Mr. Beaudry, of Montreal, Dominion treasurer of the Retailers' Association of Canada, gave evidence along the same lines as that of Mr. Trowern and Mr. Ellis. He said the great problem in business to-day was this; quality, quantity, and price had to be considered, and in any business transaction these considerations could not be ignored. The bill would permit the operation of co-operative societies by which the members could go direct to the source of supply for their goods, thus doing away with the middleman's profit. The bill also proposed to permit members of co-operative societies to do their own banking. The preamble declared that the bill was for the poor man. This could not be so because a poor man would be out of it. The man who wanted to go into business must have capital, and a co-operative society similarly must have capital. The principle of the bill reversed the system of distribution of goods. There was no way to distribute goods cheaper than through the wholesaler and retailer. If they could produce evidence to him that goods could be distributed in Canada to-day at less cost than through the wholesaler and retailer he would be in favor of the bill. He would not say that the banking privilege granted by the measure would hurt the retail men but if men inexperienced in banking were allowed to carry on such business, and they failed, it would discredit banking in Canada.

Co-operators Avoid Personal Responsibility.

The evidence of this witness was challenged by several members of the committee. Mr. Smith, of Nanaimo, asked; "If the retail merchants have the right to sell goods, and the public themselves are granted the same right, is it not putting them in a position of equality?" Mr. Beaudry replied: "Certainly. But that is not the effect of this bill." Mr. Smith contended that this was the root of the whole matter, to which Mr. Beaudry retorted that the public wanted to get the right by means of special legislation, by avoiding personal responsibility. If any men wanted to form themselves into a company to-day they would have to pay from $200 to $600, whereas, under this bill, any score or twelve men could escape that payment. In conclusion, Mr. Beaudry once more emphasized the fact that quality, price and quantity were the three principles to be considered, and there should be an enactment making misrepresentation with

regard to these things a criminal offence.

As previously stated, the special committee, despite the objections raised by the representatives of the Retail Merchants' Association, reported in favor of the bill, with certain changes. The report in part is as follows :

Special Committee Favors Bill.

"From the evidence, derived from persons who have made a special study of the co-operative movement in Europe, it appears clearly that co-operation offers very great advantages to the farming classes, particularly in certain branches of agricultural pursuits, such as dairying, market gardening and fruit culture. Co-operation has also been proved of great use in the purchase by farmers of agricultural implements and fertilizers.

"Your committee found that co-operation offers a means for the laboring classes to purchase, under the most favorable terms, the necessaries of life and the articles required for the exercise of any trade. It also provides a system by which the wage-earners can either build or acquire their own homes, by means of small loans from credit and saving societies.

"Your committee have given the credit and savings feature of the bill their special consideration and have arrived at the conclusion that any general movement to foster co-operations destined to provide small loans and means of investment for people whose situation removes them from the sphere of action of our ordinary banks, should be encouraged. In dealing, however, with this feature of the proposed measure, your committee have provided special clauses destined to surround the exercise of the credit and savings power by these societies with all necessary guarantees to prevent any possible abuse.

"The interesting experiment made by Alphonse Desjardins with the institution known as 'La Caisse Populaire de Levis,' establishes clearly that this special form of co-operation is productive of the best results and can be carried out without risk, if under proper control.

"This control and supervision your committee have sought to ensure in the bill.

"The witnesses heard by your committee are persons well versed in the co-operative movement since its inception; their testimony bears out with singular unanimity the conclusion to which your committee have arrived, that the proposed bill, as amended by your committee, if enacted, would be productive of the best results, and your committee, therefore, recommend that the government take charge of the measure and have it passed."

A Few Canadian Failures.

It is singular that many of the co-operative societies organized in Canada have failed to make good. Notably is this the case in Cape Breton. The list of past failures is as follows:

1st. The Sydney Mines Provident Society, Limited, Sydney Mines, C.B., was started in 1863, failed 1905. The knowledge of the workings of these societies was brought from England to Stellarton and Sydney Mines by miners from England. The Sydney Mines Society did for many years a flourishing and profitable business, as the Stellarton store is still doing. The omission of making provision out of their profits for a reserve fund, the withdrawal of capital from the business, and inability to adapt themselves to changing conditions, brought them into difficulties and on the top of these difficulties their stock and their store was burnt.

2nd. The Britannic Co-operative Society, Sydney Mines, started about 1873 This was in opposition to the older society. The mine officials were the chief movers in this undertaking. They failed to take the patronage of the workmen from the other store and in about three years their business went to the wall.

3rd. The International Co-operative Store, Limited, Bridgeport, C.B., was organized in 1885. dissolved in 1898. The influence of the Provincial Workmen's Association in bringing the workmen of the International Colliery together, and the sympathy of the company's agent, together with the help and enthusiasm of the colliery manager, John Johnston, now of Sydney Mines, gave the first impetus to this society. But for the reasons of no reserve fund, withdrawal of capital, necessitated by the removal of members to other localities, and changing conditions in connection with the collieries, forced them to mortgage the property, pay the liabilities and dissolve.

4th. The Reserve Co-operative Store Co., Limited, Reserve Mines, C.B., commenced business 1887, failed 1898. Did a good and profitable business. Benefitted many of the workmen. No reserve fund, slackness of work for two successive winters, and continued rumors of the closing of the colliery, the withdrawal of capital by members removing to other localities, and a change in the management of the store necessitated by the death of the former manager, are cited as the cause of the failure.

5th. The Morien Mutual, Port Morien, started 1888. Failed 1895. Organized in opposition to the Cow Bay Co-operative Store, it was from the first but an ordinary joint stock company. Reckless credit and reckless buying ruined them. Finally the manager disappeared and the business went into the hands of the sheriff. No reserve fund.

6th. The Victoria Co-operative Store Co., Victoria Mines, C.B., started 1889; failed 1895. Failed because the colliery was closed by the Dominion Coal Co.

7th. The Little Glace Bay Co-operative Store Co. started 1887, failed 1894. The business got beyond its depth at the very outset through imprudent buying, and although they struggled through seven years, mutual confidence, so indispensable to co-operation, was never restored. No reserve fund, withdrawal of capital, indiscreet credit and lack of ability to adopt themselves to fast changing conditions, brought them under.

8th. The Old Bridgeport Co-operative Store Co., started 1895, was burnt out a few months after and never re-organized. No reserve fund.

9th. The Workman's Store Co., Reserve Mines, started 1902, failed 1904. Lack of business capacity on the part of the manager, made this business impossible from the very start.

Of the successful organizations the International Co-operative Store at Old Bridgeport, C.B., started with 36 members, and is now doing a business of over $14,000 a quarter.

The Sydney Co-operative Society, Limited, started 1904, was one of the outcomes of the Sydney strike. It is doing a business of about $1,600 a month, has 76 members, but is greatly handicapped for lack of capital and the constant removal of members to other localities; reserve fund 10 per cent. of profit.

The Glace Bay Co-operative Society, Limited, was organized the present year strictly on British lines. Their business for November was $5,300. Reserve 10 per cent. of profits and all admission fees.

The British Canadian Co-operative Society, Limited, of Sydney Mines, started the present year. This society is composed nearly altogether of Old Country co-operatives. Very few of the members of the old store have so far identified themselves with them. They are adopting Old Country methods altogether. While all the other societies allow credit to the amount of four-fifths of the capital, this society gives absolutely no credit even to their members. They now have a membership of 78, and are doing a good business.

The Broughton Co-operative Society, Limited, never started business. About the time they thought of organizing, work at the new colliery was suspended.

At Stewiack, N.S., the farmers have a union for the distributing of farm produce. This union has existed for a number of years.

About five years ago the farmers of Elmsdale, Hants County, N.S., organized a similar business, together with a consumers' store. This business is doing well.

The Amherst Co-operative Store is in its initial stage. Its membership of 70. It is run on the principle of the British co-operative stores. The store is well organized.

It will be seen from the successes and failures of co-operative concerns in different parts of Canada that with proper management a co-operative society may possibly be made a success, but if ordinary business matters are neglected, as was the case with some of the societies in Cape Breton, then failure is bound to result.

The Imperial Paper Mills and the Northern Sulphite Mills, Sturgeon Falls, may be purchased by a number of American publishers, who, owing to the scarcity of paper, are considering the advisability of taking over the Canadian plant which is recognized to be the finest on the American continent, and which is worth in the neighborhood of $5,000,000.

Retail Hardware Association News

Official news of the Ontario and Western Canada Associations will be published in this department. All correspondence regarding Association matters should be sent to the secretaries. If for publication send to the Editor of Hardware and Metal, Toronto.

COLLECTION SYSTEM EXTENDED.

Announcements will be sent the trade throughout Ontario during the coming week, giving particulars regarding the extension of the work of the association collection department, which now includes a third legal letter, in addition to the two form letters which have done such good work for the fifty-odd hardwaremen who have already used the collection service.

Walter B. Laidlaw, solicitor, London Mutual Building, Toronto, has agreed to send from his office strong legal letters to delinquents who have not been brought to time by the form letters, his charge being only 25 cents for each letter sent, he supplying stationery, paying postage, etc.

With this addition the collection department becomes as complete a service as it can possibly be made, short of taking action before the courts, and members of the association secure this at the very minimum of expense.

At this time when merchants have need for every cent of money on their books this branch of the association work can be of exceedingly practical value to the trade. Farmers and other close-fisted delinquents who are hoarding their money in the banks and letting their merchants worry their brains and wear out shoeleather in trying to make collections can be brought to time by the association collection department.

The outfit of 100 envelopes, 60 of No. 1, and 40 of No. 2 letters, is sent express postpaid by the secretary of the Ontario association, 10 Front street east, Toronto, for only $1, to members in good standing. Non-members can join the association for the balance of the current year to May 1, 1908, for only $1 additional, the annual fee being $3 for twelve months from May 1 of each year.

UNFAIR LEGISLATION.

Retail merchants seem to be the constant butt for legislations to throw bricks at and, be it said in all frankness, so long as they fail to organize to protect their interests, they do not get any more than they deserve.

Workingmen can legally meet to arrange prices on their labor commodity, but it is illegal for merchants to agree on prices on the goods they sell. Wealthy manufacturers can secure mutual insurance by depositing large sums of money with the Government, but the merchants are debarred from this class of insurance by the large deposit required, the high wall being built up by the insurance combine. Merchants are debarred from collecting accounts less than $25 by garnishment. The Postmaster-General aims to put through a parcels post c.o.d. act to benefit the wealthy catalogue house magnates at the expense of the retail merchants, turning every postoffice into a collecting agency for the departmental stores. And now the Ottawa Government is to put through legislation making it possible for a number of farmers or workingmen to form business companies without expense, while merchants to do the same thing, must pay large sums for charters for incorporation as stock companies. That's a pretty long list of legislation acting unfairly upon retail merchants, but it is by no means complete.

Several pages in Hardware and Metal this week are taken up with an outline of the proposed Government measure respecting co-operative companies. The article should be read by every hardwareman, and an invitation is extended to each to express his views regarding this and other unfair legislation in coming issues of this paper. Let us hear how merchants can protect themselves. If the present organization is not effective enough, how can it be made more serviceable to the trade?

The Government having decided to pass this law, it would appear to be useless to attempt to defeat it, though it may be possible to secure certain amendments.

Co-operative stores now exist at Hamilton, Dunnville and other centres, but nearly every town and county in Canada has seen some co-operative attempt made and failure result. Farmers and workingmen have lost large sums, but they seem willing to venture again. Merchants, of course, do not like to see trade demoralized, but they have no right to control the actions of the would-be co-operators. They can, with justice, however, protest against the unfair features of the proposed legislation.

The delusion exists that workingmen as a class can better their condition by organizing co-operative stores, and the Deputy Minister of Labor encourages this idea. Leaving aside the question of the probability of failure resulting history has shown that the condition of the workers as a whole in Great Britain has not improved as a result of co-operative enterprises. There are as many poor-houses and as much degradation in Glasgow, Rochdale, Manchester and other co-operative centres as in other parts of the world, where co-operative enterprises do not exist. If the workers can live cheaper they must work cheaper is an economic law peculiar to our present civilization.

A discussion of all matters of legislation unfair to retail merchandizing would be timely in these columns and if merchants are alive to their interests this invitation will not be disregarded.

NEXT MONTH'S CONVENTION.

Arrangements are nearing completion for the third annual convention of the Ontario Retail Hardware Association. The dates are definitely chosen for Wednesday and Thursday, Feb. 12 and 13, and the meetings will be held in a large hall in the Palmer House building, corner of York and King Streets. The Palmer House will be convention headquarters, a special rate of $2 per day being quoted to delegates, who should reserve accommodations as early as possible.

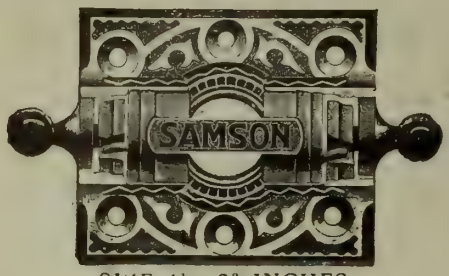
Single fare rates will be obtainable on all railways coming on Feb. 11 or 12, and returning up to Saturday, Feb. 15. No certificates are required, these rates being in force owing to the Ontario Horse Breeders' Annual Exhibition being held Feb. 12-14 at the St. Lawrence Arena, Toronto. Another big event in Toronto that week will be the series of concerts given by the Mendelssohn Choir in Massey Music Hall, Feb. 10, 11, 12 and 15.

In addition to these attractions some of the manufacturers and jobbers located in Toronto are preparing to make exhibits and throw their sample rooms open to visitors. One stove manufacturer from an outside point, is also preparing an exhibit to be located in the hotel lobby.

The convention gatherings are also expected to be more than usually attractive, the success of the "Question Box" feature last year ensuring that not a minute will be wasted at the meetings. The social features also will be such as to live in the memory of all who attend, some surprises being prepared in this direction.

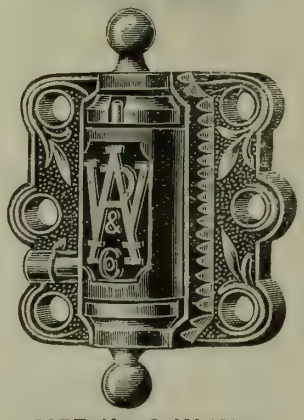
Break away from business the second week in February and visit Toronto to rub shoulders and exchange ideas with your fellow hardwaremen from all parts of Ontario and you are pretty sure to go home satisfied with yourself and better prepared to push for trade during the coming year.

HELP TO RESTORE CONFIDENCE.



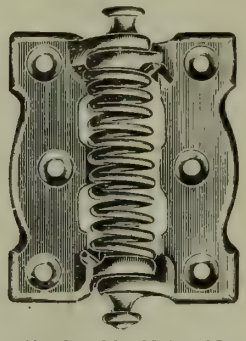
So long as there are unemployed men in Canadian industrial centres, retailers are apt to feel that a depression exists. To put the idle men to work, therefore, should be the aim of all who desire an early resumption of industry.

How can this be best done? By the placing of orders by jobbers and retailers at once for all necessary lines, giving preference in all cases to Canadian manufacturers wherever prices and quality are equal.



The purchase of cheap foreign goods dumped on the market at this time may help foreign manufacturers, but it will not put Canadian workingmen into active service and enable them to become buyers again.

A word to the wise should be sufficient.



D. McNabb, recently defeated for deputy reeve of Orillia, is not the D. A. Macnab, of Macnab Bros., hardware merchants, known to many in the trade on account of his presence at Retail Hardware Association conventions.

STOCK-TAKING SUGGESTIONS.

Immediately following the new year, stock-taking engages the attention of the merchant and staff. Unfortunately, as carried out in some stores, it does not serve its intended purpose. When the work has been completed and the inventory list prepared, the proprietor or manager is by no means certain that the figures he sees before him, and which are supposed to represent the relative positions of his business at that time, and the year before, actually perform their function.

The reason for this—or one of the reasons—is the carelessness of clerks in weighing and counting. In order to ascertain if proper care had been exercised, packages of goods with the stock-taking tickets still on had been reweighed, and it was found that in one care a piece of goods marked 48 pounds actually weighed only 46 pounds, while another was almost as much astray in the other direction. It can be readily seen that discoveries of this character have a not unnatural tendency to shake the merchant's confidence in the accuracy, and consequently, the value of his stocktaking sheets. The point we intend to convey is the necessity for impressing clerks with the importance of exercising the utmost care in weighing and counting.

Stocktaking affords an excellent opportunity for acquiring a thorough knowledge of the stock, and it is taken advantage of to get rid of the undesirable goods, those which, the longer they are allowed to remain, the more undesirable they become. Some merchants do not pay as close attention to this feature incidental to stocktaking as they should.

THE METAL SITUATION.

With the turn of the year the leading metals show a gratifying strengthening movement, and although it would be foolish to indulge in too roseate a vision as to the development of that movement, the present situation offers sufficient grounds to warrant the opinion that the markets are now, at all events, resting on a more solid basis than at any time since the great decline. And that is something, after these many days of storm and stress, for which to be thankful. The merchant, wise in his experience, does not wish to see any great boosting of prices, although it might bring grist to his mill. He has no desire to undergo, just for a while, the painful process of being pushed down a precipitous hill with a heavy load of stock on his back. He realizes that an undue inflation of prices would assuredly bring a similar reaction in its train.

The stronger the foundations, the greater the stability of the house, and the slower the recovery of the markets the greater the chance of permanent strength being imparted to them, in so far as permanency can be applied to anything which has to depend upon the variableness of supply and demand. The metals, and especially so in the case of copper, are not, apparently, being stiffened under a great inflation in the demand, although the call, both domestic and foreign, is brisker day by day. An analysis of the circumstances directly influencing the markets seems to show that the advance is due more to the improved financial conditions in Europe and the American continent, and to a return, in some degree, of confidence in the future.

Supplies are short in most of the metals, and, therefore, the danger of an abnormal demand has to be faced. Manufacturers, however, will not be in a hurry to buy too extensively, and, as the freeing of money will not be rapid, there should be a checking tendency for some time to any big speculative movement. Nothing, however, is to be gained by anticipating trouble. Sufficient it should be that producers generally are trying by curtailing production to keep prices at a steady level with a slight upward tendency, so that the metal markets shall settle themselves down to that solid prosperity which we believe awaits them.

Could we be assured that the vast amount of copper which has been exported within the last few months to Europe from the States has really been absorbed, and were suspicions completely allayed as to the operations in the English tin market of the Chinese syndicate, we should be even more confident as to the immediate future. There is this great point, however, that should these particular metals be assailed again from the quarters we mention, they have now a recuperative power which a short time ago was lacking, and are now in a better condition to stand any onslaught. It is well in these circumstances not to be too sanguine, yet at the same time there is justification for a feeling of confidence in the growing stability of the markets.

CARE OF GLASS CASES.

Most up-to date hardware stores have installed at least one glass show case or silent salesman during the past few years, which have been made to pay for the investment from the time they were installed. In the handling of metal goods the cases soon became scratched, however, unless care is taken.

A subscriber recently asked how to remove scratches from the show cases in his store, and, as this question should interest every hardware merchant, the following is suggested as a practical method of removing scratches:

"Dissolve one ounce of white wax in a pint of pure turpentine. To dissolve the wax place the vessel containing the turpentine over a burner and warm, and apply with a soft cloth. This will in every case greatly improve the surface."

For cleaning glass, a good method is as follows. Mix one ounce of whiting, one ounce of alcohol and one ounce of water of ammonia in a pint of water. Apply with a soft cloth, allow to dry and then wipe off.

Numbers of glass cases are ruined yearly from lack of proper attention. Small cracks appear, caused by heat or contact with hard, heavy bodies, and if these cracks are not at once attended to they soon spread. An excellent method to prevent a crack from spreading is to draw a short scratch at right angles with a diamond or a glass cutter, this will prevent a crack from spreading in every case.

Cases should be set perfectly level on the floor, especially the new all glass variety, which, if this is not done, are certain to warp. The legs of the case should be propped to the required height from the floor to ensure their sitting true. If these methods on the care of show cases are followed out they will likely repay owners for the care taken by retaining a better appearance for a considerable time.

THE SITUATION IN THE WEST

By our Special Winnipeg Correspondent.

The situation in wheat circles continues to be one of great interest, as the market is developing steadily along the lines that have been indicated from week to week in these articles, that is, one of increasing strength, as British buyers and home millers realize that the amount of wheat still in farmers' hands is very small, compared to the same date last year. Thornton, of the Commercial Record, of Duluth, has asked to go on record as stating that the amount of wheat in interior elevators and farmers' hands in the western States is the smallest since 1888. This would not be true of the Canadian west, because of the tremendous increase in wheat areas in the intervening years since 1888, but it is entirely true to say that in proportion to the crop raised the amount in farmers' hands is the smallest since 1888. During the week there have been some serious fluctuations of the American market, but the feature of the Winnipeg market has been its steady strength and the keen demand for cash wheat and the constant shrinkage of the amount of contract wheat coming forward. A striking instance of this was noted on Friday. The inspections showed the receipt of nineteen cars of contract wheat on Thursday and when the market opened on Friday morning one well-known broker came on the floor with buying orders for twenty-three cars of contract grade, he secured the nineteen cars, but was unable up to closing to fill the balance of his order.

Another feature of the market has been the rapidly increasing demand for low grades for export and the consequent narrowing of the spread between No. 4, 5, 6, and the lowest contract grade, No. 3. It is expected that next week will see a greatly increased demand for number three, now that the spread between three and four has narrowed so materially.

Receipts from interior elevators have kept up fairly well all week and, of course, are more than treble what they were this time last year. The weather is simply ideal, no railway company could ask for better weather for the movement of cars and the railways are certainly doing their best, over 100 cars daily have left the head of the lakes during the week. Receipts at interior elevators are not in proportion to the outward movement and many interior elevators have been closed owing to the small receipts and the utter impossibility of operating them at a profit, or, indeed, operating them without a heavy loss.

Trading in coarse grains has begun to move again more freely and the demand for the last few days of the week was decidedly brisk, with a good upward movement in prices. Receipts of coarse grains are light and offerings small.

The wheat market is not the only thing that has engaged the attention of grain men and business men generally during the past week. The report of the Royal Grain Commission has been received and proved interesting reading in many respects, in none more so than their report that the operations of the Winnipeg Grain Exchange are altogether fair and honorable, and in the interests of the farmers as well as of the grain trade. There are a number of recommendations and amendments suggested, one that will meet with almost universal endorsement and that is that the terminals at the head of the lakes be owned and operated by the Federal Government.

But even interest in the report of the Grain Commission has paled before the introduction into the local Legislature now sitting, by Premier Roblin, of an act to amend the charter of the Grain Exchange. The act is brought at the request of the Manitoba Grain Growers' Association and has been drafted by them. It is so sweeping and radical in character that were it to pass, as it now stands, it will practically put the Exchange out of existence, as the present membership would certainly not attempt to work under such a charter. No Canadian bank would attempt to finance men operating under such a charter, as there is not sufficient protection. The bill has passed its second reading and has been referred to the Committee on Agriculture to hear representatives from both sides. The Grain Exchange are, very wisely, saying nothing for publication as to what they intend doing. There was a largely attended meeting of members held on Thursday afternoon last, when the discussions were of a very lively character. It was learned privately that it was resolved to fight the bill tooth and nail, and no doubt this will be done. Just now the Grain Exchange and the Grain Growers' Association are both political footballs and are being made use of for purposes of the next election and it would be hard guessing just what will happen with the bill.

There is a side of the situation that the Grain Growers' Association and farmers generally never appear to have considered and over which the citizens of Winnipeg do not appear to have been any more alert to the interests, but which the towns down by the lakes have seen and prepared to act upon. It is this. The grain trade of the Canadian west would never have been operated under a provincial charter, only, of course, in the old days, when the charter of the Winnipeg Grain and Produce Exchange was obtained apparently no one realized how big a thing the grain trade would grow to. In this way the anomaly has arisen of the grain trade of three provinces, two-thirds of which is exported out of the provinces and a large part of it beyond seas being operated through a Grain Exchange with only a provincial charter, which is subject to amendment at the request of the people of one province only. Long ago the Winnipeg Grain and Produce Exchange should have had a Dominion charter, then, if amendments were required they would have been made in accordance with the needs and wishes of the whole Dominion and not of one province only. With so much agitation stirred up and the near approach of a general election, it is quite easy to understand that the time is not opportune for the present Exchange to ask for a Dominion charter, that would be making themselves the football of Dominion, instead of provincial, politicians.

What, then, is likely to happen should, for political reasons, the present proposed bill of amendments be passed by the Manitoba Legislature? It is more than a probability that the big export houses and the old line elevators, who have already large interests at the head of the lakes, will move their offices from Winnipeg altogether and establish themselves at the head of the lakes, presumably Port Arthur, for the reason that some three years ago the Board of Trade of Port Arthur secured charter powers that would enable them to run an exchange and clearing house. If the big houses go all the brokers and commission men will follow and it is quite among the possibilities that the inspection office will be moved to the head of the lakes.

Of course, the lake towns would be delighted and would welcome the grain men with open arms, indeed, there are whispers that grow louder as the days pass, that overtures have been or are about to be made to secure the export and line elevator houses.

To be strictly truthful, the grain business could be operated, on the whole, quite as well, possibly better, from the head of the lakes than from Winnipeg, but the loss of the Grain Exchange and all the grain trading business to Winnipeg would be a most serious one, far more serious than the average citizen realizes, while it is questionable whether there would be any corresponding gain to the farming community.

It would take away from Winnipeg an enormous amount of the banking business, besides some 150 firms that do business in a large way. It would be an immense loss in prestige, and all for what? Sifted to the bottom, the whole grain growers' grievances peter down to the lack of adequate car supply and careless farming that produces weedy crops of low-grade that are difficult to handle.

In addition to the removal of the Grain Exchange proper, with all its adherents, it would mean the curtailment of milling industry at Winnipeg, for though the present mills would be retained and operated, the head of the lakes would present a more attractive field for the erection of other mills, there is cheap power in plenty and there is no doubt that a sample market would be one of the first things established in connection with such an exchange. The malting companies would give Winnipeg the go-by, they are dissatisfied now because Winnipeg is not an order point for barley, and this difficulty would be entirely gotten over by establishing themselves at the head of the lakes.

The whole question is one of grave seriousness and it is a matter of profound regret that it could not have been adjusted aside from party politics.—H.

ANNUNCEMENT NEXT WEEK.

The editor hopes to be able to make an announcement next week regarding the results of the prize competitions, which closed on Jan. 1. In the window dressing and advertising competitions a large number of entries were made and some close decisions will be necessary in the judging.

Markets and Correspondence

(For detailed prices see Current Market Quotations, page 72.)

MARKETS IN BRIEF.

Montreal.

Ingot Tin—Advances to $32.
Copper—Firm at 15c.
Lead—Unchanged.
Antimony—Still no change.
Linseed—Shaded 2c per gallon.
Ground White Lead—Lowered 25c per 100 lbs.
Red Lead—Eased off ¼c per lb.

Toronto.

Ingot Copper—Advanced to 15c.
Tin—Unchanged.
Lead—Steady.
Pig Iron—Some buying reported.
Lawn Mowers—New lists issued.

MONTREAL HARDWARE MARKETS

Montreal, Jan. 17.—Trade this week has shown promising signs of future activity, although the business done has not been of great volume. Bookings in the provinces of Quebec and Ontario are commencing to arrive freely as travelers are now all on the road, but it is still a little early to expect much business from the northwest, as the representatives are naturally slower to commence operations. Lawn mowers, wire cloth, poultry netting and hose, for spring delivery, are beginning to move, but other lines are, comparatively speaking, stagnant.

Jobbers are now busily engaged in buying, and the clerical work in consequence is very heavy. Representatives of various manufacturers in the States are here in goodly numbers booking orders, and on the whole are satisfied with the business being done. They report that while the orders are of good volume, they are not so big as at the beginning of last year. Trade is quiet in the States, but a large development is anticipated shortly. No advance in price is expected in the majority of lines for some time at any rate. Single guns will cost the dealers more, but ammunition will be much about the same. Collections are reported fair, and the general outlook satisfactory.

Railroad Supplies—The construction work going on in Northern Quebec, and in the province of New Brunswick is stimulating trade, and the various lines are moving well. The mildness of the winter has given this department a good send-off, and with the improvement expected as the spring draws near, a busy season is anticipated.

Lumbermen's Supplies—Orders are picking up, and coil chains can now be added to the various articles which have been moving since the first of the year. The demand is not expected to be up to the average, owing as we have previously stated, to the falling off in lumbering operations.

Builders' Hardware and Supplies—Locks and lock sets are commencing to move, but as the building outlook for the spring is not so good as it was last year, the prospects are not so favorable, although they may improve later on. It will only be a question of time for the building trade to recover itself, for the structural needs of the country are more pressing than ever.

Shot—The season is now beginning, and orders are coming in for spring delivery in duck sizes. The discount is now 20 per cent., with the usual extras.

Nails—Although in one or two instances the recent reduction of 10c. per keg has been still further shaded, prices generally are being well maintained. The demand for future deliveries shows signs of increasing and good trade promises.

TORONTO HARDWARE MARKETS.

Toronto, Jan. 17.—Business is increasing in a satisfactory manner as the month advances, and though trade at present is only ordinary, the prospects for future activity are considerably brighter than a week ago. The situation in Ontario continues to brighten and though the dealers are not buying as heavily for spring delivery as in 1907, the orders coming in are satisfactory to the local jobbers. Prices remain firm and there is every indication of their remaining at the present quotations for some time to come.

This is a busy season for the jobbers; salesmen are on hand in numbers and the warehouse employes are in many cases working overtime receiving stock.

Business reports from the west are also optimistic and a business revival all through the western provinces is predicted to take place in the near future. Booking for builders' supplies, lawn mowers, wire cloth and poultry netting is well under way and garden hose, garden implements, etc., are beginning to show signs of life.

Lawn Mowers—The new lists for spring delivery have been issued and the prospects for this line are quite up to last year's. The following lists give the prices of two large manufacturers:

D. Maxwell & Sons:

8 in. wheel, 3 knives, 12 in. sizes	$2.75
8 in. open wheel, 4 knives, 12 in. sizes	2.85
9 in. wheel, 3 knives, 12 in. sizes	2.95
9 in. wheel, 4 knives, 12 in. sizes	3.05
10½ in wheel, 4 knives, 12 in. sizes	4.00
10½ in. wheel, 5 knives, 12 in., ball bearing	5.70

Taylor Forbes Company:

8 in. wheel, 3 knives, 12 in.	$5.25
9 in. wheel, 3 knives, 12 in.	6.75
9 in. wheel, 5 knives, 12 in.	7.75
10½ in. wheel, 4 knives, 12 in.	8.50
10½ in. wheel, 4 knives, 12 in., ball bearing	10.00

50 per cent. Dated April 1, f.o.b. Guelph.

Builders' Hardware and Supplies—These lines are again beginning to move after the usual winter lapse. During 1907 trade for all makes was brisk and competition keen, and the prospects for another good year seem fair at present.

Shot—Since last writing shot has not changed from a 20 per cent. discount, booking for summer and fall delivery has received a start and orders are coming in satisfactorily.

Copper and Brass Goods—These lines are in some cases being cut, an indication that a reduction is about to overtake the market. The lines are in steady demand and beginning to move freely. Copper pitts are still quoted at 30 per cent. off list and tea pots remain at a discount off list of from 38 to 45 per cent.

Bolts and Nuts—The demand is steady and the market firm. Some booking is being received for spring delivery.

Screws—Screws are beginning to sell again and future orders are being taken up. No change of price has taken place.

Solder and Soldering irons — Prices remain unchanged. Quotations stand ½ to 2 pound irons and are quoted at 40 cents, over 3 pounds at 37 cents. Solder has not changed any during the week, remaining at 20 cents.

Sporting Goods—There is still a fair demand for skates and hockey sticks coming in, though the winter is half over and the spring delivery orders for guns, rifles, ammunition, etc., are beginning to arrive. Retailers will likely pay a little higher for single-barrel shotguns this year, but prices remain unchanged. Curling stones have eased in demand, but the price has remained stationary.

MONTREAL METAL MARKETS.

Montreal, Jan. 17.—There is a brighter tone to metals this week as a result, in a great measure, of the strengthening of copper and tin in the foreign markets. Buying generally has not shown any marked improvement, but although merchants would be glad to note a stronger tendency to purchase, they have this great consolation that prices are steadying without it. Under these circumstances, naturally, there is better hope for belief that there will be no future reaction than there would be if a heavy demand were creating the present strengthening movement.

A heavy inflation of prices would bring no stability, rather the reverse, while now, at least, there is a solid and natural improvement. Slow but sure is how the merchants generally would have the markets in their present convalescent state, and this is the progress at the present moment.

Copper—Copper is a very hopeful feature of the markets generally. It is strengthening in a solid way, both in the States and in the Old Country without the influence of any abnormal demand as compared with previous weeks, and confidence is reviving in copper to a marked extent. The metal is now selling at £63 10s. in the English market, which marks the highest point since the great slump. It is reported that in New York sales have been made this week as high as 14c, but this figure may be slightly over-

estimated. At any rate, the statement is an indication of the trend of the market there. Locally, the price is unchanged, merchants preferring to be certain of their ground before they take advantage of the rally, and we still quote casting copper at 15c.

Pig Iron—Barring a slight movement from stock, the market is very dead. Buyers are still holding off, and the curtailment of production which characterized the latter part of the year will have to be maintained for some time—probably longer than many expected. Prices are still weaker in the Old Country—we now quote Cleveland warrants 48s. and 3d—but the market is firm here at the figures obtaining for some months past: Middlesboro No. 1, $21.50; No. 3, $20.50; Summerlee, $25.50.

Ingot Tin—Tin still continues to improve in the Old Country, and the premium last week of £1 per ton on futures over spot has been reduced to 15s. The confidence felt in the continuance of the copper strength is, however, withheld from tin. The operations of the speculative agencies across the Atlantic are viewed with suspicion, and tin has yet to regain the confidence of the markets this side. Still the advance has warranted a strengthening movement here, and we now quote an increase of 50c, making the price 32c.

Lead—Lead still improves in the English markets, and an advance has been made this week of 2s. and 6d. This, however, has not tended to increase quotations here, and 4½c is still the ruling figure. Should lead maintain its strength we anticipate an advance next week.

Antimony—The sterling price of antimony has been marked up £1 per ton. The local market shows a lot of buying for futures, but present prices remain unchanged.

Spelter—This metal continues to advance in the States, and prices are up ½c per lb, East St. Louis. This is due to the curtailment of production that took place in December. The market quotation here still remains unchanged.

Babbit Metal—The James Robertson Co., Montreal, have issued a new list of prices for babbit metals which will be found under our current market quotations. The firm have introduced a new babbit metal called the Swastika. The formula has been designed with special attention to the wearing qualities of the metal. The alloy contains a high percentage of tin, antimony and copper, and is thoroughly de-oxidized. It is stated that in the testing machine this metal shows the minimum of friction with a high resistance to the crushing strain, and a maximum elasticity. It will keep bearings cool with little lubrication, and will stand the highest speed, and the heaviest pressure. The metal is quoted at 25c per lb.

Old Materials—The improvement in the markets has not affected prices as yet, stocks being too heavy, and buying too spasmodic. We still quote: Heavy copper and wire, 11½c; light copper, 10c; heavy red brass, 11c; heavy lead, 2½c; wrought iron, $12; No. 1 cast, $13; No. 2 cast, $10.

TORONTO METAL MARKETS.

Toronto, Jan. 17.—While no great buying movement has developed, merchants report increased sales and a steadily strengthening tone to the market, a development which, coming as a result of a return of confidence rather than owing to heavy buying, is considered a very satisfactory condition.

The pig iron market is interesting on account of the continued firmness. We have brought down our quotations slightly to meet revised quotations resulting from slight shading done on present delivery orders, but taken into comparison with tin, copper and lead iron stands forth as the only metal which has been free from the results of speculative influences. In our opinion, prices in the second and third quarters of 1908 are bound to be slightly lower than those now ruling, but furnace men are declining to be stampeded into any slump movement. Buying is not large at present, most users holding off for the present, and it would be senseless for jobbers, therefore, to break the market. Negotiations for a reduction in the cost of labor for 1908 are now under way and when this item of cost is settled sellers will be in a better position to deal with their customers.

Ingot Copper—There has been a general strengthening, with the result that local quotations have been advanced to 15c per pound, although there is still some fractional shading of this figure. Buying is normal for this season.

Ingot Tin—We still quote $31.50 per 100 pounds. The foreign market is steady, but there is a disposition manifested by buyers in London to remain aloof, awaiting developments in the East Indies. If the Chinese syndicate is forced to sell, a very heavy black in the market is anticipated, but if London financial interests give enough support to their Straits colleagues prices may still be maintained, but it will be a long drawn out wait for real activity. On the other hand, if a break of from £10 to £20 is experienced, heavy buying will seen turn the market upward, as American consumption will doubtless be stimulated, and during the later months of the year, it is expected, will be heavily increased.

Pig Iron—Our revised quotations are: $21 for No. 3 Middlesboro, and No. 3 Clarence; $22.50 for Londonderry and Hamilton, and $24.50 for No. 2 Summerlee. Bar iron continues at $2.25.

Pig Lead—We still quote $4.35 for imported pig and $4.60 for bars. The market is holding steady at these figures.

Antimony is unchanged at 11c; sheet zinc at 7c, and zinc spelter at: Domestic, 5c, and foreign, 5¼c.

Old Materials—Prices are sagging owing to continued inactivity, and our quotations at the back of the paper show several minor reductions.

U. S. METAL MARKETS.

Cleveland, O., Jan. 16.—The Iron Trade Review says practically no orders for standard steel rails are being placed, and it is evident that the real reason can be found in financial considerations. Leading railroad interests are determined to clear up their 1907 indebtedness before they order rails or other supplies to meet this year's requirements.

This is the season when municipalities begin to place orders for cast iron pipe and a considerable number of inquiries are now in the market. At Chicago, orders for 4,500 tons were placed. Manufacturers of cast iron pipe have been prominent in inquiring for and buying pig iron, and have infused new life into that market. In the central west, interest has centred in the purchase of about 13,500 tons by a Massillon pipe interest. Although the purchase price has been carefully guarded, it is understood that it was on a basis of about $13 Birmingham for No. 2, and that nearly all the tonnage went to southern interests. A sale of 20,000 tons was made to a pipe interest in Philadelphia. The price was based on certain stipulations as to analysis equal to about $13 Birmingham for No. 2.

Operators of coke ovens in the Connellsville region are not acting in harmony and some low prices are being named. Some operators have announced their intention to resume, even at low prices.

U. S. IRON AND METAL TRADES.

New York, Jan. 16.—The improvement in the financial situation is reflected by a better feeling in the iron trade, but as yet there has been little increased buying, except in pig iron, says the Iron Age.

The cast iron pipe manufacturers, east and west, have been buyers on a fairly large scale, one shop in northeastern Ohio taking upwards of 10,000 tons and makers in the Philadelphia district contracting for a somewhat larger quantity. It is understood that these sales were below the figures which the majority of the furnaces are quoting, but the principal question, not yet settled, is whether these transactions clean up the iron available at concessions. The offering of southern iron at $13 for No. 2 Birmingham, do not seem to have ceased entirely. An interesting subject which is now under discussion is the differential between basic and Bessemer pig, which affects the central west more particularly.

Generall speaking, new orders for finished iron and steel are still coming in very slowly, but there is more interest in the markets, and better things are hoped for in the near future.

The steel rail business is very light, and contractors for structural material are still holding back. In Chicago 2,200 tons of bridge material were bought by the St. Paul road, while bids are going in for two bridges at Nashville, calling for 3,000 tons. In the Pittsburg district there may come up in the near future the contract for 16,000 tons for the Pittsburg & Lake Erie bridge at Beaver, Pa. The plate mills are only slightly employed, and there is some shading of prices going on.

In the bar trade the reduction of iron bars to the 1.40c. base, Pittsburg, by western manufacturers, caused largely by the low prices of scrap, is creating uneasiness, particularly since even that base price has not been adhered to. The

makers of steel bars are facing the serious problem of maintaining the present 1.60c base price in the face of that competition. While iron and steel largely occupy distinct fields, so wide a difference must divert some tonnage from steel to iron.

The recent reduction in the price of sheets has led to only moderate increase in the sales, while, on the other hand, bookings in tin plate have been better. This is the season in which a considerable number of consumers enter their spring orders, and that they have done again, to a moderate extent.

While prices for steel merchant pipe are being firmly held, there is some shading in iron merchant pipe. It is not likely that a readjustment in prices of pipe will be undertaken until it becomes clear that there is a good volume of business which may be tempted by a reduction.

The tin market is firmer, the price having advanced 1c per pound to 27¾c. Electrolytic copper, for domestic consumption is being held at 14c, with a moderate business. Lead is up to 3.75c, New York. The price of aluminum, which was 36c, has been reduced to 33c. Overproduction is telling in this branch of the metal industry.

LONDON, ENG., METAL MARKETS.

London, Jan 14.—Cleveland warrants are quoted at 48s 4½d, making prices as compared with last week 3d lower.

Copper—Spot copper opened firm at £63 10s, futures at £63 17s 6d, and after sales of 500 tons of spot and 1,900 tons of futures, closed firm at £63 17s 6d for spot and £64 5s for futures, making price as compared with last week £1 2s 6d higher on spot, and 15s higher on futures.

Tin—Spot tin opened steady at £125 10s, futures at £126 5s, and after sales of 200 tons of spot and 480 tons of futures, closed steady at £125 12s 6d for spot and £126 5s for futures, making price as compared with last week £1 7s 6d higher on spot and £2 on futures.

Lead—The market closed at £14 7s 6d, making price as compared with last week 2s 6d lower.

Spelter—The market closed at £20 5s, making price as compared with last week 15s higher.

TIN PLATE REDUCTIONS.

In discussing U. S. metal market conditions the Iron Trade Review says :—The reductions in prices of sheet products which have become effective, appear to have been dictated by sentiment rather than by a decrease in the cost of production, except as the decline in pig tin has reduced the cost of making tin plate and the decline in spelter has reduced the cost of making galvanized sheets. Certainly as regards black sheets there has been no reduction in the cost of steel to the sheet mill. The Carnegie sheet bar price shows a decline of $2, from $31 to $29, but there is undelivered tonnage which will have to be taken out at $31, and there are stocks of $31 steel at some of the mills. As to steel made by other steel mills, the fact is that scarcely any was sold at $31, the bulk of the sales having been made when the market was $30. Accordingly the reduction in the steel price can hardly be considered to average more than a dollar a ton. The net cost to the sheet or tin plate mill is not reduced, however, if regard be had to scrap, since sheet scrap has declined $8 or $9 a ton at mill, and the sheet and tin plate mills produce on an average about one ton of scrap to every eight tons of steel received.

There has been a feeling throughout the sheet buying trade that a reduction should be made, and the reductions in black sheets, blue annealed sheets, and painted corrugated roofing, are a tribute to that feeling.

With the coated product the case is different. Tin has undergone a remarkable decline, from 49½ cents in the middle of May, 1906, and a secondary high point of 43½ cents in June, 1907, to less than 27 cents in the past week, the lowest price since July, 1904. As usual, opinion is divided as to whether pig tin will advance to-morrow, next week or next month. Among tin plate mills, however, the feeling is decidedly that there will be an advance, as they know that the consumption in tin plate making will be large and they believe the speculative sentiment has been too pessimistic to apprehend this prospect. Spelter had a remarkable decline also, but has already regained part of the decline.

While producers do not expect any great improvement in the demand for sheets at an early date, there is the best reason for expecting a great increase in tin plate demand. This trade stands by itself ; men must eat, and nature has decreed that the crops will spoil if they are not put into the cans on schedule time. Ordinarily the demand against the spring crops is such that the entire capacity of the mills during February and March is insufficient to supply it, and a large part of the mill activity in November and December is for the accumulation of stocks, Jan. 1 usually seeing stocks of about 1,500,000 boxes. This season there has been no accumulation whatever ; the buyers refused to obligate themselves and the mills would not assume such a burden in the circumstances.

A pronounced start towards much greater tin plate production was made this week by the leading interest, which has just about doubled the number of its tin mills in operation. For two months it had operated about 50 tin mills, in five plants. This week it is operating 99. This 99, however, is less than half the average number with which it has started the New Year in the past few years. There is every prospect that additional mills will be started by the leading interest and by the independents.

The fact that most of the canning crops were short last year is favorable to the industry this year. While the production of tin and terne plate in 1906 was 577,562 gross tons, a gain of more than 80,000 tons over the best previous years, the output in 1907 has been estimated at only half a million tons. The drop of some 70,000 tons is almost equalled by the amount of stocks which are usually made up towards the close of the year, thus showing some decrease in the actual consumption, and leaving nothing for the natural annual increase, so that with prospects of a heavier pack this year, and 50,000 to 70,000 tons of stocks not accumulated, as usual, the tin plate outlook is excellent. Unfortunately this is not necessarily a good augury for other branches of the steel trade ; it is a tradition that the tin mills frequently thrive best when other industries suffer.

SMALL LOSS BY FIRE.

The warehouse of E. F. Walter & Co., wholesale dealers in cutlery and hardware specialties, McGill Street, Montreal, was visited by fire on the morning of Sunday, January 12. The fire occurred in one of the lower flats and prompt assistance from the brigade prevented very serious injury being done to their stock, the damage being confined to a small portion of same, and to their fine sample room. With commendable promptitude, Mr. Walter lost no time in completing arrangements for carrying on business as usual. A complete new stock was cabled for within twenty-four hours, and the firm will be in a position to supply their customers with entirely new goods within a short time. The firm asks the forbearance of customers and friends, meantime, and announce that everything will be ready for spring shipping.

SCREEN DOOR SETS.

The Taylor Forbes Co., Guelph, has issued a handy booklet describing the spring hinges and screen door sets manufactured by their company. The Taylor hinges and door sets are strictly high-class and are all made from tested crucible steel wire that is certain to give entire satisfaction. These are seasonable lines required by all dealers and though high priced, the hinges are strictly up-to-date.

The booklet is a very handy one for reference and will be sent to any in the trade on request if this paper is mentioned.

TO WIND UP ROLLING MILLS.

A petition for the winding up of the Toronto and Belleville Rolling Mills, Limited, was filed at Osgoode Hall Thursday, Jan. 16. The petitioners are James P. Scott & Co., of Toronto. The petition sets forth that an assignment for the benefit of creditors was made on December 27. It is alleged that the affairs of the company are very much involved, the total liabilities being $300,000, of which $102,000 are unsecured claims. The assets are not set forth at any particular sum, but it is stated that they are not sufficient to meet the liabilities.

The following statement from the company's books is set forth in the petition: Bond issue, $70,000; interest in arrears, $6,300; cash borrowed to pay wages for which bill of sale given, $6,655; cash advanced by Montreal men, without security, $55,000; Bank of Montreal lien, $146,000; other trade liabilities, $23,000.

The stock of Cleveland pig iron is not increasing with makers; on the contrary, they are still not producing enough to satisfy the demand, and iron is still being taken out of public stores, though not so freely as during the last eighteen months, when the average decrease per month has been about 33,000 tons. The stock of Cleveland pig iron in stores, which was up to 750,000 tons in March last year, has dropped to less than 100,000 tons within the last few days, and is now less than has been noted for nearly three and a half years.

HARDWARE TRADE GOSSIP

Ontario.

W. Quandt, Plattsville, has opened a tinsmith shop at that town.

C. W. Clark, hardware merchant, Burk's Falls, has assigned to D. R. McLean.

Arch. McFarlane, manufacturers' agent, Montreal, was a visitor in Toronto during the week.

Mr. Scott, of Scott & Bennett, plumbers and steamfitters, Galt, was a visitor in Toronto during the week.

The stock and plant of the Ontario Steel Ware Co., Toronto, has been advertised for sale by tender.

Love & Holt, Toronto who have conducted a plumbing shop for some years, have dissolved. Mr. Love will continue the business.

Mr. Leonard, manager of the Crane & Ordway Co., plumbing supplies, Winnipeg, was a visitor in Toronto during the past week.

Newman & Popham, plumbers, Toronto Junction, have assigned. The liabilities amount to $1,000 and the assets to $500.

Mrs. Startup, wife of David Startup, hardware merchant, Toronto, died suddenly this week. Death was due to heart failure.

Paul Ducharme, head clerk in the Moir hardware establishment, Arnprior, has become a benedict, the lady of his choice being Miss Benard, of Ottawa.

The estate of C. M. Cutts & Co., hardware merchants, Toronto Junction, will be sold by tender. The assets of the firm amount to about $10,000, with liabilities of $30,000.

W. W. Cox has retired from the management of Whetman & Barnes, wholesale manufacturers of hardware at St. Catharines. W. J. Elliott has been appointed to succeed Mr. Cox as manager.

J. B. Woodward, Cannington, has leased the store next to R. L. Corlett, the one occupied at one time by Woodward Bros. as a hardware store. He is having it fitted up in modern style with a view to opening out a new and up-to-date hardware stock.

L. Barker, an employe of the Wm. Kennedy & Sons' Foundry, Owen Sound, met with a painful accident last week. In company with several other workmen, he was engaged in molding a casting when it tipped over and struck him on the right leg, causing a compound fracture, and crushing the bone.

Harry Southcott, elected an alderman in St. Catharines a fortnight ago, was not a member of the firm of Coy Bros. & Southcott, as previously announced. F. A. Southcott was formerly a partner, but F. E. Coy is now sole proprietor of the successful hardware business conducted under that firm name.

Valentine Wells, of the Mount Forest Carriage Company, Mount Forest, was tendered a banquet on the occasion of his departure, as one of the Toronto News' prize winners in the recent travelers' competition. Mr. Wells will, in company with the three other successful travelers, make a trip around the world.

Harry F. Moulden, sales manager of the Taylor-Forbes Company, Guelph, returned from Montreal this week, and leaves next week on one of his periodical trips to the Pacific coast. Mr. Moulden speaks very hopefully of the coming year's business, stating that he has not had a better selling trip for a long time than his recent trip to Montreal.

The Canada Stove Company, which was granted a closing-up order this week at Ottawa, has nothing to do with the Canada Stove Works, of Harriston. The former company is comparatively new and adopted a name so similar to that of the Canada Stove Works, that this firm changed its name to the Harriston Stove Co., Limited. Business is being carried on from the same offices at Harriston, Ont.

James Dandie, Streetsville, was one of the hardwaremen recently re-elected to the municipal council of his town. He was returned by acclamation after successful year's work in erecting a large concrete power dam, 195 feet long, having a 10 foot head and developing 100 horsepower. A power house has also been constructed and a municipal lighting plant will be in operation in February, 65 horsepower being left for sale to manufacturers.

E. B. Brittain, special traveling representative of the Pacific Hardware & Steel Company, San Francisco, returned home this week after a fortnight's visit with his brother, C. J. Brittain, manager of the Toronto branch of the Canadian Fairbanks Company. Mr. Brittain was formerly with the James Morrison Brass Mfg. Co., leaving Toronto about six years ago and joining the staff of the Robertson-Godson Co., Vancouver, but four years ago removed to San Francisco, to accept the position he now holds. The Pacific Hardware Company is understood to be the third largest jobbing concern in the United States.

Quebec.

A. M. Johnston, of the Reed Manufacturing Co., Erie, Pa., is in Montreal.

R. & H. East, hardware merchants, Montreal, have dissolved partnership.

George Henderson, jr., of Brandram-Henderson, paint manufacturers, Halifax, is in Montreal visiting the office there.

W. H. Graham, representing John H. Graham & Co., manufacturers' agents, New York, has been visiting Montreal hardware trade circles.

The hardware firm of Kerr & Foss, Sherbrooke, Que., has been dissolved owing to the failure of the health of Mr. Foss. J. F. Kerr will continue the business.

The Safety Explosive Co., of Montreal, has been placed in liquidation on the order of an American firm. The liabilities of the company are estimated at $76,000.

L. H. Hebert & Co. have been recently incorporated as L. H. Hebert, Limited, wholesale hardware dealers, Montreal. L. H. Hebert is president, and A. Jeannotte, managing director.

Col. R. Starke and officers of the 30th Victoria Rifles held a very pleasant at-home at their armory on the night of the 17th inst. Col. Starke is a member of the firm of Starke-Seybold Co., Montreal.

In the Montreal Manufacturers' Hockey League matches this week, Montreal Rolling Mills drew with C.P.R., 1-1; Northern Electric beat Montreal Packing Company, 5-3, and the Canadian Rubber Company defeated the champions, the Montreal Steel Works, by 3.-1.

The J. C. McLaren Belting Co., Montreal, have held their annual convention of travelers, the whole territory from Halifax to Vancouver, being represented. Last year's business was discussed, and the policy for the coming months outlined. The daily meetings were wound up with the customary banquet ath the Place Viger Hotel, Montreal, at which the heads of the various departments of the firm, as well as the travelers, were present. F. A. Johnson, general manager of the company, presided in the absence through illness of the president. The chairman, in responding to the toast of the firm, expressed himself well satisfied with large advances made during the past year, and notwithstanding all the recent talk of financial stringency, had every faith in an equal, if not a greater increase, being made in the present year.

Western Canada.

The firm of Adams & Mann, plumbers, Winnipeg, has been dissolved.

McNamee & Argue, hardware merchants, Crystal City, Man., have sold their business to J. J. Williams.

J. H. McNeil, formerly with the Batty Hardware Co., Norwich, is now manager of a branch of T. R. Stuart & Co.'s hardware business, recently opened in Calgary.

McLennan, McFeely & Co., New Westminster, are busy moving their wholesale hardware establishment from the premises they have occupied to the large new block they have erected. This building probably covers a larger area than any other wholesale building in the city.

W. P. Miller, of Brockville, and his son, R. F. Miller, Edmonton, have purchased the hardware business of McFarlane & Northcott, Calgary. The firm changed hands this week and the name was changed to the W. P. Miller Hardware and Heating Company. The new firm will add heating and plumbing to its present business. W. P. Miller was formerly manager of the James Stuart Manufacturing Co., Limited, Brockville. Catalogues from eastern manufacturers and jobbers are solicited.

Quebec and Maritime Provinces

Ross Rifle Company's Troubles With Government—Opinions of St. John Manufacturers on 1908 Outlook—Gen eral Feeling That Coming Year Will be a Good One—May Shorten Ter ms of Credit—New Record Made at Sydney Blast Furnaces.

HALIFAX.

Halifax, Jan. 13.—The hardware markets are fluctuating so that dealers are somewhat reticient about quoting prices, particularly on metals and paints. Some of the firms' travelers now on the road have been heard from and the jobbers say that the outlook is very promising. Nova Scotia, they say, stands in a much better position as regards trade, than many other sections in Canada. Collections are considered fair, and the spring trade gives no indication of any falling off, though it is a little too early yet to make any predictions.

* * *

The Association prices quoted here are as follows: Oil, raw, 62 cents; oil, boiled, 65 cents; five cents per gallon less for cask lots. The price of turpentine is very unsteady. On Saturday it was quoted at 70 cents, while to-day it jumped to eighty cents. Zinc and sheet lead is worth $6 for full rolls. Sheet zinc is worth $6.75 in cask lots. Zinc spelter 6¼c. Black sheet iron (base) 22x24 guage, is worth $2.50. Barbed wire is $2.90, and plain wire fencing $3.25. White lead is unsteady. The price of Anchor brand, $7.50 pure, $7 decorative, and No. 1 $6.50. Brandrams, pure, is worth $7.50.

* * *

Fire last week gutted the building and damaged the stock of the electrical firm of John Starr, Son & Co., on Granville street. The firm is one of the largest dealers in electrical goods in the city, and their loss will be heavy. There was nearly $15,000 insurance on the stock, and $400 on the office furniture and fittings. The firm did not own the building.

* * *

The revival predicted in the gold mining industry in this Province some time ago appears to be coming true. The Rawdon Mine is now being developed by Messrs. Wood & Hilden, and it is stated that work will soon be started on other properties.

* * *

F. E. Bayer, head of the plumbing firm of Bayer & Co., Sydney, was recently waited on by his employes, and presented with a handsome Morris chair and a well-worded address. Mr. Bayer was unprepared for this handsome testimonial of the regard in which he is held by his employes, but he replied warmly, thanking the donors for their useful gift.

* * *

The Dominion Iron & Steel Company, Sydney, which near the close of the year succeeded in making a new record in connection with its blast furnace operations, now announces that it has done even better at the beginning of 1908. This was accomplished in the first week of the new year, when in one day the output of the four furnaces totalled 1,027, for twenty-four hours' continuous operation. This is about twenty-five tons better than the previous record.

ST. JOHN.

St. John, N.B., Jan. 14.—Merchants in all lines of business unite in saying that 1907 was a banner year and now that stocktaking is about over, the thoughts of the dealers turn to a consideration of what 1908 will bring forth. Though it is a rather slack time at present and the usual dullness of this season of the year is being felt in the hardware trade, the storekeepers and manufacturers are looking forward optimistically to a good steady trade.

It is admitted that money is a little tight and that the first few months may show a falling off from last year, but the quietness is not expected to last for any great period and the feeling seems to be that matters will quickly re-adjust themselves so that there will be a return to good, healthy business.

The majority of the dealers who have been approached say that it is rather early in the year to forecast the business outlook, but in no case was there any expression to indicate that a serious slump would develop.

Paint manufacturers state that business is rather quiet at present and there is likely to be little doing until stocktaking is concluded, except some small sales for assorting. As far as can be learned at present the outlook for 1908 is considered good. Manufacturers of stove and hardware incline to the belief that there will be little change from present conditions until spring. The buying for the next few months is likely to be small, and few large orders are anticipated until the spring business commences.

* * *

The axe and edge tool manufacturers state that business in these lines is dull but they are looking forward to the usual amount of business, which generally opens up about the middle of February. The bulk of axes are bought in the spring and autumn months, and as the stocks were light last year and the lumber output this winter will only be about half the usual amount, it is confidently expected that the present year will be fully up to the mark in sales of these goods.

These manufacturers report that they are busy now on orders for steel springs and tools, and they see no reason why their business should not be as good as last year.

There has been a slight falling off with the western trade, but this is regarded as only temporary as it is pointed out that with the rapid growth of the west business there must of necessity increase

While several of the manufacturing concerns have shortened their hours and curtailed their output somewhat and will continue in this way for a few months, the majority are working away on full time and report business very satisfactory.

* * *

M. F. Irwin, manager of the McClary Manufacturing Co.'s St. John branch, said the past year had been the most successful they had ever had in this territory. "Collections have been very good," said Mr. Irwin, "and I mean 'very' good. Paper has been promptly met and I see no reason why we should exhibit any alarm.

It is naturally a little quiet just now and I don't look for much change before spring. There will be the regular buying, of course, but I think business will move along in a very satisfactory way. We expect to do a good big business in 1908."

Other dealers spoke along the same lines and all appear confident of the solidity of business conditions for the future.

* * *

The St. John Iron and Hardware Association held their annual meeting on Monday, January 6, and elected the following officers for the present year:

President—W. S. Fisher.

Vice-President—M. F. Irwin.

Secretary-treasurer—Fred C. Owens.

Directors—W. H. Thorne, Thomas McAvity and M. E. Agar.

There was some discussion on the proposal to shorten the time of credit from 60 to 30 days and also to change the discount period from 2 per cent. off 10 days to 2 per cent. off 20 days. Action was deferred.

There was some talk about changes in prices, but the lists are not yet available. It is probable that a picnic will be held by the association during the coming summer.

* * *

At a meeting of the St. John Board of Trade, held on January 7, J. H. McRobbie, who was elected president at the annual meeting in December, while absent from the city, resigned for business and personal reasons. The resignation was accepted, but the election of a successor was deferred until the February meeting. It was decided that the members of the board should hold a banquet in the near future.

The council of the board reported that it was in receipt of a communication from a gentleman in Havana, stating that it is proposed to start a steamship line from Boston to Havana, and suggesting that St. John might be included in the itinerary. As he expects to be in Halifax soon, the council has invited him to come to St. John and talk the matter over with merchants here.

* * *

The question of rebuilding the suspension bridge over the St. John Falls was discussed by the government last week. It was decided to have plans prepared for a suspension bridge, a cantilever bridge and an arch bridge, together with an estimate of the cost of each, and adopt whichever was believed to be the most suitable.

NEWCASTLE, N B.

Newcastle, N.B., Jan. 14.—The Ottawa authorities have agreed to pay the Sunball Co., of Chatham, $19,000 to settle the suit, which was the outcome of the government's expropriating land for a deep water terminal for the I.C. R.

* * *

The antimony deposits at Lake George in York Co., are attracting attention and New York parties are showing interest in them, their representative, Mr. Baker, having interviewed Surveyor-General Sweeney in the matter.

* * *

J. & T. Jardine, of Rexton, have sold their sawmill and lumber lands to A. J. Curran, of West Branch, Kent Co., and Frank Curran, of Bathurst.

* * *

The Miramichi Lumber Co. in which the International Paper Co. holds the controlling interest, has been given permission to increase its capital stock from $400,000 to $800,000. and has actually increased it to $600,000.

* * *

The W. S. Loggie Co., Chatham, is building a new coasting steamer. She will be 60 feet keel, 75 feet over all, 20 feet beam, and 8 feet deep. She will carry supplies to the canning factories on the coast.

QUEBEC CITY.

Quebec, Jan. 15.—Col. Wurtele appeared before the Public Accounts' Committee at Ottawa to-day to give evidence in connection with a payment of $284,722.85 to the Ross Rifle Co., in the last fiscal year. Wallace Nesbitt, K.C., appeared in the interests of the company.

Mr. Nesbitt took up the examination, saying that the interests of the company were not necessarily the same as the Government's. His appointment by the Government last year as inspector was a yielding on the part of the Ross Company to a check that the Government had no right to demand under the contract. Ross had always bought for cash to get the best possible terms.

A little tiff occurred when Mr. Bristol objected to Nesbitt's questions as being too leading on points that might be controversial. The counsel not witness, was giving the evidence. It was decided to give wide latitude to counsel in order to get at the full facts.

Witness said that the Government had advanced altogether $1,186 776; thirty-three thousand rifles had been accepted by the Government. Two thousand more were waiting for inspection, 2,500 to 3,000 were complete in the factory, and the balance of the contract were ready to put together. Nine hundred thousand had been paid in wages and three hundred thousand in materials and expenses, consequently the company had spent over $100,000 more than the total amount advanced by the Government.

Mr. Nesbitt made a statement, saying that he had more to do with securing the contract than had Sir Ross himself. He did it out of personal friendship to Sir Charles, who had been the victim of circumstances, which had made him greatly misunderstood. He had invested over $1,250,000 in the plant, then came the delays, as a result of the differing views of the various experts. In the angel Gabriel had to deal with rifle experts, he would merely quit his job. Over 80 district changes had been made, which had involved a practical reorganization of the machinery. Rifle experts had expressed the opinion that the progress of the company under the circumstances had been perfectly marvellous. Apart from the vast expenditure on the plant Sir Charles Ross was at present $100,000 out of pocket. But from some quarters the dictum had gone abroad that the factory must be closed and moved from Quebec. He acquitted the head of the Militia Department. The company had been entitled to a fresh order in September last, but it had not come. Unless it did so, the factory would have to close in the spring.

Mr. Nesbitt said one of the agents of the company's trade rivals had called on him last fall and told him it was time for them to get out of business. They would get no further orders, and they must move from Quebec, as the inspection on further orders would be so rigid that we could not deliver rifles. He said that one of the English companies was ready to buy us out. The threat was laughed at. If it had not been for the changes and interference the rifles would have all been delivered and the company would now be making arms for other colonies.

Hon. Hr. Borden said in defence of the department that the company had co-operated with the Government in making the changes. He was anxious for an investigation into the charges made by Mr. Nesbitt.

On motion of Mr. Northrup, Col. Pinaud, and Major Cotton will be called before the committee and the Nesbitt charges fully gone into.

Reported by Ontario Correspondents

Death of Hamilton Manufacturer—Business Prospects Brightening — Ruinous Price-Cutting Being Indulged in at London — Central Heating Plant Proposed at Kingston.

KINGSTON.

Kingston, Jan. 15.—The past week has been rather quiet in hardware circles. Reductions are being offered on most lines by a number of the merchants, and the chief business being done at present is in seasonable goods. There has been a greater demand for skates and hockey sticks this year than usual, as many more seem to be going in for this kind of winter amusement than in previous years.

PERCY B. CHOWN.

Elected to the Kingston Board of Education in the Recent Municipal Elections.

* * *

The formal opening of Queens' new medical laboratories took place on Tuesday, when many prominent speakers from outside points were present. The new building is a splendid four-storey stone structure, and is heated throughout by steam and lighted by electricity. In the basement the most conspicuous piece of apparatus is a large ventilating machine of the very latest design, manufactured and installed by the Buffalo Forge Company. The building is heated with steam, which is conducted by pipes from the engineering building. It is probable that a cement floor will be laid shortly.

* * *

The city engineer's department is at present busy preparing the specifications for the concrete walks to be built this year. The engineer says that probably about five miles of walks will be constructed, or nearly as much as in 1907. The work will be commenced earlier than last year, and will probably be completed in October.

* * *

The question of a new summer hotel for Kingston has again been revived. The various merchants have spoken several times about building a new summer hotel, convenient to the water front, which they believe would bring more visitors to the city, and naturally increase the trade during the summer months.

* * *

An effort is being made to form a company here to take up the question of heating buildings by steam from a

central plant. The city council may also be asked to consider the matter. It has been reported that Sarnia and Berlin have piping laid in their streets for the purpose of supplying houses and stores with steam heating and the plan might also be followed here.

* * *

The Retail Merchants' Association, (about 57 members in all), of which A. Mitchell, hardware merchant, is secretary, had a motion passed through the city council about two years ago, in which to force all peddlers to take out a license. The fees were as follows: That $100 should be charged to any peddler with horse and wagon; $50 for any person with a hand-cart; and $25 for persons peddling with grip or pack from door to door. At first a number of the peddlers refused to take out the necessary license and as a result the association immediately had two or three of them arrested, one peddling shirts, etc., another with a wrench and other handy tools, and in each case a fine of $50 was imposed; they also had others put out of the city altogether. It has proved very satisfactory here, as peddlers of any kind are not to be found around our city now.

HAMILTON.

Hamilton, Jan. 15.—E. T. Wright, founder of the lantern and tinware company which bore his name, died at his residence, 24 North Victoria avenue, on Tuesday of this week, after an illness of five years, he being told two years ago that he could not live more than twenty-four hours. He was 55 years of age, and was a brother of Ald. H. G. Wright, who, perhaps, was better known to the trade than the deceased. Mr. Wright was born in Bethany, Pa., but had lived in Hamilton ever since he was a few years old. He established the E. T.

LATE E. T. WRIGHT, HAMILTON.

Wright Company twenty-five years ago and it was owing to his far-sighted business policy it became known all over Canada. Of late years the business had enjoyed great prosperity and the deceased had numerous plans for future extension.

Another prominent manufacturer, E. A. Dalley, died on Monday. He was vice-president of the F. F. Dalley Company, manufacturing chemists. He was better known to the outside trade as a member of the Commercial Travelers' Association, of which he was a member for many years, having been president of the local branch at one time.

* * *

The capital of the Hamilton Steel & Iron Company has been increased from $1,513,600 to $5,000,000. This company was organized in 1894, and it is now one of the largest steel plants in the country, having an output of about 500 tons a day. At one time the prospects of the concern were not quite so rosy as they are to-day, but the rapid development has warranted the increase in the stock and as a result those who risked their money in the early stages of the company's existence will now be well rewarded. The company has been reorganized and each shareholder will get three shares for every one held formerly. The directors of the concern are: C. S. Wilcox, president; Robert

ALD. HUGH C. SWEENEY,

Stove Dealer, Hamilton, Re-elected Alderman of that City for 1908.

Hobson, vice-president; Wm. Southam, John Milne, A. E. Carpenter and C. E. Doolittle.

* * *

There is little activity in the hardware trade just now. Local retailers report a light but steady trade, which is comparatively good for this season of the year.

* * *

The plumbers are being kept fairly busy on small work and they are all looking forward for spring contracts. There will be a number of big jobs on the market at that time for which the competition will be keen.

LONDON.

London, Jan. 14.—Seasonable quiet now prevails in the retail hardware trade. Those who have taken stock are well satisfied with the results of the past year and are looking forward to a lively spring trade.

The need of organization among the retail hardware dealers becomes more manifest every day and anything that can be done to stop the ruinous price-cutting that is now quite common should be resorted to without delay. Said one merchant to-day: "Let me give you an instance of this price-cut-

ALD. NORMAN J. CLARK,

Master Plumber, Hamilton, Re-elected Alderman of that City for 1908.

ting. A certain dealer is selling turpentine for seventy-three cents a gallon by the gallon, while the wholesale price to-day is seventy-two cents per gallon, when bought by the barrel. Something should be done, and done quickly to bring the hardwaremen of London to their senses. I would favor bringing an expert organizer here, at the expense of the local dealers, and the forming of an association that will hold. That is the only way by which business-like methods of doing business can be made general. I for one would be willing to go down in my pockets and pay a share of the cost of organization, and I believe it would be money well spent."

* * *

The hardware trade here is interested in the game of hockey outside the selling of skates, sticks and pucks. A league has been formed, in which both the wholesale and retail sides are represented by teams, as follows: Wholesalers, the Hobbs and Howden firms; retailers, Cowan & Company, and the Pandour-Gillespie Company. Last night the Hobbs and Cowan teams played an exciting game, the latter winning by a score of 3 to 2.

* * *

A. E. Welch, who is promoting an electric railway between this city and Stratford, is much pleased with the prospect of securing Niagara power. He is of the opinion that it will have the effect of creating many radial lines out of London, that before long we will have trolley railways operating in all directions. He also thinks the steam roads will be found adopting the trolleys as feeders and to handle local traffic for them, as is being done in the state of New York. Mr. Welch expects

that the proposed railway between London and Stratford will be in operation within eighteen months. "There is no good reason," he says, "why we should not have the line working as soon as we are able to obtain Niagara power for its operation. For one thing we will not have to build a power station, as we had to do on the Southwestern Traction line, of which I was promoter."

* * *

What may be taken as pretty good evidence of the stability of the local hardware trade is the fact that while in other lines of business, such as boots and shoes, gents' furnishings, etc., there have been special sacrifice sales, both before and since the Christmas holidays, in hardware no such thing has been attempted. Evidently the hardwaremen are satisfied with the business outlook. As one of them remarked today, "it is far better to spend a little extra money in advertising than to lose more in slaughter sales."

CHATHAM.

Chatham, Jan. 14.—Business is keeping up remarkably well, some hardwaremen reporting it almost 50 per cent. ahead of this time last year. Plumbing, tinsmithing and other work, while not extra brisk, is still quite satisfactory, all things considered. Money is considerably freer than merchants had anticipated, and the prospect is bright for a good year ahead.

* * *

That with the commencement of the new year prosperity is beginning to resume her accustomed sway, is the gist of an extended article in the Chatham News last week. The article gives a canvass of a large number of Maple City industries, which goes to show that, after the December slack season, the factories are resuming operations much as usual, and that the outlook for 1908 is good.

* * *

Thos. Beattie, the Comber hardwareman, is conducting an extensive stock-taking sale.

* * *

J. S. Richardson, the well-known Tilbury general merchant, is the new reeve of that village. A noteworthy feature of his election was that there was no opposition, his predecessor, W. C. Crawford, a business rival, being one of his nominators.

* * *

Justice Little, formerly of Wallaceburg, has moved to Tupperville, where he is embarking in a general merchandise business in conjunction with a brother-in-law.

* * *

Thos. Vickerman has made an offer for the Tilbury electric light plant, and it is quite likely that a deal will be put through and the plant will be in operation at an early date. Should the purchase be effected, Mr. Vickerman intends remodeling the plant and making the service thoroughly up to date.

At the inaugural meeting of the new City Council on Monday morning, Ald. W. H. Westman was elected to the chairmanship of the Industrial Committee, which he occupied with distinction during 1907. Ald. Westman is a hustler, and no better man could be found for the post. He is also a member of the Finance Committee this year. Ald. Westman is in line for the Mayoralty for 1908, though there are other probable aspirants.

BARRIE.

Barrie, Jan. 12.—The writer is glad to see correspondence from Barrie in Hardware and Metal under "Reports by Ontario Correspondents," of January 11. He has wondered why our town here wasn't reported on before. We are not all dead yet. We are looking forward to great improvements in our town this year, improvements of such a nature that will bring Barrie very much to the front. The G. T. Ry. is just commencing operations whereby we expect to have one of the prettiest and most convenient stations north of Toronto. Then very shortly we expect to see established most modern car and repair shops, blacksmith and machine shops covering a very large area of land and employing a large number of hands. Barrie is also to have another industry, the Aerial Ladder Company, guaranteeing not to employ less than thirty hands.

Building operations will boom in Barrie for a couple of years. Farmers in this vicinity have not been hit very hard and the writer sees no reason why we should be pessimistic in Barrie.

The mild weather, no doubt, has been unfavorable to the dry goods men, clothiers and furriers, and just at present the hardware trade is a little quiet, but it is generally expected so at this season of the year.

* * *

The year 1907 was the best stove year H. H. Otton & Son have ever had, the business for the whole year having increased over previous years. Yet their Xmas or holiday trade was not up to 1906. December of 1906 was extra good and had December of 1907 been as good there would have been an increase to have been proud of.

* * *

I hope that these few lines will be the means of encouraging someone else who is more able to write for trade journals than the writer, in having the name "Barrie" at the head of one of the columns of reports by Ontario correspondents.

West of the Great Lakes

Saskatoon Store's Prize Drawing—Merchants Hold Optimistic View of 1908 Prospects—Calgary Hardwaremen Play Ball in January—Preparations for Dominion Exhibition to be Held in Calgary Next Summer—Mild Winter Easy on Fuel.

SASKATOON.

Saskatoon, Jan. 10.—Yesterday the warehouse of R. J. Armstrong was completely destroyed by fire. The loss is estimated at $21,000, and is covered by insurance. The stock consisted of carriages, cutters, farm implements and furniture.

* * *

Christmas trade at Asquith, to use a common expression, was "a hummer," the merchants having a busy time of it. Those who settled there early and awaited developments are now reaping the harvest which they anticipated. Now that the railway is connected up with the east, the farmers pour in there with their grain for many miles around. On shipping their wheat they usually load up their wagons again with the necessary supplies bought at the stores. In this way merchants are kept going even at this dull time of the year.

* * *

On December 31 the semi-annual drawing took place at J. F. Cairns' store. For the last two months of the year a coupon was given with every dollar's worth of goods purchased. A duplicate coupon was placed in a large wooden box, and on Tuesday evening it was opened. Three prominent citizens were placed in charge of the drawing. The coupons were emptied out of the box into a large iron tub and thoroughly mixed. A little boy then drew out ten, one for each of the prizes offered. The following were the prizes: First, team of horses; 2nd, silver tea set; 3rd, lady's costume; 4th, suit or overcoat; 5th $20 worth of groceries; 6th, dinner set or rug; 7th, pair of shoes; 8th, Stetson hat; 9th, hockey outfit; 10th, doll's outfit.

The drawing took place in the presence of a large number of people, and any one receiving a prize for which they have no use, is at liberty to exchange it for other goods at the store. That this scheme brings customers was evident from the quantity of coupons which had to be handled. This firm is expanding year by year and is one of the most progressive in the west. A full-page ad. is carried in the local papers and an experienced ad.-writer employed. The windows receive the attention of an expert trimmer about every four days.

* * *

Last year about this time there was a great scarcity of fuel throughout the west. This winter is a contrast in that respect. Ample preparations were made as regards coal and wood and so far the weather has been anything but severe. It has been a fuel saving winter, and this reminds the writer of the traveler who was placing a certain make of stove on the market. After talking up the good points of the stove in question to the storekeeper, he finished up by saying, "My dear sir, if you buy this stove you will save half your fuel." The merchant with a knowing smile, replied, "All right, send me two and then I'll save it all."

* * *

Notwithstanding the many disappointments of last year, a review of the re-

tail trade of the city proves that a greater volume of business was transacted than in 1906. The increase came in the face of growing competition, both in the city and at outlying points. The merchants anticipated the demands of a growing country and increased their stocks accordingly. The building of railways enlarges the vast area of which Saskatoon is the commercial centre. Although smaller stores will be established at points along the railroads, Saskatoon will be recognized as the place where a full line of goods can be bought. The past year has had its ups and downs. The spring shopping was demoralized because of the freight blockade in the early part of the year. Goods which should have been on the shelves were still lying in cars somewhere along the line and could not be located. In the fall again, the late harvest and marketing of the crops shortened the season for the merchant, but there is a feeling of satisfaction all round and prospects are brighter for the coming year.

* * *

There is very little activity in hardware circles this week. Owing to the mild nature of the weather and the lack of snow there is no demand for sleighbells, snow shovels and goods of this nature. No travelers are calling these days. Most of them may be seen around Winnipeg, where they have been spending the holidays, preparing their samples for the first journey of the year. Stock-taking is the general order of the day. Hardwaremen may buy more cautiously this spring, but that they will buy is certain. The past year may not have come up to their expectations in every respect, but every merchant is sure that better times are ahead. Every citizen of the west has the same feeling regarding the country, it is bound to grow. In this respect merchants have a keen foresight, backed up by experience gained in past years. The financial cloud may hang heavy just now, but soon it will disperse and leave the atmosphere clearer than before. Merchants interviewed by your correspondent are in no way disheartened,; on the contrary, they expressed the opinion that business in the coming year would be good. They have no fear for the future. There is railway development going on all round which means that there will be activity along other lines of industry. Every year sees some new undertakings carried out, and the coming year will bring its share. Another important phase was touched on by a hardwareman, namely, the crop question. A great deal of grain has been marketed from this district for which there has been as yet no returns. This means that the farmer has not yet been paid for last year's labor, but he may look for it during the next month or two. This will put some money in circulation in the early part of the year when the machinery will be set running as smoothly as before. A considerable quantity of wheat has yet to be shipped by the farmers, and with the advancement of prices within the last few days, prospects are good all round.

* * *

At the first meeting of the city council for this year the telephone question was discussed at some length. A by-law was in course of preparation to give the city power to buy out the telephone company at the end of the present year. This the company now object to and the matter has not as yet been satisfactorily settled. Alderman Hopkins suggested that a permanent railway committee be included in the list of committees for the present year. A railway, transportation and publicity committee was accordingly formed to carry on negotiations between the different railway representatives and civic officials. That such a committee is necessary is apparent, seeing to what extent the railway operations affect the affairs of the city.

* * *

The following resolution from the Board of Trade was wired to the Railway Commission in Winnipeg regarding freight rates : "That whereas the Railway Commission and the railways have decided on a new freight schedule for western Canada, which abolishes the former jobbers' rates ;

And whereas the new schedule has as its basis of charges the mileage of the road ;

Resolved that this council of Saskatoon Board of Trade expresses its unanimous approval of the new schedule as being correct in principle and fair towards all, and desires that it be put into force as first decided on and that a copy of this resolution be wired to the chairman of the Railway Commission at Winnipeg to-day."

CALGARY.

Calgary, Jan. 13.—The wholesalers' report for this week is excellent. Calgary is the biggest distributing point in the west and feels the rise and fall in business quickly. Business in the southern half of Alberta is very good, much better than during the same month last year, and, in the northern half, it keeps up well.

* * *

Trade during the past month, including, of course, Christmas week, was better, according to the reports given by the merchants themselves, by twenty per cent., than during the same period of last year. The actual individual purchases were not so heavy, but the number of customers was much larger, and there was much more cash.

* * *

Owing to the continued mild weather, and it is certainly a real Alberta winter, with week after week of glorious sunny days and bright nights, and not enough frost to freeze ice, hockey has been rather out of sight. However, some enterprising hardwaremen from the firm of Linton & Hall challenged a team of the Hudson's Bay Company to a swift game on the ice, and the result was a win for the hardwaremen. And now the winners have received a challenge to play a fierce but friendly game next week with another well-known hardware bunch of hockeyists from McBride & Company.

* * *

Plans are being rapidly prepared for the new buildings to be erected for the Dominion Fair, to be held in Calgary this summer. Alderman Suitor is busy all the time in Secretary Richardson's office, and the accommodation for exhibits and exhibitors promises to be on a grand scale.

Building operations on the new C.P.R. station, the Lineham block, and several other important buildings, is in full swing, as they have been during the whole winter.

* * *

The baseball match played on Jan. 1, in the presence of some two thousand spectators, was such a great success that a return match has been arranged for the first of February.

* * *

Easterners who have come to the west recently are now learning that it is a risky business to buy large quantities of beef and poultry in the fall; and it is no uncommon sight to see roasts of meat and chickens hanging on the clothes-line in the moonlight, in the hope that there will be sufficient frost to freeze them.

* * *

One drawback to the beautiful weather is that there is no sleighing. Snow has long since disappeared, and sleighbells are only a memory.

PRINCE ALBERT.

Prince Albert, Jan. 9.—Looking back over the past year, it can be said that this city has seen wonderful development. Not only is this evident as far as the erection of buildings is concerned, but in the manner and spirit of the citizens. The enterprising younger element have branched out on all sides, opening up new stores and new businesses. Already there is a number of new buildings in sight for the coming season, and the list will grow longer as the year advances. The much talked of bridge, too, will be a much needed article in the right place, and will enable farmers to the west and north to bring in their grain and other produce without depending on the ferryman. The plans of the C. N. R. bridge have arrived at the city hall. There will be two roadways, each ten feet wide on either side of the railroad track. The level of the railroad is to be about eight feet above River street, but it is thought that the latter will be graded up to that level.

* * *

The Early Closing By-law came into force in Hanley at the first of the year, and stores now close at six-thirty.

CARE OF TILE FLOORS.

By Charles James Fox, Ph.D.

To clean a stained tile floor it should be scrubbed with clean soap suds and lye. Sufficient lye should be added to the water to make it strong enough to attack the dirt, but not so strong as to injure the fibre of the scrubbing brush. In order to avoid injury from the lye the workman should protect his hands by a pair of rubber gloves. After the soap suds have been wiped off the floor, it should be sprinkled with fine sand and rubbed with a soft pine board, renewing the sand from time to time. It may be necessary to give the floor a second scrubbing with soap suds and lye after it has been treated with sand.

Ink spots and many other stains can-

not be removed in this manner. They must be gotten rid of by being treated with a dilute solution of ordinary muriatic acid, rather stronger than is ordinarily used for removing cement from the surface of the tile after they have been set. This strong acid should not remain on the floor too long, because, although it has no effect upon the clay tile, it is very injurious to the cement jointing. If the stains resist this treatment, the floor should be wiped off with clean water and chlorinated lime or bleaching powder should be sprinkled upon the stains. The powder should be moistened with a little water and then rubbed into the tile. Diluted muriatic acid should then be sprinkled upon the bleaching powder and water, rubbing the mixture well into the tile with a small wet rag and keeping the hands protected with rubber gloves. The operator should avoid, as much as possible, breathing in the strong chlorine gas which is given off by this moisture. Then wipe up with clear water.

All tiled floors, except those composed entirely of vitreous tile, should be coated on the surface with a material that will prevent dirt from being ground into them. After the floor has been thoroughly cleaned and allowed to dry, it should be coated with a preparation composed of half a pound of yellow beeswax and half a pound of paraffine, dissolved at a low heat in one gallon of turpentine. This must be done over a slow fire, as the turpentine takes fire if it becomes too hot. When cool, the mixture should form a thin, oily liquid. It should be applied to the floor with a soft rag or with a brush, rubbing it into the tiles as long as they will absorb it. After the tiles become glossy wipe off what excess remains on the surface. This treatment will leave the tile floor bright and will prevent dirt being ground into the tiles. As this substance is of an oily nature, it cannot be applied to a floor which has been cleaned until the same has been thoroughly dried out, which takes several days.

If the floor cannot be protected and allowed to dry thoroughly without soiling, it is better to give it a surface treatment with a solution of silicate of soda or water glass, which can be obtained at any wholesale druggist's. This can be thinned with water so that it can be readily applied with a brush, and as it is a water soluble substance, it can of course be used on the floor before the latter is absolutely dry. It is best, however, to let the floor dry a little before applying it.

A New York chemist has manufactured a cream wax with which to coat tile floors. This wax adds greatly to the appearance of the floor and will prevent the grinding in of dust or dirt and will facilitate the washing. It is applied with a mop or a pad of soft cloth, and well rubbed in, as the greater the friction the better the effect. New tiled floors should be cleaned with muriatic acid, as is customary. When the excess of acid is washed off the still moist floor should have the diluted wax applied as above. Old tile floors should be thoroughly scoured with sand brush and hot water, or as described at first, and made thoroughly clean before applying the dissolved wax. This cream wax is an aqueous mixture and can be applied to a floor that is not entirely dried. Hence its advantages over beeswax.

CONDENSED OR "WANT" ADVERTISEMENTS.

RATES.

Two cents per word first insertion; one cent per word subsequent insertions.

Five cents additional each insertion where box number is desired.

Contractions count as one word, but five figures (as $1,000) are allowed as one word.

Cash remittances to cover cost **must** accompany all advertisements. **In no case** can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

RULES FOR COPY.

In addressing replies care of HARDWARE AND METAL don't fail to give box number.

Replies addressed to HARDWARE AND METAL boxes are re-mailed to advertisers every Monday, Wednesday and Friday.

Requests for classification will be followed where they do not conflict with established classified rules.

Orders should always clearly specify the number of times the advertisement is to run.

All "Want" advertisements are payable in advance.

AGENTS WANTED.

This is the problem of many manufacturers who are anxious to get a foothold in Western Canada. It will be easily solved if HARDWARE AND METAL is given the opportunity to solve it.

AGENT wanted to push an advertised line of Welsh tinplates; write at first to "B.B.," care HARDWARE AND METAL, 88 Fleet St., E.C., London, Eng. [tf]

A SOLINGEN manufacturer of pocket cutlery razors and scissors is open to appoint an agent for the sale of his goods in Canada; his present agent is retiring from business. This is a good opportunity for a young man with a small capital to make money, as the cutlery has a large sale with the best retail trade. It is necessary to carry a stock of about $3,000. Apply to Box A, HARDWARE AND METAL, Montreal.

TILES—Plain enamelled, decorated majolica, ornamental, rough surface, and many other kinds, suitable for walls, hearths, furniture backs, dadoes, radiator recesses, etc. Messrs. J. H. Barrett & Co., Ltd., Stoke-on-Trent, England, are open to appoint agents in Toronto, Montreal, Winnipeg, Ottawa, Hamilton, London, Ont. [5]

AGENCY WANTED.

WANTED—Sole agency for high class line of hot air furnaces by reliable hardware firm at Calgary, Alta. Address Box 678, HARDWARE AND METAL, Toronto. (tf)

BUSINESSES FOR SALE.

Somewhere in Canada is a man who is looking for just such a proposition as you have to offer. Our "For Sale" department brings together buyer and seller, and enables them to do business although they may be thousands of miles apart.

HARDWARE and Stove Business; stock $1,500, fixtures $200, at 65c. on the dollar; established 1892; must be sold. J. D. Murdoch & Co., Simcoe, Ont. [2]

ESTABLISHED, growing, paying business — furnaces, stoves, kitchen goods, etc.—in live city; good stand; long lease; low rental. A fine opportunity. Owner has other interests. Box 682, HARDWARE AND METAL, Toronto. (3)

ARTICLES WANTED.

If you cannot afford to buy a new counter, show case, screw cabinet, store ladder, or some other fixture which you could use to advantage, try a "Want Ad." under "Articles Wanted," and you may get what you want at a bargain price.

WANTED — Second-hand revolving screw case for retail counter. Kindly write giving description and price to The Hobbs Hardware Co., Ltd., London. (51)

ARTICLES FOR SALE.

Don't keep any fixtures or tools around your store for which you have no further use. They are worth more to-day than they will a year hence. Don't keep money tied up which you could use to secure discounts from your wholesaler.

FOR SALE—Stock of cut nails, sizes 60D to 3D; no 40D or 4D in stock; stock in first class order; price $2 base, F.O.B. Paisley. A. Sinclair Estate, Paisley, Ont. [5]

FOR SALE—Set of tinsmith's tools worth $300 for $150; $90 Taylor safe for $60; 100 gallon Bowser oil tank for $25. All above in A1 condition and must be sold for cash. Apply Iveson L. Cooke, Fenelon Falls. (2)

FIRST-CLASS set of tinners' tools complete with benches, cheap if sold at once. For particulars write Box 54, Unionville. [3]

BUSINESS WANTED

WANTED—Good live hardware business in Ontario, city or town preferred. Box 677, HARDWARE AND METAL, Toronto. (2)

SITUATIONS VACANT.

You can secure a "five-thousand-a-year" manager, or a "five-hundred-a-year" clerk, by stating your wants under "Situations Vacant."

WANTED—Traveling salesman. Apply by letter, stating experience and giving references. The Gurney Foundry Co., Limited, Toronto. (1)

WANTED—Experienced salesman for our specialties to work Montreal and eastward. Canadian that speaks French preferred. Address Wolverine Brass Works, Grand Rapids, Michigan. (1)

TINSMITH for old Ontario, experienced in bench work, cheese factory work, furnace work, sheet metal work and pipe fitting, must be able to do plumbing where iron pipe is used; must be worker and regular in his habits; this is a steady job and $18 per week is paid and overtime may be worked which would bring the wages up to $1,000.00 per year. Applications with references to be sent as soon as possible work can be commenced any time but for a satisfactory man I would wait until Jan. 20th, 1908. Living is as cheap in this town as any town of its size. It has the finest of schools and churches and a beautiful lake. Box 670, HARDWARE AND METAL, Toronto. (52)

DO you want to learn sheet metal pattern drafting? a postal card will bring you full particulars; we also sell patterns for any kind of sheet metal work. The Sheet Metal School, Galt, Ont. (3)

SALESMAN WANTED — An A1 stove, enamel and tinware salesman for an up-to-date store in the far west; good position for a young man of ability and energy. Apply to The McClary Mfg. Company, London, Ont. (3)

WANTED — A traveler for Canada, to represent a large Canadian manufacturer; must have acquaintance with wholesale and retail plumbing trade, retail hardware and gas companies; only those who can absolutely fill the requirements need apply; give references, age, married or single, salary expected. Address Box 684, HARDWARE AND METAL, Toronto. (4)

SITUATIONS WANTED.

Travellers, clerks, or tinsmiths, wishing to secure new positions, can engage the attention of the largest number of employers in their respective lines, by giving full particulars as to qualifications, etc., under "Situations Vacant."

WANTED — Position as foreman tinsmith and plumber; would take an interest. Box, 683 HARDWARE AND METAL, Toronto. [4]

WANTED—Position as foreman tinsmith; 18 year's experience; can do plumbing, lead or iron pipe. Box 685, HARDWARE AND METAL, Toronto. (5)

Poultry Netting—Discounts are 50 and 5 per cent.

Horseshoes—Iron, No. 0 to No. 1, $4.65; No. 2 and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to No. 1, $5; No. 2 and larger, $4.75.

Horsenails—No. 10 and larger, 22c; No. 9, 24c; No. 8, 24c; No. 7, 26c; No. 6, 28c; No. 5, 30c; No. 4, 36c per lb. Discounts; "C" brand, 40, 10, 10 and 7½ p.c.; "M.R.M." cold forged process, 50 and 5 p.c. Add 15c per box. Capewell brand, quotations on application.

Wire Nails—$3 f.o.b. Winnipeg, and $2.55 f.o.b. Fort William.

Cut Nails—Now $3.20 per keg.

Pressed Spikes—¼ x 5 and 6, $4.75; 5-6 x 5, 6 and 7, $4.40; ⅜ x 6, 7 and 8, $4.25; 7-16 x 7 and 9, $4.15; ½ x 8, 9, 10 and 12, $4.05; ⅝ x 10 and 12, $3.90. All other lengths 25c extra, net.

Screws—Flat head, iron, bright, 80, 10, 10 and 10; round head, iron, 80; flat head, brass, 75; round head, brass, 70; coach, 65.

Nuts and Bolts—Bolts, carriage, ⅜ or smaller, 60 and 5 per cent.; bolts, carriage, 7-16 and up, 55; bolts, machine, ⅜ and under, 60 and 5; 7-16 and over, 55; bolt ends, 52½; sleigh shoe bolts, ⅜ and under, 55; 7-16 and over, 45; machine screws, 60; plough bolts, 50; square nuts, cases, 2¾, small lots, 2¼; hexagon nuts, cases, 2¾; small lots, 2¼; stone bolts, 70 and 10 per cent.

Rivets—Iron, 60 and 10 per cent.; copper. No. 7, 36½c; No. 8, 37½c; No. 9, 38c; No. 10, 40c; No. 12, 43c. Assorted, No. 8, 38¼c and No. 10, 41¼c.

Green Wire Cloth—$1.75 per 100 square feet.

Coil Chain—¼-in., $7.25; 5-16, $5.75; ⅜, $5.25; 7-16, $5; ½, $4.75; 9-16, $4.70; ⅝, $4.65; ¾, $4.65.

Shovels—Discounts are 40 and 5 p.c.

Harvest Tools—50, 10 and 5 p.c.

Axe Handles—Turned, s.g. hickory, $3.15; No. 1, $1.90; No. 2, $1.60; octagon, extra, $2.30; No. 1, $1.60.

Axes—Bench axes, 40 and 5; broad axes, 25 per cent. discount off list; Royal Oak, per doz., $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.50; Copper King, $8.25; Columbian, $9.50; handled axes, North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.75; Copper King, $10.50 per dozen.

Churns—45 and 5; list as follows: No. 0, $9; No. 1, $9; No. 2, $10; No. 3, $11; No. 4, $13; No. 5, $16.

Auger Bits—"Irwin" bits, 47½ per cent., and other lines, 70 and 10 per cent.

Blocks—Steel blocks, 35; wood, 60.

Fittings—Wrought couplings, 55 per cent.; nipples, 70 per cent.; classified malleable fittings, 25 per cent.; malleable bushings, 50 per cent.; malleable unions, 55 per cent.

Hinges—Light "T" and strap, 65.

Hooks—Brush hooks, heavy, per doz., $8.75; grass hooks, $1.70.

Stove Pipes—6-in., per 100 feet length, $9.25; 7-in., $10.

Tinware, Etc.—Pressed, retinned, 70; pressed, plain, 75 and 2½; pieced, 25; japanned ware, 35; enamelled ware, Famous, 50; Imperial, 50 and 10; Imperial, one coat, 60; Premier, 50; Colonial, 50 and 10; Royal, 60; Victoria, 45; White, 70 and 5; Diamond, 50; Granite, 60 per cent.

Galvanized Ware—Pails, 37½ per cent.; other galvanized lines 33 1-3 per cent.

Solder—Quoted at 27c per pound.

Wringers—Royal Canadian, $36; B.B., $40.75 per dozen.

Files—Arcade, 75; Black Diamond, 60; Nicholson's, 62½ per cent.

Locks—Peterboro and Gurney 40 p.c.

Bluestone—7c lb.

Lath Yarn—10¾c.

Building Paper—Anchor, plain, 66c; tarred, 69c; Victoria, plain, 75c; tarred, 88c; No. 1 Cyclone, tarred, 84c; No. 1 Cyclone, plain, 66c; No. 2, Joliette, tarred, 69c; No. 2, Joliette, plain, 51c; No. 2 Sunrise, plain, 56c; Jubilee plain, 75c; Jubilee tarred, 88c; Buffalo plain, 66c; Buffalo tarred, 69c; Lion plain, 55c.

Ammunition, Etc.—Cartridges, rim fire, Canadian, 50 per cent.; American, 33 per cent.; pistol sizes, Canadian, 25 per cent.; American, 5 per cent.; military, Canadian, 20 per cent. off. American, 10 per cent. advance. Primers, $1.55. Loaded shells: English and Canadian makes, 12 gauge black soft, $18; 10 gauge, $22.50; 12 gauge smokeless, chilled, English, $24; Canadian, $23; 10 gauge smokeless, chilled, English, $28; Canadian, $27. Shot: Drop, per 100 lbs., $6.75; chilled, $7.15; buck, $7.55; 28 ball, $7.95. Powder: F.F., keg, Hamilton, $4.75; F.F.G., Dupont's, $5.

Iron and Steel—Bar Iron basis, $2.70. Swedish iron basis, $4.95; sleigh shoe steel, $2.75; spring steel, $3.25; machinery steel, $3.50; tool steel: Black Diamond, 100 lbs., $9.50; Jessop, $13.

Sheet Zinc—$8.50 for cask lots, and $9 for broken lots.

Corrugated Iron and Roofing, Etc.—Corrugated iron, 28 gauge, painted, $3; galvanized, $4.10; 26 gauge, $3.35 and $4.35. Pressed standing seamed roofing, 28 gauge, $3.45 and $4.45. Crimped roofing, 28 gauge, painted, $3.20; galvanized $4.30; 26 gauge, $3.55 and $4.55.

Pig Lead—Average price is $6.

Copper—Planished copper, 33½ per pound; plain, 28½c.

Iron Pipe—Black pipe, ¼-in., $2.70; ⅜, $2.85; ½, $3.75; ¾, $4.75; 1, $6.75; 1¼, $9.25; 1½, $11; 2, $14.80; 2½, $24.60; 3, $32.30; 3½, $40.50; 4, $46; 4½, $54. Galvanized: ¼-in., $3.65; ⅜, $3.80; ½, $4.50; ¾, $5.80; 1, $8.40; 1¼, $11.40; 1½, $13.80; 2, $18.40.

Galvanized Iron—Apollo, 16-gauge, $4.15; 18 and 20, $4.40; 22 and 24, $4.65; 26, $4.65; 28, $4.50; 30-gauge or 10¾-oz., $5.20; Queen's Head, 20, $4.60; 24 and 26, $4.90; 28, $5.15.

Lead Pipe—Quoted at $7.25.

Tin Plates—I.C. charcoal, 20x28, box, $10; IX charcoal, 20x28, $12; XXI charcoal, 20x28, 14.

Terne Plates—Quoted at $9.50.

Canada Plates—18x21, 18x24, $3.50; 20x28, $3.80; full polished, $4.30.

Lubricating Oils—600W, cylinders, 80c; capital cylinders, 55c and 50c, solar red engine, 30c; Atlantic red engine, 29c; heavy castor, 28c; medium castor, 27c; ready harvester, 28c; standard hand separator oil, 35c; standard gas engine oil, 35c per gallon.

Petroleum and Gasolene—Silver Star, in bbls., per gal., 20c; Sunlight, in bbls., per gal., 22c; per case, $2.45; Eocene, in bbls., per gal., 24c; per case, $2.60; Pennoline, in bbls., per gal., 24c; Crystal Spray, 23c; Silver Light, 21c. Engine gasolene, in barrels, gal., 25½c, f.o.b. Winnipeg, in cases, $2.60.

Paints and Oils—White lead, pure, $6.50 to $7.50, according to brand; bladder putty, in bbls., 2½c; in kegs, 2¾c; turpentine, barrel lots, Winnipeg, 70 cents; Calgary, 97 cents; Lethbridge, 97c; Edmonton, 98c. Less than barrel lots, 5c per gallon advance. Linseed oil, raw, Winnipeg, 65c; Calgary, 77c; Lethbridge, 77c; Edmonton, 78c; boiled oil, 3c per gallon advance on these prices.

FRANCO-BRITISH EXHIBITION.

The Canadian Government has in the course of erection a large special building for the accommodation of Canadian exhibits at the Franco-British exhibition, which opens in London, England, on May 1, 1908.

The Government part of the display will consist of exhibits of the natural resources of Canada, such as agricultural products. minerals, forestry, fish and game, horticulture, dairying and food products. There will be accommodation reserved for the display of Canadian manufactures, and where acceptable exhibits are offered, very generous treatment will be accorded them by the Government.

Applications will be received up to the end of the present month and enquiries should be addressed to W. A. Burns, Exhibition Branch, Department of Agriculture, Ottawa.

ACCOMMODATION FOR TRAVELERS.

At a meeting of the council of the Montreal Board of Trade, a resolution of the Commercial Travelers' Association that municipalities adopting local option, or issuing any hotel license, should be required by law to provide suitable lodging, eating and sample rooms for the traveling public, was endorsed. The resolution also stated that such lodging houses and hotels should be placed under a special license, and a medical health certificate for cleanliness and sanitation accompany each request for a license. It was decided by the council to do everything possible to better hotel accommodation, especially in temperance towns.

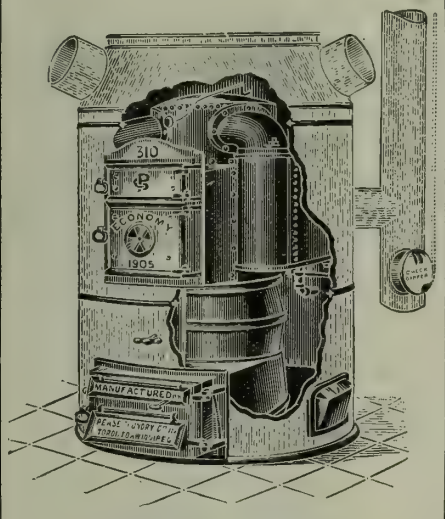
The First Cost



of a furnace is not half so important as the **Working Cost.**

Remember if the furnace you sell and install does not give satisfaction the customer will hold you responsible.

We do not claim

ECONOMY

Furnaces are the cheapest on the market, but rather the best, and in being the best they are actually the cheapest.

"ECONOMY FURNACES"

Cost More to Buy

BECAUSE they are made of more metal and better metal than the "cheap" kinds.

"ECONOMY FURNACES"

Cost Less to Keep

BECAUSE with ordinary intelligent care they will last longer than any other make on the market.

BECAUSE with their non-contracted castings and large surface they can supply more warm air on a smaller consumption of fuel.

BECAUSE they give better service with far less time and trouble for firing, cleaning or repairing.

An agency for Economy Heaters is considered (by those who know) to be their most valuable asset.

Readers of Hardware and Metal Are Requested to Make Use of This Department. Questions Regarding Patterns Will Be Answered by Experts Discussion is Also Invited on Any Matter Pertaining to the Tin Shop.

CIRCULAR HOOD FOR STACK.

To lay out a circular hood for a smokestack which projects through an inclined roof, proceed as follows:

Fig. 1 is a view of roof and stack. "A B C D" is elevation of the hood. "A B" is plan view of stack. The circle "C D" (Fig. 2) is a plan view of

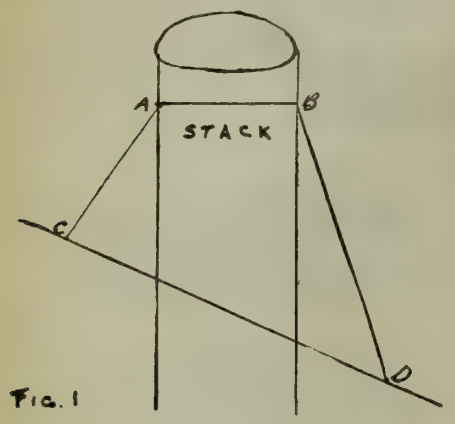

FIG. 1

the outer edge of flange. The circle "E F" (Fig. 2) represents the stack. Fig. 3 shows elevation of the hood "A B C D" similar to "A B C D" (Fig. 1). Above this elevation is a half plan of the top "A E B." Divide this semicircle into any number of equal parts and from these points draw lines perpendicular to "A B."

Now to obtain the actual shape of the section as its passes through the roof, construct half plan of the base, "G H J" and divide this semicircle into the same number of equal parts as there are in the semicircle "A E B." From the points draw perpendicular lines cutting the line "G H." Extend these lines to cut the line "C D." From these points draw perpendicular lines to "C D" and make these lines equal in length to the lines in the semicircle "G H J." Draw a line through these points. This will form a true shape of the section as it passes through the

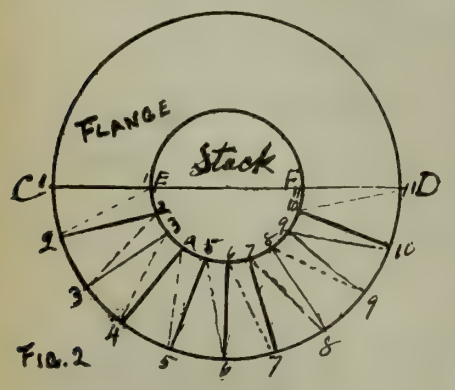

FIG. 2

roof and gives us the stretchout of the base used in obtaining the pattern.

Divide the semicircles (Fig. 2) into the same number of equal parts as there are in the semicircles in Fig. 3, and connect these points, as "1 1," "2 2," "3 3," etc., with heavy lines, and the points "1 2," "2 3," "3 4," etc., connect with dotted lines.

In Fig. 3 connect the points on line "A B" with points on line "C D." Extend the lines "A B" and "D S" to

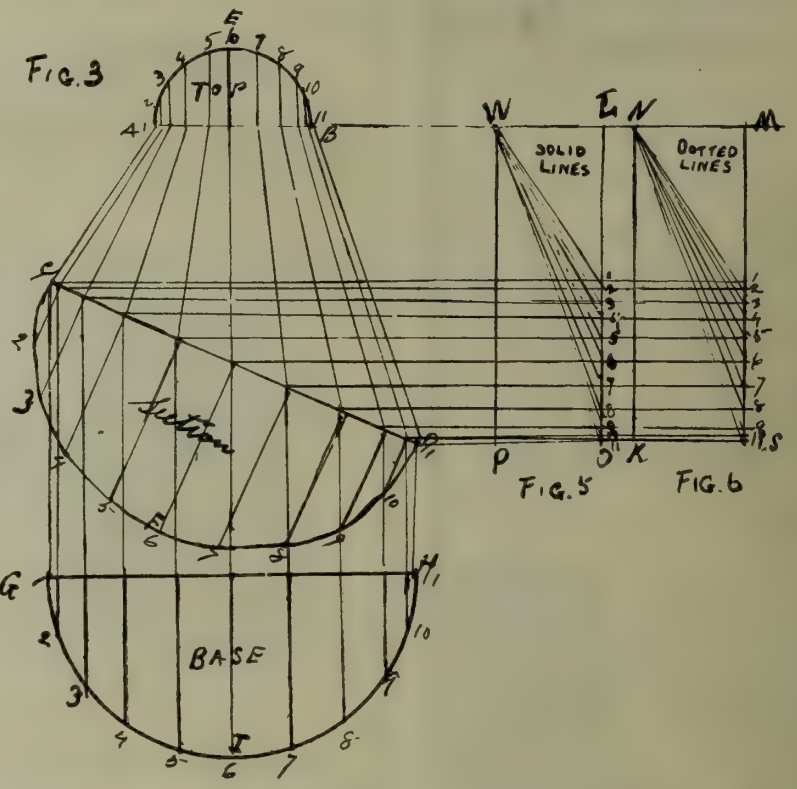

FIG. 5 FIG. 6

the right indefinitely. Do the same with the points on line "C D." At "S" erect a perpendicular line cutting the line "A B" at "M." From "S" set off the distance "S K" equal to the distance "1 2" in Fig. 2, and from "K" erect the perpendicular line cutting "A B" at "N." Connect the point "N" with the points 1, 2, 3, 4, etc., on line "S M." This gives us the true length of the dotted lines on pattern.

Draw the perpendicular line "O L." Set off the distance "O P" equal to the heavy lines in Fig. 2, as "1 1," "2 2," etc. From "P" erect a perpendicular line cutting "A B" at "W." Connect the point "W" with 1, 2, 3, 4, etc., on the line "O L." This gives us the true length of the heavy lines of the pattern.

Draw the line "A C" (Fig. 4) equal in length to "A C" in Fig. 3. Set a pair of dividers on distance "1 2" (G H J) and another pair on distance "1 2," "2 3," etc. (A E B) with 1 as a centre and distance, "1 2" on "C J D." Strike the arc "1 2" with 1 as centre and distance "N 1" Fig. 6 radius. Strike an arc cutting the previously constructed arc at 2, with 2 as centre and distance "W 1" Fig. 5 radius. Strike an arc with 1 as centre and distance "1 2" Fig. 3 as radius. Strike an arc cutting the foregoing arc at 2 and continue in this manner until the points "11 11" are reached. Draw line

through the points "1-11." This gives us one half the pattern. Edges must be allowed.

W. M. M.

NEW KEROSENE OIL STOVE.

An entirely new principle in the combustion of kerosene oil in cooking stoves and one which entirely eliminates all the objectionable features which have heretofore restricted the use of this fuel, has been perfected by the experts of the Novelty Manufacturing Company, makers of oil stoves, Jackson, Mich. This company is now putting on the market a stove which burns kerosene oil without a wick, asbestos ring, perforated tubes, or any of the devices which have heretofore limited the success of oil

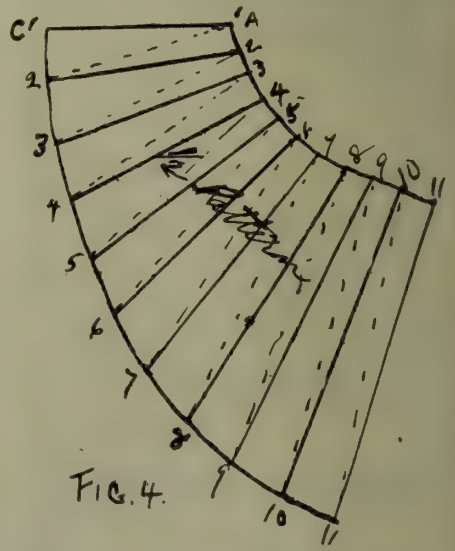

FIG. 4.

cooking stoves. It converts kerosene oil into gas, and burns the gas, on a similar principle to that employed in gasolene stoves. There is consequently no

possibility of the smoke, which was the serious objection of the old style of oil cooking stoves, the flame produced is perfect, steady and more intensely hot than from coal gas, and there is entire freedom from dirt, smut or disagreeable odor. The oil is fed to the burner by gravity. Just before it reaches the burner it passes through a small pipe, packed with wire gauze. It is here that the oil is converted into gas, and is fed to the burner through a needle-point valve. Like the gasolene cooking stove, this generator must be heated, and this is accomplished, when it is desired to start the fire, by attaching a small alcohol lamp for one minute. Denaturized alcohol, which sells for 35 cents a gallon, is used. In one minute the valve may be turned, allowing the gas to come in contact with the cast iron burner cap, with parallel apertures through which the blue flame plays. The flame is steady, clean and efficient.

Hardware Letter Box

Any questions on trade subjects will be answered by the editor in this department. Do you want any address, any special line of goods, anything relating to the hardware trade? Ask us. Letters from manufacturers, jobbers, travelers, retailers or clerks are solicited. Suggestions for trade improvement or discussions on trade evils are invited.

Two Pipes for One Chimney.

A correspondent at Rodney, Ont., writes: "As you are giving us the opportunity to ask all questions in the line of heating and plumbing, I would be pleased to get some advice.

"We have installed a furnace this fall and once in a while the check damper and the cap that is in the end of the 'tee' just as it leaves the furnace will blow out, making a report like a gun. As soon as you open the furnace door it gushes out about two feet and then it is all right again. The chimney has a 7-inch hole about 8 feet above where the furnace pipe enters. The cook stove pipe enters in the above hole. The furnace pipe has one elbow and the stove a bevelled elbow. It is a combination furnace, but they are burning wood in it."

Answer.—What seems to be the trouble here is that there are two connections to the same chimney, that is, the smoke pipe connections from both the furnace and the kitchen range or stove both enter the same chimney, thus providing a defection draft. The cool air enters through the stove and its connections when it is not in active operation and becomes a check on the draft from the furnace. The phenomenon spoken of is a perfect proof of an insufficient draft for the furnace and the incapacity of the chimney flue to carry off the accumulated gases.

As we are not informed as to the size of the chimney or its surrounding conditions, we cannot say that the chimney is too small for the furnace by itself, or whether the draft is also affected by untoward circumstances, so that even if the range were disconnected, the same experience might be had, due to some faulty construction of the chimney.

Many otherwise good working stoves and furnaces have been found faulty in operation and proved unsatisfactory to their owners, due to no other cause than poor drafts from faulty chimney connections. To obtain good results from a stove or furnace they should in all cases be connected to separate chimney flues of ample size and good construction, and in no case should they be of a smaller size than 9x9 inches and increasing in size according to the size of the firebox of the apparatus to which they are connected. The larger the firebox the larger will be the size of the chimney that will be required to give proper results.

We cannot too strongly impress on our readers the necessity for the strict observance of the above simple requirement, if annoyance from improper working ranges, stoves and furnaces is to be lessened, and insisting that each stove, range or furnace requires a separate chimney flue of ample size and proper construction. It will bring greater satisfaction to every user, dealer, and manufacturer.

Range Boiler Connections.

A Kincardine correspondent writes, stating that he has installed a bathroom outfit to which he cannot get a sufficient supply of hot water. The building is a one-storey cottage and as there is no room for the boiler in the kitchen it has been set in the bathroom. He asks how to change the pipes to make the boiler do its work, leaving it in the same position.

Answer—The arrangement of the stove, circulating boiler and the piping as indicated by our correspondent is shown in Fig. 1. Such an arrangement would be defective, both as regards the circulating pipes connecting the water front of the stove to the boiler and also the connection for the hot water supply from the boiler to the bath tub. In the first plan there would be little or no tendency for the circulation of the water between the stove and boiler due to the arrangement of the pipe connecting the bottom of the boiler and the bottom connection on the water front, and in the second place the connection at the side of the boiler leading to the bath tub is wrong, as no hot water could be drawn from the boiler until the entire contents of the boiler were heated to a point below this connection, and then only as much hot water could be drawn as lay below this point, and if

the drawing of water was continued after such hot water was exhausted then only the cold water would be had at the top.

A better plan for the arrangement of the piping is shown in Fig. 2. In this case the pipe leading from the bottom connection on the water front to the bottom of boiler would be run along the ceiling of the cellar and if there was no cellar then this pipe would need be carefully wrapped with a good non-conductor and tightly boxed to prevent freezing in the winter time. Also it should be provided with a draw-off stop

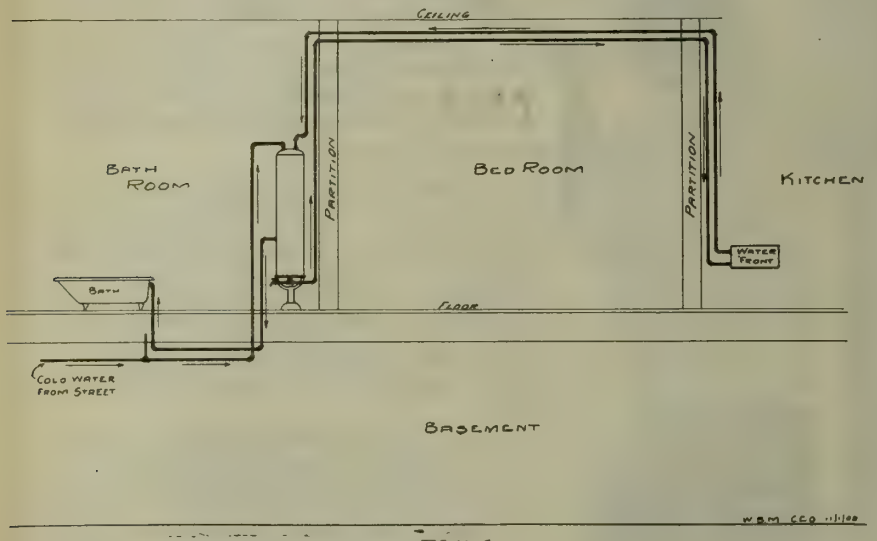

FIG. 1.

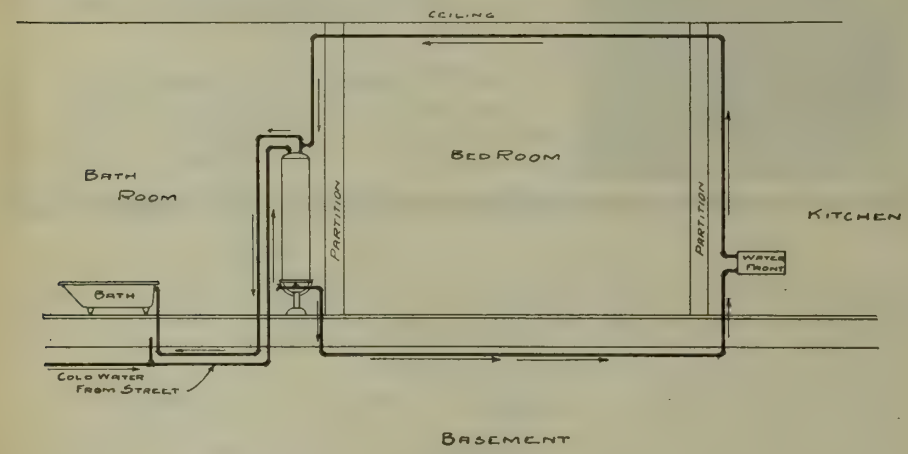

FIG 2.

(not shown in cut) at the lowest point to prevent the accumulation of sediment. The pipe leading from the top connection on the water front to the top of the boiler is run along the ceiling and thence down to the top of the boiler. This pipe should be provided with an air cock at its highest point (not shown in the illustration), or a relief pipe with valve that would be easy of access, so the accumulated air could be easily removed at intervals. Or if it is possible it would be still more preferable to bring this circulating pipe over to a point directly above the boiler, connecting the same into the side of a T and from the bottom of the T run on down to the connection with the top of the boiler. From the top of this T the connection would be made to the bath tub or to any other point where hot water was desired. This arrangement would do away with the necessity of any air relief pipe or valve as the act of opening the top would prevent the accumulation of any air in the circulation pipes between the range or stove and the circulating boiler. It is to be recommended that the flow and return circulating pipes between the stove or range, and the boiler should be 1-inch pipes instead of ¾-inch pipes as frequently found.

THE FREEZING OF WELLS.

Throughout many of the Northern States and Canada the freezing of wells and pumps causes much trouble and the greatest difficulty is experienced in keeping some wells open for use during the winter. Strangely enough, the shallow open wells give less trouble than the deeper, drilled or double-tubed driven wells, in which the inner or pump tube is carried below the outer casings. The determination of the cause of the freezing and of means for its prevention is of so great practical importance that a study of the subject has been made by one of the geologists of the United States Geological Survey. The freezing of wells is practically confined to districts where the air temperatures frequently go considerably below zero and where the materials penetrated are either porous or contain actual openings and passages through which the air can circulate. Deep wells that freeze may also exhibit other peculiar phenomena, such as indraft and outdraft of air, producing sucking and blowing, changes in character of water, fluctuations of water level and in flowing wells changes in discharge.

A study of the phenomena, as a whole, shows that they are connected closely with barometric changes. Freezing, indraft, low-water level, small discharge and clear water are all characteristic of clear weather and high barometer; thawing of the well and melting of the snow about the mouth, strong discharge and discolored waters always accompany low barometer. The direct cause of the freezing seems to be an indraft of cold air at periods of high barometer. Change of weather, reversing the direction of the air current, produces the thaw.

Many of the simpler devices adopted to prevent freezing are complete failures, while others are partly successful. The inherent difficulty lies in the construction of the well. The following suggestions are made by the geologist:

In open wells, where air obtains access through the soil and at the junction of the curb and cover, a cement cover should be tightly fitted to the curb, and the curb itself should be coated with cement for some distance below the surface.

In drilled or double-tubed driven wells the current of cold air drawn in at periods of high barometer between the outer and inner casing near the surface and passing out in a porous bed at the bottom above the water level will cause freezing if the water is pumped so that it stands in the inner tube above the lower end of the outer casing, and a long continued current of such cold air may cause freezing of the ground water about and in the well tube. For this condition it is suggested that the space between the outer and inner tube near the surface be packed with some impervious material. A filling of cement resting on an improvized plug is probably the most effective. The home-made rag packing sometimes used is too porous to serve the purpose.

The same treatment is suggested for wells with leaky castings, for driven wells passing through rocks porous enough to permit the passage of large currents of chilled air during periods of high barometer and for wells in which the outer casing ends in some cavern or open passage—that is, the space between the well tube and the pump tube near the surface should be plugged tightly with impervious material. About some wells the ground crevices through which the air circulates are so numerous that immunity from freezing can be obtained only by plugging the space about the pump tube from top to bottom with cement.

Trade Announcements

Catalogues, booklets and other printed matter issued by manufacturers, jobbers, etc., for distribution to the retail trade will be reviewed in this department. Senders of catalogues, etc., for review should draw attention to new lines and retailers, when sending for samples, etc., should mention this paper to show that they are in the trade.

Shovels and Spades.

D. F. Jones & Co., Gananoque, manufacturers of shovels, spades, scoops, draining tools, etc., have published a new and carefully compiled catalogue for 1908. The book has an attractive appearance and goes into the method of manufacturing used at the Jones Company's foundry. Each different style is illustrated in the new catalogue, and dealers handling this class of goods should not fail to send for the booklet, which will be mailed free to any in the trade on mentioning this paper.

Calgary, Alberta.

"Calgary, Alberta, Commercial Metropolis of Western Canada," is the title of a handsome and well-edited book which describes the city of Calgary to the prospective manufacturer or settler who intends seeking a location in the west. The book contains much useful information regarding Calgary and is illustrated with half-tone engravings of the public buildings, etc.

Holiday Souvenir.

The Stevens-Hepner Company, Port Elgin, remembered their customers and friends at New Year's with a beautiful little whisk as a souvenir. Their thoughtfulness was much appreciated by the recipients. If any were overlooked a post card to Stevens-Hepner Co., Port Elgin, may secure the memento by mentioning Hardware and Metal.

Harness Hardware.

Catalogue No. 25, of the Covert Mfg. Co., Troy, N.Y., contains 144 pages, describing fully Covert's Square Brand of harness hardware.

It is divided into four sections. Section one, contains snaps of all descriptions, such as loop, round-eye, open-eye, swivel, double, roller, buckle, trace, breeching and rope snaps. Section two, contains miscellaneous articles, like hitching posts and weights, carriage and wagon jacks, harness dees, etc. Section three deals with chains of all kinds —heel, rein, halter, stallion and breast chains, and section four, rope and web goods and special snaps for fire harness and electrical equipments.

The goods are fully described and the eleven-page index is arranged in alphabetical and numerical form, making it of great advantage to the dealer, when referring to it for any article.

Copies of this new catalogue will be sent to hardware houses throughout the country on application, by mentioning this paper.

The G.T.P. will expend $1,000,000 at Springfield during 1908. A round-house, engine-house, repair and machine shops will be erected in the spring.

ROOFING

Fire, Lightning, Rust and Storm Proof.

Corrugated Galvanized Iron

now being extensively used for Farmers' Barns—requires no Sheeting — Corrugations are all pressed—not rolled—easy to apply.

Are you after this profitable trade ? Carpenters will get it if you do not.

BUILDING AND INDUSTRIAL NEWS

For additional items see the correspondence pages. Information is solicited regarding building and industrial news, the incorporation of companies, establishment or enlargement of mills, factories or foundries, municipal water works and sewerage systems, railway or mining news, etc.

Railroad Construction.

During the past year the C.P.R. completed 518 miles of track in Western Canada.

The C.P.R. main line between Fort William and Winnipeg will be double-tracked during 1908. The distance is about 425 miles, of which 200 miles were laid in 1907.

The building of a branch line into Montreal from the main line of the Grand Trunk Pacific is now practically assured, according to the officials of the company, and construction work will be started in a short time.

The headquarters of the Winnipeg-Fort William division of the Transcontinental Railway have been removed from Kenora to St. Boniface. Track-laying is being pushed and it is thought that trains will be running on the new road next summer.

The C.P.R. has just placed a large order for cars with the Dominion Car & Foundry Company. The management last Saturday closed a contract with the Montreal Car & Foundry Company for 400 composite steel and wood freight and ballast cars. The contract for the steel required for these cars has been given to the Nova Scotia Steel Company of New Glasgow.

During 1908 the C.P.R. purpose building the following branch lines in the West: Complete line from Tuxford (Moose Jaw north) to Lacombe, on the Edmonton branch. Complete line from Saskatoon through to Wetaskiwin on the Edmonton branch. Complete line from Bredenbury to Esterhazy. Complete line from Weyburn to Stoughton. Complete line from Sheho westerly into Lanigan. Complete Wolseley-Reston line.

Building Notes.

Edmonton will build a new public school at a cost of $13 000.

Joseph Laflamme, Quebec, will erect a residence in the spring to cost $6,000.

During 1907 there were 296 buildings erected in Peterboro, at a cost of $761,-320.

Johnson & Co., Vancouver, will build a frame apartment house to cost $14,-000.

Edmonton will shortly call for tenders for the erection of a new incinerator to cost $12 000.

The Sydney, N.S., Cement Company have decided to enlarge their plant to admit the manufacture of brick from slag which has hitherto been a refuse that was thrown away.

An automatic fire sprinkler system is being installed in the "Surprise" soap factory at St. Stephen, N.B.

Edmonton shows an increase in building for 1907 of about $500,000. The money stringency no doubt affected building in the West last fall.

Brown & Love, Toronto, have received the contract for the new astronomical observatory to be erected at Toronto by the Dominion Government. The contract price was $91,000.

More building was done at New Westminster, B.C., during 1907 than in any one year in the history of the town. The buildings erected were principally residences, and a scarcity still exists.

The past year has been the greatest in the history of Amherst, N.S., as far as development is concerned. The amount spent during the year in building is nearly double that of any other year.

The Dominion Steel Co. has again been victorious in their suit against the Dominion Coal Company, which indirectly involves about $15,000,000. The latter company have served notice of appeal.

The capacity of the Dominion Iron & Steel Company's rail mill at Sydney has been doubled during the past two months. A new roller has recently arrived from the works at Sault Ste. Marie, Ont.

The Dominion Iron & Steel Co. have discovered a seven-foot seam of coal on Cavan Ave., near Glace Bay, N.S. The company expect to develop a colliery capable of producing two thousand tons of coal a day.

Permits were taken out in Ottawa during 1907 for new buildings of the aggregate value of $2,364,950, an increase of over half a million as compared with 1906. The total number of buildings erected last year was 355.

The Toronto Christian Scientists have purchased a site for their proposed new temple, which will cost in the neighborhood of $150,000. The plans have not been taken up to date, it being understood that building will start in the spring.

Building permits issued in Calgary during 1907 showed an increase of about one million dollars over 1906. The figures as submitted by the building inspector are, in 1906, $1,109,166; in 1907, $2,094,264. The most important items for which permits were issued are the following: 464 private houses costing $675,000; 8 warehouses, $109,-350; factories $98,000; schools, $105,-000; apartment houses, $55,000; city hall, $150,000; C.P.R. depot, $157,000; Government Land Titles Office, $100,-000.

The shareholders of the Hamilton Steel and Iron Co. are in luck. The capital of the company is being increased from $1,513,600 to $5,000,000, and, without putting up any more money, the new issue of stock is being divided among the shareholders, who will receive three shares of the new stock for every one they held of the old. The directors have been able to pay 6 per cent. on the old capital, and at the same time build up a plant which they now estimate is worth the $5,000,-000.

Companies Incorporated.

A company has been incorporated under the title of the Hosmer Mines for the purpose of carrying on mining operations, and to construct, own and operate telephone and telegraph lines throughout Canada. The capitalization of the company is half a million dollars, and the head office is in Montreal. A number of prominent Montreal Railway men are interested, including the following, whose names are on the charter: D. Mc Nicoll, Walter R. Baker, D. Mactier, and Ernest Alexander, all officials of the Canadian Pacific Railway, and Edward W. Beatty, solicitor of the same company.

FILES AND THEIR USE.

To choose a flat file, turn its edge upward and look along it, selecting one which has an even sweep from end to end, and having no flat places or hollows. To choose a half-round file, turn the edge upward, look along it and select that which has an even sweep and no flat or hollow places on the half-round side, even though it be hollow in the length of the flat side.

In draw-filing, take short, quick strokes, which will prevent the file from pinning and scratching. Long strokes, no matter how long the work may be, are useless save to make scratches. Remember it is less the number of strokes given the file than the weight placed upon it that is effective; therefore, when using a rough file, stand sufficiently away from the work to bring the weight of the body upon the forward stroke. New files should be used at first upon broad surfaces, since narrow edges are apt to break the teeth if they have the fibrous edges unworn.

For brass work, use the file on a broad surface until its teeth are dulled; then make two or three strokes of the file under a heavy pressure upon the edge of a piece of sheet iron, which will break off the dulled edges of the teeth, and leave a new fibrous edge for brass work.

Use bastard-cut files to take off a quantity of metal of ordinary hardness; second-cut in fitting, and also to file unusually hard metal; smoothing to finish in final adjustment or preparatory to applying emery cloth; dead smooth, to finish very fine work; float file on lathe work.

To prevent files from pinning, and hence from scratching, properly clean them, and then chalk them well.

SAFETY AUTOMATIC REVOLVER

You Must Pull the Trigger

or there will be no discharge. This is the *one* revolver that cannot go off by accident. We make the kind that discharges when you want to shoot and not before. One million six hundred thousand have been sold and not an accidental shot. As handsome a revolver as is made; in a number of styles and several sizes. As safe as a spiked cannon, but as full of business as a hornet's nest.

M.R.M. CO.

Oiled and Annealed Wire

Our "OILED AND ANNEALED" Wire, or, as some people call it, "Black" Wire, is made from a superior quality of Rods.

Our process of oiling is such as to ensure a dry surface, enabling it to be handled without loss of its protective qualities.

In annealing, we are careful to have it sufficiently soft and tough to stand the usage for which it is intended.

We make both large and small diameter coils.

The Montreal Rolling Mills Co.

Fire Notice

We beg to notify our numerous customers and friends that the fire which visited our premises on the 12th inst. caused only slight damage in one of the lower flats and in our samplerooms.

We immediately cabled our factories in order to replenish our stock and will be able to supply the wants of our customers in a very short time.

Asking for forbearance of our esteemed patrons whose orders may be delayed for a few weeks, we would solicit a continuance of their favors.

Paint and Oil Markets

MONTREAL.

Montreal, Jan. 17.—Despite the turn of the year, and the fact that a number of travelers are now on the road, there is at present very little activity to business. It is hard to eliminate the holiday feeling which seems to prevail throughout the country.

Linseed Oil—This line has developed a drooping tendency, and holders have shaded their prices 2c per gal. We therefore quote: Raw, 1 to 4 barrels, 57c; 5 to 9 barrels, 56c; boiled, 1 to 4 barrels, 60c; 5 to 9, 59c.

Turpentine—The wood distilled turpentine, apparently, does not seem to be growing into popularity, and quotations are therefore purely nominal. On the genuine southern turpentine a spurt of several cents has taken place in the primary markets, but local holders are slow to make a change as this movement may only be spasmodic. We continue to quote: Single barrels, 70c; wood distilled turpentine, pure, 64c.

Ground White Lead—This article still shows a slight weakness, and grinders are disposed to make concessions for round lots. Consequently we lower our quotations 25c per 100 lbs., as follows: Government standard $6.50; No. 1 $6.25.

Red Lead—Red lead also yields to the decline in pig lead, and prices have eased off ¼c per lb. We now quote: Genuine red lead, in casks, $5.75; in 100-pound kegs, $6; in less quantities at $6.75 per 100 pounds. No. 1 red lead, casks, $5.50; kegs, $5.75, and smaller quantities $6.50.

Dry White Zinc—There is a light call only for dry white zinc, but as the leading brands are not over abundant quotations remain firm: V.M. Red Seal, 7½c; Red Seal, 7c; French V.M., 6c; Lehigh, 5c.

White Zinc Ground in Oil—This line continues its even course, and is without feature. We quote: Pure, 8½c; No. 1, 7c; No. 2, 5⅝c.

Varnishes—Shellacs, hard oil finish, and carriage varnishes, are all in better demand than for some time past, although orders cannot be said to be heavy. Manufacturers seem to be feeling their way, and buying with caution.

Putty—For the first time in a long period orders are extremely light. Stocks are ample in all size packages, but prices, however, are firm, and we quote: Pure linseed oil putty, bulk, in 800-lb. casks, $1.75; in 25-lb. iron drums $2.05; in 25-lb. tins (3 in a case), $2.15; bladder putty in barrels, $1.95.

TORONTO.

Toronto, Jan. 15.—Prices remain without change with the exception of linseed oil, which during the week has been shaded several cents each way but at present remains about the same as a week ago. The travelers are on the road again but business is not very brisk at present and the orders coming in are not quite up to last year's average. White lead remains at last week's figures, though a decline is looked for.

Linseed Oil—Although the market in great Britain has been advancing steadily for the past week or ten days, the jobbers have not made any advance in Toronto to the present, but it is very likely there will be some advance in the near future, as English oil would today cost in Toronto for car lots more than the Canadian price at the present time is for single barrels. Quotations are: Raw, bbls., 59c. Add 3c to this price for boiled oil, f.o.b. Toronto, Hamilton, London, Guelph and Montreal, net 30 days.

Turpentine—It was thought that on account of the accumulations in the Southern markets there would be no material advance but in the past two weeks prices have advanced some 10 to 14c per gallon at the place of production in the Southern States. The price in Toronto has now been made only a very few cents above the actual cost for carload lots. A year ago the same thing happened on this market and prices at Toronto soared to 99c a gallon. Quotations are still uncertain and vary daily, for single barrels we quote 70 to 73c; 2 to 4 barrels, 72c. Less than barrels 5c advance.

Red Lead—Since last week prices have remained firm, though a slight decrease is looked for daily. The demand is at present slack but it is felt that the bottom of the market is almost reached. We still quote: Genuine, in 50 lb. casks, at $5.50; genuine, in 100-lb. kegs, at $6.

White Lead—The decrease prophesied in last week's market has not yet taken place though a change is expected daily. Only small orders for immediate delivery are being booked. Prices are as follows: Genuine white lead, $675 to $6.90; No. 1, $6.50 to $6.75.

Petroleum—The demand remains steady at present and no change of prices have occurred. Quotations remain: Prime white, 13½c; water white, 15c; Pratt's astral, 17½c.

Glass and Putty—Glass is moving actively with a fairly good January demand for putty. We now quote: Barrels of bladders at $1.95 per 100 lbs., and less than barrels at the rate of $2.10 per 100 lbs.

Shellac—The shallac market is steady at present with no change in quotations. The demand is fair for this month. The following prices prevail: Pure white, in bbls., $2.25 to $2.50; pure orange, $2; and No. 1 orange, $1.90.

Varnish—The demand for varnish is steady, though orders received are for small quontities only. Quotations are as follows: No. 1 furniture in bbls., 65c; elastic oak, in bbls., $.125; light hard oil, in bbls., $1.05.

In a recent issue of the Trade and Commerce Reports an item appears which draws attention to the large amount of Canadian wall paper being sold in Australia. This branch of manufacturing has hitherto been confined to home trade and as the report says there is a strong demand for the Canadian article, the result will likely help to build up the trade of the wall paper mills in this country.

REASONS: THE STANDARD FOR EXCELLENCE IN DEATH-DEALING QUALITIES, AND, CONSEQUENTLY, ITS GROWING POPULARITY.

"FAMILIAR," TO EVERY ONE, AS "HOUSEHOLD WORDS,"

THE CANADA PAINT COMPANY, LIMITED

A Paint Catechism

By G. B. Heckel.

55. What are the characteristics of the volatile oils? Of the two used in paint turpentine is derived by distillation from the sap of pine trees, the residual product being rosin. Wood turpentine is distilled from pine stumps and roots. Benzine is that distillate from crude petroleum which has a gravity of from 60 to 72 degrees by the Beaume hydrometer; the lighter products are gasolenes, etc.; the heavier products, fuel oils, burning oils, lubricating oils, etc. The Texas petroleums, having an asphalt base, yield benzines of lower gravity and hence slower evaporation than the oils of the Ohio valley, etc. Turpentine and benzine have each a characteristic odor. Both are solvents of oils, resins, etc. Of the two, turpentine evaporates the more slowly, but some of the benzines approach it very nearly in this respect. Turpentine in the retail and jobbing market is frequently adulterated with heavier, non-volatile petroleum oils but benzine is never so adulterated. Benzine on evaporating leaves no residue and has no effect on the paint film. Turpentine, being a slight oxidizer, is thought to have some drying action and is also believed (because while the benzine can all be recovered from paint by distillation, the turpentine cannot) to leave something in the paint film. If so, it would seem that this residue could be nothing except rosin.

56. For what purpose are volatile oils added to paint? For their mechanical effect alone. To facilitate the labor of spreading, to reduce excessive proportions of oil, to hasten the "setting" of the paint, to reduce the gloss of under coats and thus improve the adhesion of subsequent coats and to destroy gloss so as to leave a dull finish.

57. Has turpentine any advantage over benzine for these purposes? Such advantages as it may have are largely dependent on its slower rate of evaporation. This advantage is reduced in the case of the heavier benzines, and with the rapid destruction of our pine forests the cost of turpentine promises soon to be prohibitive for use in anything except the most expensive varnishes. The only exception to this is in "flat work," for which benzine is not satisfactory. Wood turpentine varies greatly in quality, dependent upon the method of manufacture. The better grades, when properly refined are practically identical with sap turpentine.

58. What are varnishes? Varnishes, as used in paint manufacture, are solutions of resins or of fossil gums in drying oils. Their principal application is in enamels and similar specialties.

59. What are the characteristics of varnishes? They yield a firmer, smoother, and more lustrous coating than oil, and are capable of being rubbed to a finer finish. Some "japans," as already stated, have the character of a varnish. Some pigments, of which zinc oxide is a conspicuous example, appear to form a tough, elastic combination with the gum resins, entirely different from the compound formed with linseed oil. This property is utilized in the preparation of enamel paints.

60. In view of what has been said, can there be a "standard" formula for paints? No. As may be inferred it is possible with different formulae to produce practically the same results; hence any attempt to establish standard formulae merely tends to limit investigation and improvement; to throw the paint industry into the hands of a few producers of raw materials and to stifle competition as well in quality as in price.

61. Is any standard possible for paints? Yes; the standard of quality as determined by results.

62. What is a reasonable standard of quality for house paints? It is based on accumulated experience with the best grades of paints, and indicates the following as the requirements for a good paint under average conditions: 1. To cover upwards of 300 sq. ft., two coats. 2. To produce a surface that is neither too hard nor too soft. 3. To have an average life of four years. 4. To be durable as to color. 5. To leave a surface suitable for repainting.

(To be Continued).

AN OPTIMISTIC NOTE.

Walter H. Cottingham, vice-president and general manager of the Sherwin-Williams Co., Cleveland, has been making one of his regular visits to the Montreal office. Interviewed by Hardware and Metal, Mr. Cottingham said he was very pleased with the progress made, and the outlook in Canada was very satisfactory. All their travelers were now on the road, and the number and value of the orders were well up to average. The men reported conditions in their territories as being good, and expected to exceed their past returns. "We are quite optimistic," continued Mr. Cottingham, "and are planning now to start our factories at full speed again, after the usual season's lull, as we are confident we are going to get a great volume of trade in the spring. So far as business in the States is concerned our travelers report very favorably, and their orders at the time I left home showed an average above that of last year. The fact that we sent out at the first of the year two hundred representatives was telegraphed by the press agencies all over the States, and this, we are told, helped to a large extent to restore confidence. It showed that we, at any rate, were not afraid of the future. I am quite optimistic as to the conditions in Canada, as well as the States," concluded Mr. Cottingham, "and have no fears as to the trade prospects."

In a recent bulletin sent to the firm's selling staff a fortnight or so ago, Mr. Cottingham gave the following reasons why there should be no pessimism for the future. The bulletin states, in part:

America is a great and an extraordinary country. *Whatever she does, she does in a big way. When she goes in for a panic it's a good one; not a little flurry, not a little storm, but a good, stiff hurricane—one worthy of her vastness and her gigantic force. Big storms, while extremely severe at the time, don't last long. The great financial hurricane that has swept across the land is over. It will take a little time to clear away the debris, but not long, for the wreckage has not been great, and the warm sun of prosperity will soon repair what damage has been done.

It is idle to say there was no reason for the financial disturbance that has dislocated the trade of the country. It is senseless to blame any one man or any one thing for it. The truth of the matter is the country has been over-

A HEART-TO-HEART TALK TO DEALERS

You are not in business for fun, but there is some fun doing business when sales are steadily on the increase and the goods go off the shelf before having a chance to become shop-worn.

There's a way to secure such a condition of things—a way that is making money for many paint dealers, and will make money for you if you will do as they are doing.

This is an age when to make business flourish you must advertise. You say advertising costs money; but suppose you handle goods made by a house that advertises the goods for you, and does it in a way that booms your business and brings trade right to your counter. Suppose your store should be advertised, and an attractive reminder of your business placed in the home of the best paint patrons of your community without costing you a penny—wouldn't it be to your advantage? Of course it would.

IF YOU ARE INTERESTED

in a proposition of this kind—if you want to increase your trade, build up a prosperous business, and make your store the center of the paint trade of your town—write and ask us to explain our methods, and let us show you how we help dealers who handle **Martin-Senour Paint** move the goods. We are doing it for others, we can do it for you. Let's talk it over. Write today.

The MARTIN-SENOUR CO., Ltd.

"Pioneers of Pure Paints"

142-144 Inspector Street, Montreal.
2514-2520 Quarry Street and Archer Avenue, Chicago. (Est. 1878.)

means that that can contains

The Highest Quality Paint

that can be manufactured.

It means that that paint is what your customer wants, and that by giving him what he wants, when he wants it, you are making a good commission for yourself.

Give our line a trial, you'll not regret it.

Eight hours is all that is necessary for the ***"Island City"*** brand of ***Floor Paints*** to dry.

Our Travellers get all the credit of orders sent in from their ground.

P. D. DODS & CO. - MONTREAL

VANCOUVER TORONTO WINNIPEG

trading, by reason of too rapid expansion. We have had two months of liquidation, and values are now down to a point where people are willing to take hold again. Money is slowly seeking its proper functions once more, and only requires to be encouraged to come forth in volumes. The great restorative is confidence, and confidence can only be created by the exercise of sane and safe business methods. The big financial men of the country know this, and I believe all business will now be done on a sounder basis than ever before.

Remember, this has been a money panic, not a hard times panic. We have suffered not from want of business, but from too much business. We have seen that too great prosperity can wreck trade, as it often does an individual; and he is a thoughtless business man who fails to learn the lesson.

I believe the worst is over, and there will be a steady progress towards complete recovery. Our belief is based on the fact that values are again down to reasonable figures and that there is now more money in the country than ever before. Our vast crops, the most valuable in the history of the country, are being marketed at high prices; our exports are growing in greater proportion to imports; and the balance of foreign trade is greatly in our favor. Confidence is rapidly being restored. The country is not only as sound as ever it was, but sounder.

It's up to every patriotic, enterprising business man and concern to do their part in restoring confidence, by taking up once more in an active and intelligent manner the work that has been temporarily interrupted. This done, conditions will soon become normal, and that prosperity which we have long been accustomed to and which is the fair reward of energy and ability in a wonderfully productive land, will soon become general again and stir us up to new and greater achievements.

This company is going to do its part.

PRACTICAL INFORMATION.

The column known as "Paint Catechism" contains information each week which every man working in the hardware store should know.

It will be noted that the writer of this catechism, G. B. Heckel of Philadelphia, makes paint efficiency the one standard in judging paints. Paint quality means paint efficiency according to his view. It is also clear that the compiler of this catechism is not in sympathy with the ideas on which the North Dakota Paint Law was founded. But all of us are looking for information and the paint question is one which bears careful investigation. The hardware merchant and his clerks need to know this side of the question.

The catechism says some interesting things about white lead. The claim is made that strictly pure white lead paint has not the efficiency of some other paints, which are also the results of careful investigation and experience. This is a subject much argued and it will probably be some time before the paint trade reaches a unanimous verdict. But setting these contentions aside, there is much good information here for the man selling paints in the retail store.

How much surface wood, should a gallon of paint cover?

How long should it last and look well?

What causes chalk, peel, scale, flake, or wear away?

These are simple questions, but they are asked every day in the hardware store during the season when paints are selling. And there are too many merchants and clerks who cannot give intelligent answers.

By the way it is well to suggest that readers of this department take their back numbers of Hardware and Metal for several issues past and read the "Paint Catechism" which has appeared in those numbers. You may have read it carefully when the paper first came, but it is well to brush up on these lessons.

When a man pleases himself he gets the applause of at least one person.

If you would become a student of human nature, begin by studying your own.

Mistakes and Neglected Opportunities

MATERIALLY REDUCE THE PROFITS OF EVERY BUSINESS

Mistakes are sometimes excusable but there is no reason why you should not handle Paterson's Wire Edged Ready Roofing, Building Papers and Roofing Felts. A consumer who has once used Paterson's "Red Star" "Anchor" and "O.K." Brands won't take any other kind without a lot of coaxing, and that means loss of time and popularity to you.

Something You Ought to Be Selling

New Century Style "B"

The New Century method of washing has succeeded, not because of its ease, speed and simplicity only, but because it gives better results than are possible with any other method.

This machine has a wringer stand too, not a rickety affair, but a convenient, strong, rigid attachment, always in position, never in the way.

The experience is in the machine. You'll hear no complaints of it and have no excuses to make.

They are the best there is.

Dealers, don't load up with experiments, it is a losing game

BLOWERS AND FORGES

No. 400 Blacksmith's Blower.

No. 400 CHAMPION BLOWER

This Blower has revolutionized the world in making hand blast.

The adjustable ball-bearings are made from the highest grade tool steel. The cup and cones are lathe turned, hardened as hard as glass and ground to the highest possible finish, made for right or left hand fires.

Fan, 12 inches diameter, with "Whirlwind" Blast, Anti-clinker Heavy Nest, Tuyere chore and pipe complete.

Weight 150-lbs.

No. 408 CHAMPION FORGE

This Forge is built of heavy steel plate and is supplied with the No. 400 "Whirlwind" Tuyere Chore.

It is a practical forge for government use, Bridge and Tank Builders, Boiler Work and General Blacksmiths.

Fan, 12 inches diameter. Weight 225-lbs.

No. 408 Champion Forge.

No. 2 BOILERMAKER'S LEVER FORGE

The Champion Boilermaker's Lever Forge is supplied with the Champion Standard Lever Motion used on over 400,000 Blowers and Forges.

The Champion Oscillating Journal Bearings of these Forges prevent twisting and binding of the bearings.

This Forge will produce blasts to weld iron 3 inches to 4 inches in 5 to 10 minutes. Supplied with Cast Iron Hearth 23 in. x 35 in. Height 30 in. Fan, 12½ in. Weight each 120-lbs.

No. 2 Boilermaker's Lever Forge.

No. 1 LEVER BLACKSMITH'S FORGE

This Forge is supplied with the Lever Motion, also has improved bearings, carrying enough oil to last six months. Cast Iron Hearth 32 in. x 45 in. Fan, 16 in. Height 30 in. Weight without tank 360-lbs., Weight with tank 375-lbs.

No. 1 Lever Blacksmith's Forge.

Horse Rasps Plain or Tang

You should aim to keep in stock only the best tools made for each particular trade to which you cater. Certain makers of tools make a closer study of the user's needs than others, and take greater care in the selection of materials, and inspection of workmanship.

Such is true of **Heller Bros.** blacksmiths' and farriers' tools. They have been known for many years to mechanics as the best tools of the kind to be had and the dealer has no difficulty in finding **ready sale** for them.

The lines illustrated are only a few of the **Heller Bros.** lines we stock.

Ask our travellers for their prices.

Fire Notice

We beg to notify our numerous customers and friends that the fire which visited our premises on the 12th inst. caused only slight damage in one of the lower flats and in our samplerooms.

We immediately cabled our factories in order to replenish our stock and will be able to supply the wants of our customers in a very short time.

Asking for forbearance of our esteemed patrons whose orders may be delayed for a few weeks, we would solicit a continuance of their favors.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines These enquiries come from Wholesalers, Manufacturers and Retail Dealers, who usually intimate they have ooked through Hardware and Metal, but cannot find any firm advertising the line in question. In the majority of cases these firms are anxious to secure the information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay them to advertise in larger space.

MAKE YOUR OWN LIGHT

IT'S CHEAPER AND BETTER.

"S. S." GAS LIGHTING MACHINES

A Few Points of Superiority based on Comparisons let US tell YOU about the others.

MODEL E MACHINE

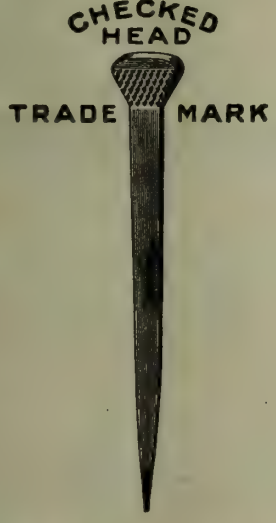
OUR No. 1 SINGLE ARC
500 Candle Power

OUR No. 3 SINGLE ARC
500 Candle Power

OUR No. 2 SINGLE ARC
500 Candle Power

THE "S.S." GAS LIGHTING MACHINE—The only gas machine that runs without pumping under a uniform pressure. The only gas machine that will successfully operate one gas fixture if desired. The only gas machine that can be generated in thirty seconds and without the use of alcohol or liquid gasoline. The only gas machine with a safety vent and escape pipe. The only gas machine with an automatic governor. The only gas machine with a seamless generator and the only one withan entirely seamless copper tank.

THE "SYLVESTER" LIGHT—Increases the brilliancy 100 per cent. Decreases the operating cost 50 per cent. No globes to break or clean. No mantles dependent on wire or magnesian supports. Less heat than an electric arc and gives more light. No odor from unburned gas or the products of combustion. No sound from the light, absolutely noiseless. No shadows cast all light thrown down. No flickering, the only steady light upon the market. A gas fixture more ornamental and unique, has never been invented.



Not one drop of oil passes through a hollow wire. We can give you cheapest insurance.

THE "SYLVESTER" NEW PROCESS MANTLE. Shipped in an envelope. Upon removing from envelope, can be crumpled up without danger of breaking. When straightened out, it's just as good as new.

WRITE US FOR PRICES—DO IT NOW.

CAPEWELL HORSE NAILS

will more than substantiate all we have said for them. Satisfied customers are what make a successful business, and we know that every horseshoer who has given Capewell nails a fair trial will come back again and again with good repeat orders.

Our business last year showed a large and very gratifying increase, and we thank you for the many orders received. It will be our constant endeavor to make the best goods and render entire satisfaction to all our customers, large and small. We pride ourselves on the quality of our goods and on the promptness of our shipments. SATISFACTION is our watchword for 1908 and for all years.

THE CAPEWELL HORSE NAIL CO.

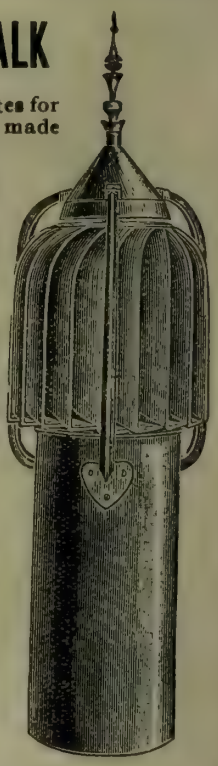
A COMMON SENSE TALK

AIR IS CHEAP. You do not pay rates for air like you do for water, yet a big fuss is made over the impurity of water and very often no thought is taken of the impurity of the air breathed from day to day and night to night.

Crowded rooms, whether in public places, schools, opera houses or factories, require ventilation as well as the private dwellings.

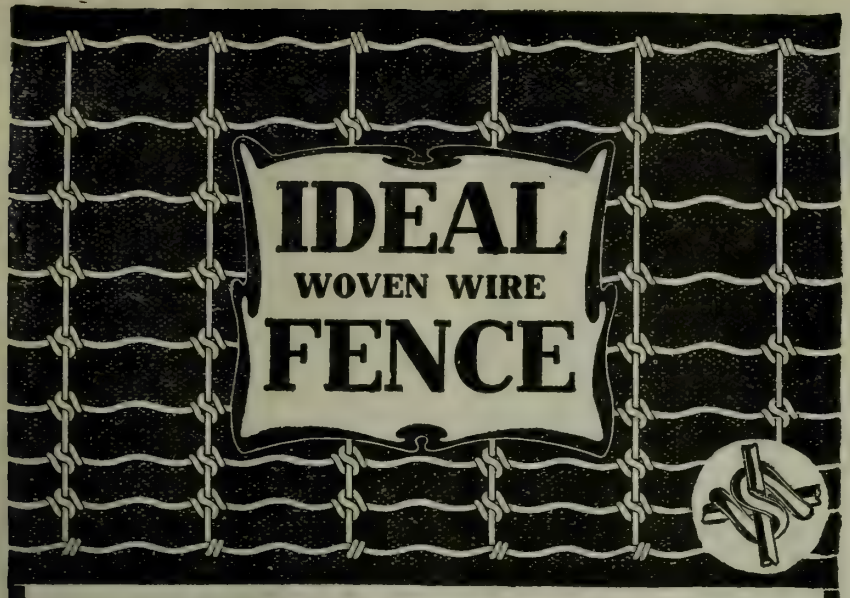


HOUSE BUILDING IS A SCIENCE NOWADAYS AND NO BUILDING IS COMPLETE WITHOUT ONE OF OUR AEOLIAN VENTILATORS.

THE VENTILATOR ITSELF IS AN ORNAMENT and can be made to suit the character of the building either as to size or as to quality of material.

Ottawa University,
Ottawa, May 30th, 1901.
Messrs. J. W. HARRIS Co., Limited, Montreal.
Dear Sirs:—Your "Aeolian" Ventilators placed on our University three years since have given us entire satisfaction. BROTHER NORMAND

Dealers everywhere will find a double profit in handling this ventilator. Write direct for catalogue and booklet to-day.



Learn about our system of ventilating. A pleasure to send books.

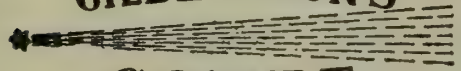
A Grip on Your Good-Will

If you will read through one copy of Plumber and Steamfitter of Canada, you will decide that you could not afford to be without it, if the subscription price were $5.00 per year instead of 50c. per year, which is the rate to Hardware and Metal subscribers.

The fact that we hold 90% of our subscribers, shows the strong hold we have on their good will.

Our editors and correspondents are on the look out for every job that is worth describing and illustrating. We show our readers the best work that is being done by Plumbers and Steamfitters in the various provinces of the Dominion; tell them of the difficulties that have been encountered, and explain how they have been overcome.



Subscription price 50c. per year to subscribers of Hardware and Metal.

Is not this paper worth one cent per week to you?

THE WANT AD.

The want ad. has grown from a little used force in business life, into one of the great necessities of the present day.

Business men nowadays turn to the "want ad." as a matter of course for a hundred small services.

The want ad. gets work for workers and workers for work.

It gets clerks for employers and finds employers for clerks. It brings together buyer and seller, and enables them to do business, though they may be thousands of miles apart.

The "want ad." is the great force in the small affairs and incidents of daily life.

CHICAGO

CAN WE HELP YOU ?

There are some hardware dealers living in this 20th Century who are still using 19th Century methods. They do not realize that Halifax is closer to Vancouver to-day than Montreal was to Toronto fifty years ago.

Twenty-five years ago it was a calamity for a merchant to lose a good clerk, for he knew it was practically impossible for him to get in touch with an experienced man. Such an idea as making a deal with a fellow hardware man a couple of hundred miles away either to buy a set of tinners' tools or to sell a second-hand counter or show case did not seem practicable to even the most progressive hardware men. If a man wanted to sell his busines he had to accept the highest price he could get from some one of his fellow townsmen for no one else knew of the opportunity or had any means of finding out about it.

To-day the up-to-date dealer

Creates His Opportunities

He states his wants briefly in a "Hardware and Metal want ad." and in four days' time practically every hardware merchant, clerk, hardware manufacturer and traveler has read the proposition, and it seems reasonable that somewhere among the "blue noses" of the Maritimes or the pioneers of the boundless West someone will want just what he has to offer.

Every Hardware Merchant in Canada

can take advantage of our "want ad." page. Ask yourself.

Is there not some article I would be better without if I could get a fair price for it? If you cannot get a fair price for it by appealing to the trade throughout Canada you had better sell it for scrap.

We can help you but **you must take the first step.**

Surely it is worth 25c or 50c to find the one man in Canada whose wants dovetail into just what you have to offer.

Rates:

2c. per word first insertion.
1c. per word subsequent insertions.
Box Number, 5c. additional each insertion.

MONTREAL **TORONTO** **WINNIPEG**

An Axe Axiom!

It stands to reason that if you sell a man a poor axe handle, which breaks the moment extra strain is put on it, that man will have a poor opinion of you and your store. It is equally evident that he will trade with someone else if that be possible. The inference is, that the more reliable the handles you handle the less chance there is of losing customers, and the more chance of gaining customers which the other fellow loses. The way to get and keep the trade is to stock

Don't Wait For Your Profit and Loss Statement

No need to wait for your Profit and Loss Statement for 1907 to know that Dominion Ammunition is the one to stock for 1908.

First—It gives satisfaction.

Second—It gives you a decent margin.

Third—It is called for by nine out of ten purchasers—owing to our liberal advertising backed by good goods.

Fourth—It is made in Canada, by Canadians and for Canadians. We might have urged this point first but we would be the last to bring it forth unless good quality and good business were not back of it.

Your interest is to sell Dominion Ammunition, and thus to create more satisfied customers and to make larger profits.

If your jobber won't supply you, write us.

What To Do Next Month

Some Practical Suggestions for the Hardwareman who has Completed Stock-taking and is Preparing for an Active Spring Trade.

Presuming that the arduous task of stock-taking is over, and every retail merchant is wise in attempting to get his inventory through by the end of the month, the procedure for February is clearly mapped out. The shelves are in order, the variouse lines assorted, the tail ends of stock conveniently placed for jobbing off, accounts in good shape, and everything clear for the year's operations. The merchant now knows where he stands, the dollars he has gained or lost, the lines which proved the most saleable, and the merits or demerits of his organization.

Start well by being assured that the clerical department of the store is as perfect and as complete, as it can possibly be. Perhaps your method of book-keeping could be improved, simplified or extended. A book added or taken away may mean all the difference between order and chaos in the working of the department. Do not be afraid to revolutionize entirely your method, if the inventory has shown that the book-keeping has been at fault. Start right away, and endeavor to improve it, for the merchant with a good system of accountancy holds a wonderful advantage over the man who is primitive in his methods. You may have in your mind a good scheme whereby a clearer and easier track can be kept of the selling and cost price of the goods, or of a neater and more comprehensive sales book, doing away with the confusion that may have occurred during the past year over certain sales. If so introduce the innovation at once. It is better to put a theory into use and find it wanting, than never attempt to improve your old methods. No system is so perfect that ingenuity cannot suggest an improvement.

* * *

Perhaps your plan of collecting accounts can be made more thorough. Debts may have been allowed to run on longer than they should have done in fairness to yourself. Probably you have made no sustained effort to get them in. It is well to remember that the bigger the cash trade done, the quicker the money of the firm is turned over, and the less amount of profit necessary. This applies to the same extent in the case of short and long credit. If no regular effort is made to close up accounts customers are led to believe that the bill can be settled at any old time. Trade is never lost by a polite, but at the same time, firm request for a settlement. The person who is offended by this intimation is a client whom one is best without, for he or she probably never intends to pay. The present scarcity of money must bring home to many the point that Hardware and Metal has been driving in for so long—the vital necessity of retail merchants adopting a rigid system of account collecting, if a purely cash trade cannot be worked up.

* * *

The coming month is a good time to effect improvements in the store. Space may be gained by the shifting of a counter, or by the more effective disposition of a show case. The smartening up of the silent salesmen, extra shelves, a few dollars spent on paint and paper, will all add to the appearance of the store. And let it not be forgotten that an attractive store is the best advertisement that can be secured.

* * *

Consider well the advertising that has been done. Has your money been spent in the most effective way? Have you carefully watched and weighed up the results attending the issue of your circulars, or your ads. in the local papers, or whatever advertising plan you may have adopted? If so, then your course is clear. Effective advertising is a sure way to success, ineffective advertising is money thrown completely away. If you have compared the returns from one plan of advertising with those from another; in fact, if you have studied the profit and loss of your publicity attempts as you would any line of goods in your establishment, then go right ahead on the course clearly set out before you. If there has been no such method in your advertising in the past, keep careful track in the future, for by such methods alone can the full measure of profit be gotten out of advertising. It may be, on the other hand, that you do not advertise at all. If so, commence at once and notice the difference that will result in the trade of your store.

Then comes the vital question of buying. The inventory has told the lines which have sold, and those which have hung fire. The experience of the past year has added to your knowledge as to the needs of the district. You are better equipped now in this respect than you were at the same time last year. Buy rightly, and more than half the battle is won. There are two important points to be considered—what to stock and the quantity. The second is usually the greater stumbling block. There is nothing more important than that you should not overstock yourself. Remember that in carrying a three months' supply, when a six weeks' one will suffice until a fresh consignment can be obtained from the jobber, you have tied up that amount of capital represented by the excess. You have lost the interest on the money and denied yourself other goods which could have been bought. This is a very important point, and one that is more often overlooked by the merchant than probably any other and yet it is just as essential as keeping down expenses, buying the best selling lines, and looking after collections.

* * *

Travelers will soon be calling round, probably some have already made their appearance. So make up your mind as to what you intend to order, and be careful in specifying as to the delivery. Different districts have different demands, and it is not possible to lay down any hard and fast selections of articles that will suit all merchants. Generally speaking, however, among the lines best suited for first spring delivery are fly netting, poultry netting, refrigerators, garden tools, wheelbarrows, rubber hose, stepladders, paint and varnishes, builders' hardware, wringers and washers. These are all good articles to carry and no dealer can go far wrong in, at any rate, basing his orders upon them.

HARDWAREMEN AT HOCKEY.

A fast and exciting game of hockey was played Thursday evening, 17th inst., at Montreal, between teams representing A. C. Leslie & Co., Limited, and Frothingham & Workman, Limited, the former winning by the close score of 2 to 1. The match was particularly clean, although strenuously contested, and it was only the steady defence of the "Queen's Head" team that kept Frothingham's fast forwards out.

This is the third of a series of games between the large hardware houses; Drummond, McCall & Co. having defeated Frothingham & Workman by a score of 4 to 1, and Frothingham having defeated Starke-Seybold & Co. team 3-2. The matches are exciting considerable interest amongst the trade generally, as was evinced by the large turnout at the match between Frothingham and Starke.

It is extremely gratifying to note the spirit of friendliness which exists among the different teams, and it is hoped that this will long continue.

The teams and officials were as follows:

A. C. Leslie & Co., Limited—Goal, Macnish; point, Foster; cover-point, Peard; rover, McCuaig; centre, Patterson; left wing, Copland; right wing, Finnie.

Frothingham & Workman—Goal, Fortin; point, Asselin; cover-point, McCoy; rover, St. Germain; centre, Fairfield; left wing, Brown; right wing, Walker.

Referee—Art. Brophy, Drummond, McCall & Co.

Retail Hardware Association News

Official news of the Ontario and Western Canada Associations will be published in this department. All correspondence regarding Association matters should be sent to the secretaries. If for publication send to the Editor of Hardware and Metal, Toronto.

THIS IS PRACTICAL TALK.

Writing regarding the coming convention of the Ontario Association, Frank Taylor, of Carleton Place, argues strongly in favor of as many delegates staying at one hotel as possible and also emphasizes the importance of the "Question Box" feature. He writes:

"It is certainly very important in my estimation that the delegates should all quarter at the one hotel as there is very much more information gathered from a dinner or supper table than any other way.

"There is not one delegate that comes to this convention that goes there out of sentiment. He comes here to learn so that he may be more proficient in his own business at home. This is one part of the last convention which the writer does not think received nearly sufficient attention, in other words, the question box was not opened until within two and a half or three hours of the closing of the convention and in most cases only one speaker was allowed to one subject. I think every question at the last question box should have been torn to pieces until it had not a leg to stand on and in that way a great deal of information would have been brought out. If you remember one subject that was very freely discussed was re the storing of gasolene, turpentine, etc., and very many there listened with great attention and learned considerable therefrom but not a subject brought out of that box but that every delegate present could have spoken on if he had wished to or if he had got the privilege.

"What we want at the next convention is to get some way of drawing more people into the discussion to get members to give more of their experiences along hardware lines, also to get them to ask questions and more experienced ones to answer them along particularly hardware lines.

"One thing that should appear in each issue of Hardware and Metal until after the convention is to urge the delegates to come to the convention at the hour appointed and come out each time. Last year half an hour was lost at every appointment through not over 50 per cent. of the delegates returning to the convention on time, making a total loss of equal to 25 per cent. of the total time at the convention.

"The writer personally is of the opinion that this convention should continue several days and is satisfied it would be about the most profitable time a dealer could spend to put in the best part of a week rubbing shoulders with his brother dealer.

"I hope that some arrangement, however, will be arrived at whereby all the delegates will be at one hotel excepting those who have friends in the city who cannot be expected to stay at the hotel."

NEXT MONTH'S CONVENTION.

Arrangements are nearing completion for the third annual convention of the Ontario Retail Hardware Association. The dates are definitely chosen for Wednesday and Thursday, Feb. 12 and 13, and the meetings will be held in a large hall in the Palmer House building, corner of York and King Streets. The Palmer House will be convention headquarters, a special rate of $2 per day being quoted to delegates, who should reserve accommodations as early as possible.

Single fare rates will be obtainable on all railways coming on Feb. 11 or 12, and returning up to Saturday, Feb. 15. No certificates are required, these rates being in force owing to the Ontario Horse Breeders' Annual Exhibition being held Feb. 12-14 at the St. Lawrence Arena, Toronto. Another big event in Toronto that week will be the series of concerts given by the Mendelssohn Choir in Massey Music Hall, Feb. 10. 11, 12 and 15.

In addition to these attractions some of the manufacturers and jobbers located in Toronto are preparing to make exhibits and throw their sample rooms open to visitors. One stove manufacturer from an outside point, is also preparing an exhibit to be located in the hotel lobby.

The convention gatherings are also expected to be more than usually attractive, the success of the "Question Box" feature last year ensuring that not a minute will be wasted at the meetings. The social features also will be such as to live in the memory of all who attend, some surprises being prepared in this direction.

Break away from business the second week in February and visit Toronto to rub shoulders and exchange ideas with your fellow hardwaremen from all parts of Ontario and you are pretty sure to go home satisfied with yourself and better prepared to push for trade during the coming year.

VALUE OF ASSOCIATION MEMBERSHIP.

"How many retail hardwaremen do you know intimately?" a former hardware merchant was asked. "Scarcely one," was his answer.

This man spent 27 years behind the counter as clerk, partner and sole proprietor of a flourishing hardware business, and sold his business before the Retail Hardware Association was organized. A few days before the last annual convention he expressed a desire to attend, but after thinking it over and remembering that he would be a comparative stranger there decided not to go.

What would 27 years in business mean now to an association member? It would mean one friend or more in practically every city and village in the province. To think that it would be almost impossible to strike a community but that you would have a cordial handshake coming and a friendly desire to serve you by a friend, carries a net value greater than selling tacks at 5 cents a paper.

No class of men can listen to and appreciate hardware talk and stories like hardwaremen, and there is a wealth of mutual good fellowship and pleasure when they get together. Joining the association is a short cut to large profits in the field of pleasure and happiness.

THE QUESTION BOX.

This feature of the convention programme should prove unusually interesting and the members are invited to give it more than ordinary attention. Every delegate will be given an opportunity to express his opinion on any of the important matters which will be brought before the meeting under the above heading. Arrangements will be made to have a box placed in some conspicuous position in the convention hall and members are requested to write out any questions which they would like to have discussed and place them in this box. Your experience in dealing with various evils may have been different from that of many other members. For that reason everybody is requested to give this question box considerable thought, prior to the meetings and then express himself fully on the various subjects which come up.

THE ANNUAL INVENTORY.

Last winter business was a little quiet in January, writes a hardware merchant in the Iron Age, and I decided to keep all hands busy, so we started in on our inventory. It was the first we had taken since I began business ten years before. We made a thorough job, and I gave it my personal attention. It took some time, nearly three weeks, to get everything down on paper and properly priced. I found four conditions which were somewhat unexpected: 1. We were carrying a much larger stock than I thought we had. 2. We actually had some goods in stock that I thought we were out of. 3. A large part of our stock was bought lower than the goods could be replaced for. 4. Many articles

were in stock without any cost or selling mark on them.

This brought four resolutions, as follows: 1. To take account of stock every year. 2. To mark every article when received with both its cost and selling price. 3. To buy more carefully and in smaller quantities. 4. To reduce my stock.

Immediately after inventory we instituted a bargain sale and worked off quite a lot of old stock. I also increased my insurance. The effects of my first inventory have been gratifying. To-day I have more money in the bank than ever before, and have been able lately to take advantage of all cash discounts. By paying my bills promptly I find that my credit is better and I am actually getting concessions which before I never had.

The results as obtained by this merchant can be secured by another. The reason that all hardware dealers do not take an annual inventory is simply shiftlessness. A man may say, "What is the use of going to all that trouble? The goods are in stock, and counting or weighing won't sell them. Better put the same energy in trying to make sales." The merchant who don't inventory his stock is generally the last one to put forth extra energy in selling it.

Best Time to Take Stock.

The time to take inventory is when business is dull. If this is in January take stock in January; if in July take it then. Some large hardware dealers take stock twice a year, but for the average retailer once a year will be found sufficient.

Divide the store force into working teams of two. Let one man count and call off and the other write down the items as called. Inventory sheets should not be copied, but bound, after being extended and footed, into a loose leaf binder, thus giving a complete original copy of the inventory. In this way errors in transcribing are avoided. Loose sheets have a decided advantage over a book, as a number of teams can be working at the same time, and the whole stock can thus be taken much more rapidly.

The inventory to be of value must be accurate. Do not estimate the weights or the quantities. Do not guess at the cost. Take all goods at the price for which they can be bought. If prices are lower put down your cost; if higher mark your cost up. If there are some articles in your stock that are out of date put your cost down, so that the goods can be sold. On some classes of heavy hardware the freight must be figured as part of the cost and should be reckoned in the inventory.

NOVEL BUSINESS BRINGING PLAN.

The Preston Progress gives the following interesting account of a novel and effective plan adopted by James G. Lorriman, advertising manager of the Metal Shingle and Siding Co., Preston, to get in touch with probable customers:

"About the middle of December the company inserted advertisements in the leading farm journals, offering prizes to people sending in lists of intending builders. Cash prizes were offered for the three largest lists, while to everyone sending in five names or over, a useful present was promised.

"The contest closed this week and was most successful in every way. Four hundred and one lists were submitted in all, representing every section of the country from Halifax to Vancouver. The total number of names obtained from these lists was 6,075, which seems to show that building activity will not be curtailed during the coming season. At any rate the Canadian farmers appear to have plenty of money as the great majority of these names were of farmers who intended building barns, implement sheds or other outbuildings.

"The winner of the contest was W. B. Anna Burgore, of St. Isadore de Prescott, Ont., who submitted 326 names. J. W. A. Stuart, of Dalmeny, Ont., was second, with 253 names, and Chas. J. McGuire, of Allumette Island, Quebec, captured the third prize, with 234 names. The next highest submitted 100 names, but the majority of the contestants had only from seven to twenty names. Fifteen neglected to sign their own names at all.

"The office staff is now busy getting out circular letters to all the intending builders mentioned in these lists, and favorable replies have already begun to come in. From present appearances, it will not be long before the factory is as busy as ever."

TORONTO BOARD OF TRADE.

The nominations of the Toronto Board of Trade last week resulted in the election of the majority of the officers by acclamation.

L. H. Clark, general manager of the Canada Malting Co., was elected president without opposition; J. P. Watson, First Vice-President; Henry Brock, Second Vice-President, and John F. Ellis, Treasurer, were also elected by acclamation.

CATALOGUES.

Mistake in Catalogue.

D. F. Jones Manufacturing Co., Gananoque, have asked us to correct a mistake which appears on pages 12 and 13 of their new catalogue. The prices of spades and shovels shown on these pages are wrong and should read 50c per dozen lower than they do. The new catalogue of the above company will be sent to hardware merchants on mentioning this paper.

Dana Company's Greeting.

One of the cleverest advertising circulars we have seen is that recently sent out by The Dana Manufacturing Co., of Cincinnati.

It is in the form of a hanger, about nine inches wide and a little over a yard long. Tinned at the top with eyelet to hang. A small mailing tube at the bottom gives it weight to hang taut, and makes it carry well through the mails.

A short optimistic talk about the new year, strengthened by the statement that they are going to spend just twice the money this year advertising Dana Peerless Freezers, Dana Food Choppers and Dana Mop Wringers, inspires confidence. Good half-tone cuts show their full line.

It is so attractively gotten up that it is almost sure to be hung up and kept.

New Catalogue on Saws.

Henry Disston & Sons, Philadelphia, have issued a newly revised catalogue on the manufacture of their make of saws. The book is carefully compiled and contains much information and a large number of cuts which would be of general interest to hardware merchants. hardware merchants. The above company's Canadian address is 112 Adelaide St. east, Toronto, and the book will be forwarded free by mentioning this paper.

U. S. IRON AND METAL TRADES.

New York, Jan. 23.—The Iron Age says: The question uppermost in the minds of furnacemen and steel makers alike is that of the prices for lake ores for the coming season, and it is possible that it may be settled at an early date. It is realized that these prices lie at the base of the whole structure. The interests are conflicting among producers and among consumers and are influenced by geographical considerations, too. There is a strong feeling in favor of maintaining prices, in the face of the fact that a good deal of ore will be carried over, and that many furnace companies cannot meet even present selling figures of pig iron and escape a heavy loss.

While the majority of sellers of pig iron are adhering to recently established prices, there is a sufficient number of producers in each of the principal districts who are willing to accept prices $1 to $1.50 per ton less to establish the market. It is not quite clear whether the tonnage taken by these is and will continue to be large enough to cause a diversion of business to those who are holding out for higher prices.

The fact has now come out that a considerably larger tonnage of foundry and forge iron has been placed since the beginning of the year than the trade generally realized, and that quite a good deal of it was marketed at a low level.

The output of the furnaces and mills is increasing somewhat, but it is difficult to express the improvement numerically. It is estimated that operations are close to 50 per cent. of full capacity, with the prospect of gradual betterment.

The policy of reaffirming prices seems to have been justified by the events in the case of wire products and of hoops and bands. The former, it is true, are entering the spring buying period, but it is a fact that the bookings are more than normal, even when taking that into consideration.

Makers of bolts and nuts are putting pressure upon the steel bar manufacturers in order to induce them to meet the competition of makers who use iron bars, now so much cheaper than steel bars. On the other hand, the manufacturers of agricultural implements urge that prices on steel bars be maintained in the interest of stability of values on their own products.

Window and Interior Display

Prizes awarded to Window Trimmers in Halifax, N.S., Brandon, Man., and Almonte, Ont., for good work done in our Christmas Competi ions—Announcement of Advertising Competition to be made later.

Holiday Display Prize Winners.

The judges who tackled the job of selecting the prize winners in our Christmas window dressing competition had a difficult job to tackle, and before making their decision found it necessary to call in the services of several of the best hardware window display artists in the Toronto stores.

The first consideration the judges had to keep in mind was the drawing power of the display. How many people would the window attract to the store and how large would be the sales made as a direct result of the display. The goods in the window were, of course, to be such as would be ordinarily sold in a hardware store furing the holiday season.

An effort was also made to give the window trimmers in the smaller towns and cities an equal chance with their competitors in the larger centres where opportunities are greater for preparing attractive displays, the prizes being divided into two departments. The results were satisfactory, as it was found that the greatest interest was manifested by the hardware clerks in the smaller places.

Halifax Man Wins Prize.

In the cities over 25,000, only two entries were made, both being creditable productions. After much deliberation the prize was awarded to S. S. Wetmore, whose work with A. M. Bell & Co., Halifax, N. S., in recent years has given him an international reputation. Technically his display was not a display of hardware goods. It was a special selling window designed to draw people to the store, and the following extract from Mr. Wetmore's letter shows that it accomplished this in a most satisfactory manner: "Should your competition be for hardware only I suppose you would hardly consider my display in keeping with your conditions, and yet my effort is largely the means of selling not only skates, sleighs and sporting goods, but has brought thousands of customers to the store and has indirectly made many sales. Our street (Grenville) is far behind Barrington St. as an attractive street, consequently we must do something special to draw the shoppers, and I am justified in saying that we have done so as from the time I raised the blind on this display we found it necessary to have a policeman stationed at the door to prevent the crowd from completely blocking the sidewalk."

The display that gave Mr. Wetmore's so close a run for first prize was a splendid arrangement of cutlery and silverware made by Stanley Mills & Co., Hamilton, Ont., and both photos w ll be reproduced in the special spring number of Hardware and Metal to be published on March 28.

An equally puzzling problem confronted the judges in selecting the best out of the bunch sent in by the window trimmers in the smaller cities and towns. Finally the choice was narrowed down to photos of windows in the stores of Johnson & Co., Brandon, Man. (sent by Walter Bate), and Torrance & Kaufman, Almonte, Ont. (sent by Roy Gilmour). Mr. Knight, of Rice Lewis & Son, favored the former, while Messrs. McLaughlin & Vandecar, of the Russill Hardware Company, inclined to the latter. The Brandon window was weak in not having the goods price marked, while the Almonte display could be criticized because much time had been spent in preparing the structure and background and too little effort made to arrange the goods to advantage in the bottom. Finally, it was decided to award the prize to Mr. Bate, giving a special second prize to Mr. Gilmour. Both displays will be reproduced in the spring special on March 28.

Other Commendable Displays.

Amongst the remaining photos submitted were two containing particular merit, the work of H. J. Marshall, with Geo. W. Ecclestone, Bracebridge, Ont., and L. H. Fleischauer, with the Peter Hymmen Co., Berlin, Ont. The former was weak in being a mixture of holiday and staple goods, and the latter, while probably the most beautiful window of all, lacked in selling value and was barred out because it was made beautiful by the too elaborate use of ferns, holly, etc., which could not be considered as hardware goods. Frank O'Neil, with Marks, Clavet & Dobie, Port Arthur; A. R. Auger, with C. F. Comer, Calgary, and R. W. Craigie, with C. C. Lee, Goderich, also forwarded creditable samples of their work, which will be published next fall as suggestions for trims next holiday season.

Other photos received from L. T. Watson, with Wm. Chalmers, Deloraine, Man.; Linton & Hall, Calgary, and W. H. Richardson, Essex, Ont., could not be considered on account of the photos being poor or being received too late.

Advertising Contest Later.

On account of the illness, of W. F. Ralph, advertising specialist, with the MacLean Publishing Company, Toronto, it is impossible to announce this week the results of our Christmas advertising competition. The awards, however, will be announced as soon as possible. The number of entries were very large, while the selling plans contest had to be called off on account of a dearth of interest taken in this department.

A NEW STORE FRONT.

The explosion of 500 pounds of dynamite in a railway car at Essex, Ont., a few months ago shattered thousands of panes of glass and wrecked many store fronts, among these being those of the hardware and furniture stores of W. H. Richardson. The accompanying illustration shows the new front put in the two stores, the explosion having completely shattered the former windows and made it a comparatively easy matter to remove the partition, making a single entrance in the centre and allowing room for two show windows, sixteen feet in length by eight feet in depth.

Part of the New Store Front of Richardson's Store at Essex, Ont.

General opinion seems to favor turning over to the town of Essex the greater portion of the twenty-five thousand dollar fine imposed upon the Michigan Central Railway by Justice Riddell, as compensation for the depreciation in property-value suffered by the corporation.

E. Garvin, who for the last three years has been in the employ of J. F. Dandy, Pierson, Man., has taken a position with W. Hopkins, hardware merchant, Saskatoon, Sask.

HARDWARE TRADE GOSSIP

Ontario.

G. T. Smith, Lewis Bros., Montreal, was in the city this week.

Arthur T. Pennington, hardware merchant, Port Arthur, has sold his hardware business to Charles Brown.

The assets of the Wilcox Manufacturing Co., of Ontario, will be offered for sale by public auction on Jan. 30.

The Bond Hardware Co., Guelph, have issued a very neat schedule for the professional hockey league in Ontario.

O. Zeyd, manager of the Walker Steel Range Company, Grimsby, was bereaved last Saturday by the death of his wife.

John Kohler, Enterprise, has sold his store to Jacob Knechtel for $2,000. The hardware business will be conducted by the former proprietor who has been engaged as manager.

Chas. E. Santo, London Ont., has been appointed Canadian representative of the Wilcox Manufacturing Co., of Aurora; Seidel Manufacturing Co., of St. Louis, and the Minnesota Mining & Manufacturing Co., of Duluth.

The National Wire Fence Company, Merrickville, have decided to remove their interests to Prescott. The reasons given for the move is that Prescott offers a better point for getting in wire from United States, and the cost of transhipping will also be annulled by the move.

The Covert Manufacturing Company, Troy, N.Y., whose prize puzzle appeared in these columns some weeks ago, has been closed. The first and third prizes were won by Canadians, William Hemeyer, Breslau, Ont., taking first, and E. A. Whitten, Bracebridge, Ont., getting third. The Covert Co. intend conducting a second prize puzzle in February.

C. W. Burke, hardware merchant, Burk's Falls, who was forced into liquidation by his bankers, will continue his business. A meeting of creditors was held in Toronto last week, where it was clearly shown that there was a substantial surplus and that the business was on a paying basis. Mr. Burke has received time and will pay 100 cents on the dollar.

The death occurred at Godrich, Ont., this week of one of Ontario's oldest hardware merchants, when R. W. McKenzie, of that city, past away. The late Mr. McKenzie was born in the Gore of Toronto, nearly sixty-nine years ago. After a short time in London, he went into the hardware business in Goderich, about 1870, selling out four years ago to his partner, Mr. Melvin Howell. At first the business was carried on under the name of Kerr & McKenzie, and later by Mr. McKenzie alone. For six years he retired from business, spending part of that time in Teeswater and part of it in the West.

Maritime Provinces.

The Bennett opera house syndicate have completed arrangements for an up to date opera house at St. John, N.B. Building operations will start in the spring.

E. L. Clark, Woodstock, N.B., for many years head clerk for W. F. Dibblee & Son, hardware merchants, of that town, intends to go into business for himself at Woodstock.

The 15th annual meeting of the Kentville, N.S., Board of Trade takes place Tuesday, the 28th inst. The officers for the past year were: Wm. Yould, President; W. P. Shaffuer, Vice-President; A. E. Dunlop, Secretary-Treasurer. Trade has been good in the valley this year, and the outlook is very rosy for the coming year.

Early last spring the premises of the Amherst Foundry Co., Limited, Amherst, N.B., were destroyed by fire. Rebuilding was, however, started without delay, with the result that the output for 1907 was practically equal to that of 1906. The machinery in the shops is being worked by electricity, supplied by the Maritime Coal, Railway & Power Co., Chegnecto. The company manufactures enamel, stoves, furnaces, etc., and the company is known as one of the largest in the Maritime Provinces.

Shaw & Mason, Limited, Sydney, N.S., have experienced considerable growth since the company was reorganized early last year. The company has recently moved into its new quarters and have added an iron foundry, brass and machine shops to the business, in which brass and iron castings, sheet metal roofing, tinware, enamelware, etc., are turned out. In addition, the company are engaged as general hardware jobbers. Among the contracts recently completed by Shaw & Mason was a complete system of steam heating at the I.C.R. shops, Charlottetown, P.E.I.

Quebec.

J. Isbister, of Isbister & Son, Saskatoon, is in Montreal on a visit.

R. W. West, formerly of the claims department of Lewis Bros., Montreal, has returned to Halifax in charge of the retail department of Wentzells.

C. E. Hall, of Linton & Hall, Calgary, has been visiting Montreal. He speaks very hopefully of trade, not only for the spring, but for many years to come.

The Canadian Fairbank, Montreal, hockey club, has been organized for the present season. The Hon. President is H. J. Fuller; Hon. Vice-Presidents, Thos. McMillan and E. R. Whitehead; President, C. M. Rudel; Vice-President, Graham Drinkwater; Secretary, S. Thomas; Treasurer, H. L. DeWolfe; Manager, R. H. Hobson; Committee, McKeowan, S. S. Reck and M. Davidson. The club expects to have a strong team on the ice.

The employes of Lewis Bros. have organized a snowshoeing club, and much enthusiasm is being taken in the affair. The opening tramp to Cote des Neiges was very successful, and the next one is being eagerly anticipated. O. A. Sauviat has been elected captain, and he is supported by a committee known as the "Jolly Seven," comprising the captain, E. Bouret, J. Marien, A. Gravel, H. Hutt, D. S. McGregor and E. Westlake.

Francis Baird, a prominent general store merchant and brick manufacturer, of Ormstown, Que., is dead at the age of 74, after an illness lasting only a few weeks. For many years Mr. Baird was Mayor of Ormstown, and at the time of his death was a member of the Town Council. He received his education in Montreal, Beauharnois and Detroit, Mich., and in 1855 entered business in Ormstown. The fine firm of Thomas Baird, Son & Co. is a monument to his ability.

As the result of a resolution passed at a recent meeting of the Montreal Metal and Hardware Association, published at the time in The Hardware and Metal, circulars have been sent to all members of the Montreal Board of Trade as to the desirability of forming a transportation bureau. The proposal involves the appointment of an expert in transportation whose services would be available to all subscribing members on individual difficulties with the railways, and for the general purpose of protecting the transportation interests of Montreal. The circular states that the advent of the Railway Commission has given opportunities to other centres of trade, alive to the advantage of expert representation before the Commission, to secure from that body advantages not enjoyed by Montreal. It was, therefore, desirable that the interests of the city should be looked after by an expert. It is estimated that the cost of maintaining the transportation bureau would be about $5,000 per anuum.

Western Canada.

D. Smith, of Cook, Potts & Smith, Regina, was a visitor to Winnipeg last week.

Jas. McNaughton, Killarney, Man., has sold out his hardware business to W. F. Ramsay & Sons.

Among the hardware merchants calling on Winnipeg jobbing houses last week were J. Isbister, Saskatoon: R. F. Nethercutt, Wawanesa, and Mr. Birch, jr., of Birch & Son, Roland, Man.

F. McKnight, of McKnight & Frost, plumbers and steamfitters, Edmonton, was in Winnipeg last week calling on several supply houses. He reports business prospects in the Alberta capital good.

United States.

The Union Metallic Cartridge Company officially states that no authority has been given from any one connected with the company to make the statement that the works of the plant of the Remington Arms Company would be removed from Ilion, N.Y., to Bridgeport, Conn., where the Union Metallic Cartridge Company's works are located. The report has received wide newspaper circulation.

AN OBJECTIONABLE FEATURE.

The new Co-operative Bill, now before the House of Commons, which is dealt with at greater length elsewhere in this issue, and which, by the way, seems to be very favorably regarded by the solons of the house, contains one feature which ought to be opposed by retail and wholesale merchants generally. We refer to the clause which allows the registration of co-operative concerns for buying and selling in opposition to the law regarding the formation of companies for the same purposes.

As the law stands now, two parties can combine in a business and are compelled only to register the amalgamation at a nominal fee. When a larger number wish to unite, however, a joint stock company must be formed and procedure on this basis necessitates considerable expense.

On the basis proposed by the new bill a number of persons uniting in a co-operative society, be it for the same purpose as those for which the joint stock company was formed, need only go through the process of registration as mentioned in the other case.

While it is true that conditions existent in Canada seem to militate against the success of the co-operative movement, as applied to supply stores, at least, and while the history of such movement here shows no example of progress, this point in the bill seems to offer an unfair advantage to such societies as against those engaged in the regular wholesale and retail trade, and is one that should be guarded against.

Any opposition which has been raised against the bill up to this point seems to have made little effect. It will require more united effort to make the house feel the necessity for an amendment. Why should not retailers and wholesalers in every municipality in Canada bring the matter before their boards of trade, press for concerted action and in this way bring one of the mightiest influences possible to bear on the situation? This seems to us the most advisable course of procedure.

SOME NEW YEAR'S ADVICE.

The following paragraphs. clipped from a recent issue of the Peterboro Review contain some advice which can be applied with value to all lines of business.

"In St. John's Church, on Sunday evening last, the rector, Rev. Canon Davidson, made an appeal to his congregation—as is his custom on the first Sunday in each new year—to settle all their small bills, and larger ones, too. He strongly advised his hearers to wipe out all obligations and commence 1908 with a clean slate. The admonition is certainly opportune and apropos, and if lived up to would result in a more pleasant and satisfactory order of things all around. If merchants and others are kind enough to extend credit to you, do not abuse this privilege and keep the one who has obliged you waiting month in and month out for his money. If the business man does not receive a settlement from his customers, he is not in a position to pay the wholesale house, and the wholesale house cannot square up with the bank. An irksome and undesirable state of affairs is thus created, throughout the whole medium of trade and business relations by certain people well able to discharge small debts neglecting to do so. Do not procrastinate. Your bill may be small, but when several such amounts are owing the merchant, in the aggregate they total a large sum. It is well in these matters just to sit down and think.

"Do unto others as you would be done by and consider that if you were a merchant would you not sincerely wish all people to settle up with you. Now, carry this thought into action and practice. Business would lose one-half of its terrors, disappointments and drawbacks if customers at the beginning of each year would make an honest, earnest effort to liquidate all indebtedness. If you cannot do so entirely, do so in part.

"Canon Davidson's appeal is timely and much needed. It evidences an appreciation of business conditions too rarely referred to from the sacred desk, and reference to which will not be viewed by all good citizens other than in the light of excellent judgment and sound, practical, common sense."

OPTIMISM OF TWO KINDS.

Optimism is the feeling which is breathed and practised by that class of people who take a cheerful view of their surroundings and who believe that what inconvenience they are put to in the present will be speedily removed.

There are two kinds of optimism, however, that of experience (for example, the successful merchant), and the optimism of ignorance (for example, the apparently successful man who follows any lead offered and believes all he is told without the effort of thinking out problems for himself).

The former studies the needs of his business in the three tenses. He profits by past experiences, corrects them to date and lays carefully prepared plans for the welfare of that business in the future. In doing this the experienced optimist absorbs knowledge from all sources and pays particular attention to the progress made in similar lines, which are mapped out for him in the columns of his trade journal. In this manner the successful merchant not only improves his business, but at the same time he unconsciously improves his understanding, gleans numbers of valuable facts about the needs of his country and the people to whom he looks for business, which cannot fail to make him feel that a trying situation like Canada has recently experienced, can only last for a very short period.

The man inflated with the optimism of ignorance, on the other hand, attends the theatres, gives extravagant house parties and wears expensive clothes. Generally, he is considered a successful business man. Perhaps he also subscribes for a paper devoted to his business, but, as a rule, he does not take kindly to advice which might put him in the way of increasing his business. He will often offer the views of some brainier men, which he has read of in the daily papers. This kind of optimism is but one degree above the viewpoint of the pessimist, for he, allusioned though he certainly is, looks into the corners everywhere for something to find fault with, and unhappily for him, he surely finds it, or, what amounts to the same thing, he thinks he does.

As pessimists may be made out of ignorant optimists, readers should examine themselves. the methods of their business, study the trade reading matter prepared by trained men, and develop a true feeling of experienced optimism, which in each case is bound to help in building up a successful business and also have its influence for good in times of financial excitement such as Canada has recently experienced.

THE SITUATION IN THE WEST

By our Special Winnipeg Correspondent.

There has been little or no change in the wheat market, although prices have lowered slightly towards the end of the week, with a tendency to higher levels at the very end. The demand for low-grade wheat continues and the forward movement has been large and steady. The weather is simply perfect for grain movement, there having been but one slight storm during the week.

The wholesale trade report a fair return in the matter of collections and retail trade is quite as good as is usual at this time of year. The entire west is regretting the destruction of the splendid mill of the Maple Leaf Flour Mills Co., at Kenora, which was opened for business with so much rejoicing only a month ago.

During the week the annual meeting of the Manitoba Grain Growers' Association convened at Brandon and held a three-days' convention with three sessions daily.

In as much as agriculture is the chief business of the west and wheat growing the line of agriculture most generally followed, the deliberations of the body representing an active membership of over 4,000 farmers is a matter of importance to every business interest in the west. So near to a general election the deliberations become of even more significance, as practically every member of this association is a voter.

This is the body responsible for the drafting of the amendments of the charter of the Grain Exchange, which is now awaiting a final reading. The association has many wise heads in it and not a few of the demagogue type, and the latter, as is so frequently the case, exercise an undue influence in the findings of this body at their annual meetings. The matters taken up this year, which are likely to have a far-reaching influence, were the questions of Government-owned elevators and the establishment of a sample market at Winnipeg.

The scheme of elevator ownership which they propose, is that all the terminal elevators shall be owned by the Dominion Government and all interior elevators by the Provincial Governments of the various provinces. The Provincial Government of Manitoba has already been approached in the matter and stated that they had not the power owing to the weighing and inspections systems being in the control of the Federal authorities. This first refusal has not daunted the Grain Growers in the least and at their recent meeting it was pointed out that the necessary power could easily be obtained by the Provincial Governments from the Dominion. The idea they have in connection with interior elevators is an elaborate one. It plans for nothing less than the special binning of the entire crop of the west and having samples drawn from each load as it is hauled to the elevator and these samples mixed together and large bulk samples sent forward for grading. The official grading is to be done on this sample and then the farmer is to be in a position to borrow money on the wheat in his special bin in that elevator and hold his wheat for sale until such time as he or his agents shall deem the market at its best. The Grain Growers plainly state they wish, if possible, to eliminate the street buying of wheat altogether. If the man with wheat in special bins wants to sell on sample, a portion of the sample taken in the way already indicated is to be placed in a sample market in Winnipeg. One of the advantages claimed for the system is that it will put eastern millers on an equality with western mills that own a line of elevators at the present time, as the western, as well as the eastern millers, will be obliged to buy in the Winnipeg sample market By way of forcing the present line elevators to part with their houses, the proposal is that a valuating commission shall be appointed to value all elevators at present in Manitoba, the Government shall then give the owners the option of selling at the valuation made or of having Government elevators erected to run in opposition. There is no manner of doubt that the present Legislature of Manitoba is going to be strongly pressed in this matter and with the big majority of the Government in the House, and the precedent of the Government purchase of the telephone system, it is quite among the possibilities that their request may be granted. The matter is a very serious one. Without for a moment criticizing the wisdom or practicability of such a scheme, the entire upset that would ensue from such a radical change in the present method of handling grain would be very likely to prove injurious to our export trade, which, when all is said and done, is the important trade to the Canadian west. The British dealer above all things hates change and conditions out of the normal. He is well satisfied with the method of grading and the shape in which cargoes are sent forward and will view any change with suspicion and dislike.

A large section of this convention was in favor of the immediate opening of a sample market in Winnipeg, and many others who thought the sample market would only be desirable when the interior elevators were in Government hands. It is noteworthy that the Royal Grain Commission in their report were strongly opposed to the sample market, mainly on account of the mixing elevators that would necessarily follow and the danger of the grades skinned and the reputation of western wheat thereby damaged in its ultimate market as would be almost sure to be the case. The representatives of the Saskatchewan Grain Growers' Association and the president of the Manitoba Grain Growers were both strongly opposed to it.

Very strong resolutions were passed condemning the banks for their action in withholding lines of credit and refusing to advance on bills of lading, thereby occasioning enormous loss to the farming community. There were several resolutions of a very drastic nature brought forward in the way of proposed amendments to the Banking Act.

The question of car distribution over which there has been so much discussion, was up, and it is evident that any attempt to amend that clause so as to get a more equitable share of the cars for elevators will meet with the most strenuous opposition from the Grain Growers' Association, who absolutely and unreasonably refuse to see that in clinging blindly to this bit of legislation they are seriously damaging the chances of the small farmer, who must sell to the elevators.

As was stated in the earlier part of this article, the deliberations of this body are of importance to all engaged in business, from the very fact that they have become a strong political factor and their power of good or evil along the line of disturbing well-established trade relations is unbounded.—H.

TO REVIVE MONTREAL EXHIBITION.

Renewed efforts are to be made to revive the holding of annual exhibitions in Montreal. At a meeting composed of representatives from various local commercial organizations, as well as for the Canadian Pacific and Grand Trunk railway companies, held at the Chambre de Commerce, the advisability of such an enterprise, backed by the city as in the case of Toronto, was discussed, and it was decided to request the board of management of the Montreal Industrial Exhibition Association to take whatever steps are deemed necessary to bring the fair into existence again.

The association was voted a subsidy of $10,000 by the city council a couple of years ago, and was promised a grant of $5,000 by the provincial government, but it was unable to go on with the project, because no arrangement could be arrived at as to the site.

Ex-Mayor Laporte, one of the vice-presidents of the association, stated that the organization possessed the requirements necessary for making the holding of an annual fair in Montreal a success, providing it received the support, both financial and moral, of the city council. All that would be necessary would be to take up the work where it had been left off two years ago.

A letter was read from the board of trade, stating that the question had been considered by the organization, but that owing to lack of proper encouragement from the city council, there was nothing more to be done.

Amongst those who spoke in favor of holding the fair were : Dakers Cameron, secretary of the Montreal branch of the Canadian Manufacturers' Association, and President Boivin and Secretary Beaudry of the Montreal branch of the Retail Merchants' Association.

FIREPLACES AND TILING POPULAR.

In the illustration showing one of the new windows in W. H. Richardson's store at Essex, a fireplace is shown at one end, another striking feature being the screen made of horse whips. This draws attention to the increasing popularity of this line as a money maker for hardware merchants who make an effort to secure the building and house furnishing trades.

Tiles go along with fireplaces, naturally, and as there is a good margin of profit to be secured on them, and as the manufacturers supply patterns to follow in laying them, more hardwaremen will undoubtedly take up the line in future. As usual, also, the dealer who takes up the line first will secure the bulk of the trade.

Markets and Correspondence

(For detailed prices see Current Market Quotations, page 68.)

MARKETS IN BRIEF.

Montreal.

Copper—Firm at 15c.
Tin—Steady at $32.
Lead—Unchanged.
Spelter—Same quotations.
Nails—Cut of 5 cents per keg.
Bldg. Paper—Temporary Revision of list.

Toronto.

Copper—Unchanged.
Tin—Improving.
Lead—Strengthening.
Wire Nails—Unchanged.
Building Paper—Price has declined.
Turpentine—Advance of 5 cents.
Linseed Oil—Unchanged.

MONTREAL HARDWARE MARKETS.

Montreal, Jan. 24.—Orders are now coming in more freely, especially from the east, the absence of snow troubles on the railroads having enabled travelers to reach their clients from the first of the year, The quantities up to now are still on the small side, but this is only to be expected, in view of the spirit of caution that pervades the country. Jobbers are quite satisfied to get a steady demand to start with, knowing that it must develop in bulk as the trade of the country becomes more active. It is not anticipated that the full force of the spring shipping will be felt until March, which is somewhat of a contrast with last year, when delivery was in progress in January. There is little doubt that the leeway will be made up before many months are over. A number of factories, helped in a great measure by the slackening of the demand, are piling up stock, and by the time the full rush is on will be in a good position to complete orders in all lines. In bolts, for instance, makers' stocks are now well assorted. Carpenters' tools, plumbers' supplies and also kitchen utensils are commencing to move.

American manufacturers are issuing a new list on builders' hardware, and jobbers have been notified of the fact. Nails have been shaded again, but prices otherwise are unchanged.

Railroad Supplies—Construction work still being maintained, a steady demand exists for rail track bolts, ties, hammers, crowbars, blasting powder, drill steel and rock drills. Prices are unchanged.

Builders' Hardware and Supplies—Orders, although not heavy, are increasing, and a fair demand is likely to set in before long. American manufacturers are issuing a new list of prices, but the nature of the alterations is unknown, owing to the figures not yet arriving.

Nails—There has been a further cut in nails, and we now quote $2.30 per keg. There is a heavy stock in the market, and holders are trying to stimulate the demand. When construction work commences again the prices will probably stiffen.

Bolts and Nuts—For railway construction work, bolts and nuts are moving freely, but other lines are rather lifeless. Prices maintain their firmness.

Lumbermen's Supplies—The demand is moving slowly in axes, cant hooks, chains and calks. An improvement is expected shortly, but the prospects for an average call are not favorable. Prices are unchanged.

Building Paper—A temporary revision has been made of the price list. Tarred felt is now listed at $2 per 100 lbs.; dry sheathing at 32c per roll, and tarred sheathing at 40c. Pitch is now 75c per 100 lbs. The full list will be found under our market quotations. Trade is quiet, and is not expected to open up before March. Manufacturers are busily engaged in filling up stocks.

Shot—Orders are being received for sorting-up on the heavier sizes. The demand is fair, and a satisfactory season is anticipated.

Screws—The quietness of the last few weeks has been broken, and orders for spring delivery are beginning to make their appearance. Although makers have been trying hard to catch up with back orders, they have not yet succeeded, and if the demand assumes normal proportions later in the year, there will again be a shortage to contend with.

TORONTO HARDWARE MARKETS.

Toronto, Jan. 23.—The condition of the hardware market continues to improve, summed in the words of a local authority who remarked that "stocks in many cases throughout the country are very low at present owing to the cautious buying which marked last fall's trade and as a result stocks are much lower than at this time last year." If this report is correct it will tend to tide business through February which is usually a very dull month with the hardware jobbers. Booking for spring delivery is steady and collections are easier in Ontario than for some months. The absence of snow has affected business this year and as a result many merchants will have to carry a large percentage of their winter lines over until next year. The business now coming in may be described as normal and though not as great as at this time last year, prospects for a good strong demand in all spring lines continue to be bright.

There have been no changes of note on the market during the week.

From the West reports continue to be optimistic, there will be a large amount of building done during the year and this will necessitate the use of a large quantity of hardware. On the whole, jobbers are pleased with the business coming in and if orders continue to increase at the present rate a satisfactory year is sure to result.

The Kerr Engine Company, Walkerville, have issued a new price list showing increased discounts on their values which may be ascertained by looking up current quotations at the back of the paper.

Rope—Since the recent drop no further change has occurred in the price of rope. Booking for fall delivery has received a start and orders are beginning to arrive at a satisfactory rate. We now quote British manila, 11c a lb.; pure manila, 14c a lb.; sisal, 10c a lb.

Poultry Netting—Since the new lists have been issued business in this line continues to improve, the booking for spring delivery is about over and stocks will be delivered during March. No further change has occurred since the publication of the new lists. We still quote the same discounts, 60 and 10 per cent. off.

Builders' Hardware and Supplies—The demand for carpenters' tools, masons' tools and plumbing outfits of all descriptions are on the increase, though a normal demand has been noticed all winter owing, no doubt, to the mildness of the weather, which has permitted mechanics to work out doors for some weeks. There has been no changes in the price of these goods of any account.

Lawn Mowers—A normal January business is being booked for spring delivery. Prices remain firm.

Shot—Shot remains unchanged, discounts continue to be 20 per cent. with little prospect of a further change. Some booking for spring and future delivery is being done.

Copper and Brass Goods—These lines are in some cases being cut, an indication that a reduction is about to overtake the market. A steady demand exists at present and there are prospects of a good business in futures. Copper pitts are still quoted at 30 per cent. off list and tea pots remained a discount of from 38 to 45 per cent. off list.

Bolts and Nuts—The demand is steady and the market remains firm. Booking for spring and summer delivery is beginning to come in. There has been no change in prices, quotations remaining at 75 per cent. off list.

Screws—The demand is commencing to revive in a satisfactory manner, booking for future delivery being the order of the day. Quotations remain 85 and 10 per cent. on flat styles, and 80 and 10 per cent. off round styles.

Solder and Soldering Irons—Prices remain unchanged. Quotations remain ½ to 2-pound irons are quoted at 40 cents, over 3 pounds at 37 cents. Solder has not changed any during the week, remaining at 20 cents.

Sporting Goods—The unseasonable winter has made a considerable difference in the sporting goods trade, and though large amounts of these goods have been turned over stocks in this vicinity are not nearly cleared out.

Guns and rifles will be a shade higher this year owing to the increased cost of labor and material.

Nails—The low figure quoted in the East is not followed in Toronto, but reports of a drop are being circulated. We still quote $2.45 per keg.

Building Paper—The price lists of building paper have been revised, a decline being shown on several items, including felt, ready roofing, sheathing, tar and pitch.

MONTREAL METAL MARKETS.

Montreal, Jan. 24.—It is evident from the maintenance of last week's prices in face of the increasing strength of the foreign markets, that merchants are endeavoring to establish a firm basis to the local markets. This is a wise move, and will tend to increase the confidence of the buyers. So long as prices fluctuate with the slightest gradation in the primary markets, so long will there be a continuance of that holding off disposition which has characterized the demand. Vacillating movements are signs of weakness, especially in the circumstances which have recently prevailed. We doubt whether there would be any material stimulation to the buying by a boosting of prices, for users would be the first to recognize the possibilities of a subsequent fall, and to wait for it. Steady progression is the best policy to be adopted now.

The first and foremost consideration in a reviving market, after such a crash through which the metals have gone through, is to produce stability, and stability can only be brought about by a circumspect regulation of the figures. A convalescent person requires watching to see that renewed vigor does not induce an overtaxing of strength. So it is with the markets at present. Establish a firm basis so that the chance of a reaction is reduced to a minimum. Progress in this way will be unchecked, and the great factor of confidence—the factor on which a steady demand depends—will be given to the markets. The demand generally shows signs of increasing, and maintains that steadiness which is the best hope of future strength.

Copper—This metal continues to show signs of growing strength under a quiet, but persistent demand. There has been an advance in the Old Country of two shillings and sixpence during the week, and the market is now quoted at £63 12s 6d. In New York the ruling price is still around 14c, and the belief is growing that the market is slowly working to a 15c basis. We still quote copper 15c, locally, under a growing demand.

Pig Iron—The English market maintains its drooping tendency, but the reduction of 6d this week is not of very great moment. Under the influence of spring orders, which will not be made until the end of February, the market will probably turn again. The sagging movement will, no doubt, continue up to then. We now quote Cleveland warrants 47s 9d. Locally, steel maintains its firmness, and the demand is improving. Buyers have probably come to the conclusion that it is useless waiting any longer for a cut. We quote: Middlesboro No. 1, $21.50; No. 3, $20.50; Summerlee, $25.50.

Ingot Tin—There was a slight drop in the English market during the week, but in the last day or so prices regained their strength again. It cannot be said that firmness has yet been established in this market, although demand is an increasing one. Prices have not been affected here, and we continue to quote 32c.

Lead—Lead has advanced 5s in the English market during the week, and is now quoted at £14 12s 6d. Despite this advance, however, and the brighter outlook, no corresponding increase has been made here, and we still quote 4½c.

Antimony—There is no change in the local market, although Cookson's has advanced £2 a ton in the English market. Prospects are very much brighter than they were, and buying for futures still maintains strength.

Spelter—Spelter is now quoted $4.50 to $4.55, East St. Louis, and further advances are expected. The same improvement is noted in the English market, which shows an advance of 17s 6d over last week. The prudent course followed by the producers in curtailing output is thus bearing fruit. The demand is increasing, and conditions are very favorable. Local prices are unchanged.

TORONTO METAL MARKETS.

Toronto, Jan. 23.—A fair business in small lots is reported locally, buying generally being light with consumers working down their present stocks, feeling that they can replace them later on at prices as low as at present if not better. Booking of sheet metals for spring importation is now well advanced, however, the recent reduction in prices of tin plates, etc., having encouraged this branch of trade, the volume of which is considered satisfactory by the jobbers.

Iron—Consumers of iron continue to show little interest in the market for future delivery, as business offering for finished castings has materially declined and business in hand is covered by present stocks. Furnace men and merchants are maintaining prices, however, though willing to make some concessions for present business. We make no change in our quotations of $22.50 for No. 2 Canadian iron and $21 for No. 3 English. Bar iron is held firm at $2.20 net, although an open market exists in the States. Cutting in wire nails indicates a tendency to lower prices on the finished lines, although mill men are understood to be tied up with the furnaces for supplies of rods at prices which do not allow a reduction.

Ingot Copper—Easier money is encouraging speculation abroad and this tends to increase business. Prices have been lowered in London, however, the market locally continuing at 15 cents. The exports of copper to Europe continue large but it would seem impossible for this to continue much longer. European consumers, differing from American, are not so tied up to the banks, not having to spend such vast sums to build and increase the size of their plants. They have the ready money to buy and have been taking advantage of the rock bottom prices to fill their warehouses. When stocks are built up, however, this export trade will have to fall off, the natural result being a depressing influence on a market which may then be tending upward. It is evident, therefore, that there is nothing to indicate higher prices for copper for some time. With a falling off in demand in America, there may even be a shading of present prices, though some look for present prices to be maintained.

Ingot Tin—The market holds firm at $31.50 with a fair demand. A common belief is that the longer tin holds steady near its present level the less likelihood there is of the sharp slump expected by many who have been figuring on the overstocking of the Chinese syndicate. Inquiries for future business are being made in sufficient numbers to encourage an optimistic belief in the future of tin.

Pig Lead—Higher prices are quoted in London and while this makes the local market stronger, the local price is unchanged at $4.35 to $4.50.

Spelter—A better demand exists and prices are firming up. The improvement is general, an advance being quoted in both Europe and America. Locally, we still quote: Domestic, $5; foreign, $5.25. Sheet zinc in casks is quoted at $7.

Antimony—Lack of demand prevents any change in prices, 11 cents still being quoted.

Old Materials—Buyers report the demand inactive and their quotations are necessarily low. No metal shows any life, all scrap being a drug on the market.

LONDON, ENG., METAL MARKETS.

London, Jan. 21.—Cleveland warrants are quoted at 47s 10½d, making prices as compared with last week 6d lower.

Copper—Spot copper opened easy at £63, futures at £63 12s 6d, and after sales of 500 tons of spot and 700 tons of futures, closed easy at £62 15s for spot and £63 5s for futures, making price as compared with last week £1 2s lower on spot and £1 lower on futures.

Tin—Spot tin opened easy at £125 5s, futures at £126, and after sales of 70 tons of spot and 350 tons of futures closed easy at £124 15s for spot and £125 10s for futures, making price as compared with last week 17s 6d lower on spot and 15s lower on futures.

Lead—The market closed at £14 10s, making price as compared with last week 2s 6d higher.

Spelter—The market closed at £21, making price as compared with last week 15s higher.

A strong pull together means more for both house and salesman. In a tug of war the house will win from the salesman, but both will lose with the customer.

Quebec and Maritime Provinces

Important Invention at St. John—Un seasonable Weather Has Affected Trade in Halifax—News of the Steel Industry at Sydney.

HALIFAX.

Halifax, N.S., Jan. 20.—Trade conditions show little change since last week and prices are fairly steady throughout the list. The absence of snow throughout Nova Scotia has had rather a depressing effect on business, particularly on lumbering operations, which, however, are not suffering to any great extent as the output this season was to be largely curtailed owing to the condition of the European markets. The travelers now out are doing fairly well.

* * *

An expert rail maker employed at the plant of the Dominion Iron & Steel Company, in a recent interview, stated that in his opinion the big works were never in better condition for production purposes than at present. Every department is working along smoothly and in splendid style. The skilled artizans engaged in the mills are the best that can be had in America, the wages paid are above the average, the workmen are content, and with such a healthy state of affairs existing, the prospects for the future are of the brightest. The rail mill is at present working on a ten thousand ton order for the Grand Trunk, and if the pace of the past is kept up to the full order will be delivered inside of a couple of weeks. The inspection of the finished rails by the inspectors during the past year has been most rigid and the tests applied as to strength the most strenuous known. From each heat of steel of fifty tons taken from the open hearths a rail is selected haphazard and placed on two pedestals four feet apart. A five hundred pound weight suspended overhead at a height of from fifteen to twenty feet is allowed to drop on the unsupported section of the rail, and should the steel stand the impact, the heat is declared "O.K." This is known as the physical test, and during the past three months there has not been a heat that has not met and withstood the test.

* * *

The full bench of the Supreme Court last week delivered judgment in the appeal case of the Dominion Coal vs. the Dominion Iron & Steel Company, in the latter's favor on all points. The court holds that the contract is still in force, and clearly expresses the intention of the company.

The coal rejected by the Steel Company was not suitable for its purposes.

The Coal Company having coal in the Phelan seam suitable for steel making and coal not suitable, is bound to supply the former.

The Steel Company is entitled to damages equal to the difference between the contract price and the market value of all coal used by it since the breach in November, 1906. The Coal Company will have to carry out its contract and supply coal from the Phelan seam suitable for steel making, for the balance of the term of ninety-nine years.

The above are the principal points agreed upon by the five judges composing the court, which included the Chief Justice of Nova Scotia.

* * *

The Annapolis Royal Board of Trade has elected the following officers for the ensuing year:

President—A. E. Atlee.
Vice-President—Geo. E. Corbitt.
Secretary-Treasurer—F. C. Whitman.
Council—H. A. West, A. D. Mills, F. W. Harris, J. M. Owen, Dr. Magee, W. H. Clarke, E. B. McDaniel, Samuel Riordon.
Auditors—F. W. Harris, F. Leavitt.

* * *

Halifax merchants are up in arms over the action of the Canadian Pacific Railway in sending the steamer Corsican to St. John, N.B., with 750 tons of cargo, which they claim should have been landed at this port. The Corsican arrived on Sunday afternoon from Liverpool, and after discharging the Canadian and Oriental mails, she was ordered to proceed to St. John to unload. Of her 3,500 tons of cargo, 750 tons was billed to be landed here. Of this amount, 200 tons were for Halifax merchants, and the balance for Quebec, Montreal and Toronto firms. The local men claim that as a result of the action of the C.P.R. they will be kept a week without their goods, as they will have to be re-shipped back by rail, and they also say that the Upper Canadian firms will be without their goods several days longer than is really necessary. No explanation is given by the C.P.R. regarding their action. The Board of Trade will take the matter up with the company and also with the Government.

ST. JOHN.

St. John, N.B., Jan. 21.—Business continues very quiet. Many of the dealers are still busy taking stock and until this has been finished they will not enter very actively in the pursuit of orders. There have been no changes in prices. There is a feeling among the hardwaremen in common with others, that business will be rather quiet for some little time to come. No great depression is looked for, but just a period of conservative buying sufficient to supply immediate needs.

* * *

General sorrow was expressed at the death of Mrs. George W. Fleming, wife of one of the proprietors of the Phoenix Foundry, which occurred at her home here Wednesday, Jan. 15.

* * *

W. H. Thorne & Co., hardware merchants, have taken over the business of C. E. Colwell & Co., fish and coal dealers, and will hereafter conduct the business. The transfer is the result of assignments made by C. E. Colwell & Co. to W. H. Thorne & Co.

* * *

J. & T. Jardine, of Rexton, have sold their sawmill and all their lumber land in this county to A. J. Curran, West Branch, and Frank Curran, of Bathurst.

* * *

The export of deals from this port to transatlantic ports last year shows an increase of almost 20,000,000 feet over that of 1906, and over 48,000,000 feet above that for 1905. The total shipments for 1907 were: Spruce, 203,804,-181; birch, 6,287,842; birch timber, 2,-820. In 1906 the shipments were: Spruce, 183,921,251; birch, 7,658,234; birch timber, 4,507.

There was also a shipment of 55 tons of pine timber during the past year.

The lumber shipments from Dalhousie for the year were 18,888 tons, forwarded in twenty-one vessels.

* * *

Grain shipments through the port of St. John will this year exceed all previous records. Up to the present time over 2,000,000 bushels have gone forward to the United Kingdom and contracts have been made by the railway companies for more than 6,000,000 bushels up to the first of April. In almost every department of winterport trade there is an advance over last year.

* * *

William H. Stirling, a St. John man, has secured a patent for a new boiler injector invented by him. The patents are offered for sale by H. R. McWeelon, of this city.

"The objects of the invention are to simplify the construction of an injector, and so arrange the parts that the turning of the handle of the main valve stem will cause all operation of the several parts to act in proper sequence, whereby the valve may be operated by a single motion, to provide means whereby the overflow valve will close automatically under steam pressure, and be retained in position by suitable means, to provide means by which the heating of the injector may be carried out, without any interfering with the work thereof, and in which breaking off of the feed current, due to leakage, through the overflow valves, may be prevented; further objects being to render the device of such a character that it may not be easily tampered with, to break the continuity of the feeding current and to provide means whereby the heating of the injector may be carried out independently and without interfering with the operation thereof."

The Locomotive & Machine Company, of Montreal, have changed their name, and in future will be known as the Montreal Locomotive Works. At a recent meeting of the company it was reported that the capacity of the undertaking was now three hundred locomotives a year. A new building has just been completed at Longue Pointe, Que., and it will be used as an erecting shop. An Ernst system of lighting is being installed by the Canadian Westinghouse Co.

Reported by Ontario Correspondents

London Factories in Full Operation—Co-operative Act Criticized by Chatham and London Merchants—Annual Banquet of Canadian Manufacturers' Association at Hamilton.

HAMILTON.

Hamilton, Jan. 22.—There was an important gathering of the members of the Canadian Manufacturers' Association in this city on Thursday of last week. The regular meeting of the association executive was held in the Board of Trade rooms in the afternoon and in the evening the annual banquet was held at the Hotel Royal. There was a large gathering of local and outside manufacturers and a very pleasant evening was spent. A number of very useful addresses were given and a presentation was made to Harry Cockshutt, of Brantford, past president of the association. On behalf of the association Senator Rowland ,of Montreal, presented the Hamilton Commercial Club with a brass plate commemorative of the fact that the club was opened by the manufacturers on the occasion of a special visit to the city some time ago.

The executive at its meeting decided to establish a tariff department, in charge of an expert tariff officer, whose duty it will be to investigate all the grievances brought to the attention of the association. Those who have points of merit will be handled by the association, but manufacturers who clamor for a higher protective tariff and who are unable to substantiate their claims, will be denied the support of the association in any representations they may make to the Government.

Owing to the fact that there is a slump in the labor market in Canada at present, it was decided that the services of a representative of the association in London Eng., for the purpose of supplying the members with skilled help, was no longer necessary and the office will, therefore, be discontinued. The subject of holding a public demonstration in favor of technical education, was discussed. For some time the association has been conducting a campaign among the provincial premiers with a view to enlisting their support of a petition to the Dominion Government for the appointment of a commission of enquiry in technical education. All the provinces except Quebec expressed approval of the movement and promised aid, but the above mentioned province promised not to put up any opposition to the movement. As it was understood that Sir Wilfrid Laurier had stated that the Government was unable to accede to the request of the association, at present, the meeting decided to take no action but it is likely that a public meeting may be held and a number of prominent speakers from the United States secured to speak on the subject of technical education.

The meeting decided to press the Government for the appointment of a trade commissioner to New Zealand to relieve J. E. Larke, who has too much territory to cover at present.

Robert Hobson, of this city, vice-president for Ontario, presided at the banquet which was given by the local branch of the association in the evening. Senator Rowland, the president of the association was present for a short time but as he had to catch his train he made a brief speech and also made the presentation of the brass plate to the Commercial Club. He was given a hearty send-off. Cyrus A. Birge, of the Canada Screw Company, proposed the toast, Agriculture and Canada, which was responded to by C. C. James, deputy Minister of Agriculture for Ontario. The speaker dwelt upon the constantly increasing connection between the interests of the farmer and the manufacturer and the different ways in which their interests compared.

James L. Hughes, public school inspector of Toronto, responded to the toast of Technical Education. He compared the methods and results of the system of instruction in technical education in America as compared with Germany and gave the latter the credit of being the better system. He dwelt upon the moulding of the lives of the young, physically and morally and drew a striking picture of the difference in the number of criminal prosecutions among those who tilled the soil and those who were engaged in manufacturing trades in the city. Of course the latter were in the majority and he accounted for this by the fact that the agriculturalists obtained many lessons from their close association with nature.

The presentation to Harry Cockshutt, of Brantford, in recognition of his services to the association, as president, was made by R. J. Whyte, of Smith's Falls. It was a beautiful water color entitled, Passing Clouds. He accompanied the presentation with a neat speech and the recipient made a feeling reply.

Among the out-of-town guests present besides those already mentioned, were: S. W. Ewing, chairman of the Montreal branch; A. W. White, chairman of the threshing machinery committee; F. E. Leonard, chairman of the engine and boiler committee; G. F. Beer, Toronto, chairman of the reception committee; E. Freyseng, chairman of the Toronto branch; W. R. Dunn, chairman of the railway and transportation committee; Alex. Saunders, Goderich; D. Wilson, Collingwood; J. S. Fluery, Aurora; J. A. Coulter, Ingersoll; R. Scarf, Brantford; W. A. Stroger, Toronto; R. McIntosh Toronto; W. H. Rowley, Hull; and E. G. Henderson, Windsor.

The F. W. Bird Paper Company, have taken out a permit for an addition to their plant to cost $3.700. The structure will be of frame.

* * *

John Milne, of the Firm of Burrow, Stewart and Milne, stove manufacturers, is mentioned as the probable successor of E. A. Dalley on the board of license commissioners. Mr. Milne is president of the Conservative Association and a very popular member of the party. He has been offered the position and it is understood he will accept it.

PETERBOROUGH.

Peterborough, Jan. 21.—The marriage recently took place of Manson Comstock, managing director of the Peterborough Hardware Co., to Miss Garbutt, of this city. After a honeymoon trip to New York and other American cities, Mr. and Mrs. Comstock have taken up their residence on Sherbrooke Street. Mr. Comstock's many friends in the hardware business will wish he and his bride every happiness and prosperity.

* * *

Maurice Lowry, a former member of the staff of the Peterborough Hardware Company, has gone to Cuba, where he is getting along well. He intends remaining in the West Indies for some time.

* * *

A force of men from the Northern Electric Company of Montreal are here at present putting in the switchboard in the Bell Telephone Company's new building. It is expected that it will be ready for occupation early in March. The company has just finished the undergrounding of its wires in the central portion of the city.

* * *

The annual meeting of the Peterborough Lock Works will be held early in January. It is understood that the company has had a most successful year.

* * *

There is a probability that the works of the Wm. Hamilton Company, which have been practically closed down for the past six weeks, may be re-opened at an early date. The A. R. Williams Machinery Company, of Toronto, have made a proposition to the local City Council to take over the plant and operate it. They ask for a loan of $50,000 for five years, and a fixed assessment of $10,000 for five years. The Manufacturers' Committee of the City Council is considering the proposition.

* * *

Wm. Buller, of the Peterborough Fuel & Cartage Company, has been elected an alderman for the City of Peterborough. He stood fifth from the top of the list and should make a successful legislator.

* * *

The City Council has recommended the granting of a fixed assessment for the Peter Hamilton Co., manufacturers of farming implements, of $20,000 for

a period of ten years. The provincial legislature will be asked to approve of action along this line.

* * *

The Canadian Cordage Company is running full time and prospects are bright for the future of the industry.

LONDON.

London, Jan. 21, 08.—Indications are not lacking to show that the industrial situation in this city is brightening up, and there are reasons to believe that within a short time almost every factory in London will be running at full force. E. Leonard & Sons, engine and boiler manufacturers have nearly all their men at work again after the Christmas shutdown. For the present they are working principally on stock. The firm has every confidence in the future. Chas. H. White, manager of the London Rolling Mills Co., says that concern will presently be running full strength, though it has been almost completely closed down for several weeks. Mr. White says he is getting many more inquiries, which is taken as an indication that conditions are improving, and he confidently looks for better times in the near future. The reopening of the rolling mills will have a decidedly beneficial effect on the local industrial situation, for since the shutdown only eleven out of a staff of 225 men have been at work.

* * *

The bill before parliament enabling farmers and laborers to form co-operative societies does not appear to have worked up local hardwaremen to any extent. As a matter of fact, judging from the answers given your correspondent by a number of dealers interviewed, they do not appear to have given the matter any consideration. "If," said one merchant, the matter is as you state it, I consider the bill a piece of class legislation of the worst kind. Why should any parties be allowed privileges that are denied to others? As it stands, there seems to be legislation for the benefit of all classes except the retail merchant. What greater proof is needed of the advisability of strong organization of the retail trade without such unity I can see no way by what retail merchants can get justice at the hands of parliament."

* * *

The McMurtry Hardware Company, after being six months in business, are so gratified with results that they have decided to move to larger premises in a more central location, and accordingly have secured a store on Dundas St., two and a half blocks west of their present stand. The tendency of the trade in London is to get as close to the market as possible. This move of the McMurtrys will give them that advantage.

GUELPH.

Guelph, Jan. 15.—Harry Johnston, of Phelpston, is in the city trying to locate a brick factory here, if conditions are favorable.

* * *

Fred. Smith, plumber and steamfitter, has been appointed skip for the Royal City Curling Club for the Ontario Tankard.

One of the latest factories being mooted for Guelph is the London Machinery Co., which may be built this coming summer. H. B. Callander, who is the manager of the concern, is one of the city representatives on the council board.

* * *

W. R. Faulkner, eastern representative of the Guelph Stove Co., is in the city this week getting posted with the details in regard to the new goods of his firm.

* * *

The report of the chief of the fire department shows that there were forty-six fires in the city last year. Among these were two at Taylor-Forbes', amounting to $6,500 loss, and the oil house of the Bond Hardware Co., valued at $800, all of which were fully insured.

* * *

R. L. Torrance, of the Armstrong Carriage Co., was elected by acclamation to the post of water commissioner for the next two years.

* * *

The Guelph Stove Co. has been one of the first foundries in the country to open their works this year. They only stopped molding on the Saturday before Christmas, the rest of the factory working till New Year's, when they closed down for stock-taking. They opened up the nickel department today, and expect to open up the rest of the departments in a few days, on the eight-hour day system. The travelers are going over the new lines which they are placing on the market for this year's trade, and they expect to start out on the beginning of February. Among their new lines is a special steel range.

Guelph, Jan. 21.—Trade is dull in Guelph at present. It was to be expected that a little slackness would result after the Christmas trade, but the heavy snow has prevented the farmers from bringing in their trade.

* * *

A special committee composed of the markets, finance and fire and light committees of the city council met on Tuesday to consider what can be done to enlarge the winter fair. It was resolved to interview the local members of Parliament and see if they can get land belonging to the armory. This leaves three options. They will either build a parallel to the present building in the armory grounds, or remove the present building to the central exhibition grounds.

* * *

The Templin Manufacturing Co., of Fergus, recently received a diploma, the highest award at the National Exhibition, for the best exhibit of and improvement in seed and grain separators. The Ottawa and London diplomas were granted, some time ago. Many improvements have recently been made in their mill, which is meeting with the greatest success.

* * *

Engineer Davis, of Berlin, was in the city last week, with respect to the new waterworks extensions. He is making a proposition by which he will attend to the building.

* * *

Reginald Gordon, of G. A. Richardson's hardware store, will leave at the end of the month for North Bay, where he has accepted a position in the hardware line.

* * *

The Louden Machinery Co. is one of the busiest hives in the city of Guelph at the present time. Under the able management of H. B. Callander, the firm has had a very prosperous time. Not a man has been laid off during the winter season, and the ten-hour day has been kept up steadily. Their output is having a ready sale, especially their litter carriers and hay forks.

* * *

A lunch-basket, carried by his son, was the ingenious method adopted by Thomas Storms to pilfer brass pickings and small articles from the Taylor-Forbes Manufacturing Co.'s factory, and convey them to his home. He appeared before the magistrate, but as Mr. Taylor did not press the case against the prisoner, he being a married man, he was allowed to go on suspended sentence. Over 80 pounds of metal were found at the shop of the Rag and Metal Co., where the thief had taken the goods to sell.

* * *

James Oborne, general superintendent of the C.P.R., promises that Guelph will get a new station, and says that the G.T.R. will surely follow suit.

CHATHAM.

Chatham, Jan. 21.—It will be remembered that Chatham played a considerable part last year in securing the laying over of the Co-operative Societies' Bill to another session of Parliament. The local retail merchants enlisted the support of their representatives, who used their influence to the desired end. Geo. Stephens, ex-M.P., himself a retailer and head of the extensive hardware firm of Stephens & Douglas, put his shoulder to the wheel, and did most effective work in the line of having the project blocked for the time being.

* * *

The need of retail merchants to be ever on their guard was strikingly exemplified by the fact that the first intimation most local retailers had of the progress of the scheme was the article in last week's issue of Hardware and Metal. Since before the commencement of the Christmas holidays, the local Retail Merchants' Association, which set the ball of opposition rolling last year, has not met, but the prospect is that a meeting will promptly be called and action taken.

* * *

The scheme of encouraging co-operative societies meets with pronounced disfavor among all classes of retailers here. "We are to be robbed, in order that

the public may be robbed as well," is the terse way one hardwareman put it; and this is the practically unanimous view of all who have studied the workings-out of the scheme. The extensive opportunities the new act furnishes for the fleecing of the unwary, and the unfair treatment of the retailer, who must pay a heavy fee to form a company while the co-operative promoter pays nothing and is exempt from personal liability, are matters for adverse comment.

It is expected that the retail merchants will meet in the near future, when definite action will be taken.

* * *

Following the Christmas season, business is usually quiet; but local hardwaremen state that this year January's business is, if anything, a little in excess of that of a year ago. Nothing has been more striking than the rapid growth of public confidence during the past few weeks. This has had its reflex effect on trade in all lines, hardware being no exception.

* * *

The Chatham Carriage Co. have definitely located in Dresden. They have taken over the plant formerly owned by Wm. Rudd, and have set several men to work. They will use the Rudd factory till their own new plant is built and equipped.

* * *

Luther Bros. Co., of Milwaukee, have secured W. R. Fellows, jr., of Blenheim, to act as their agent in that locality for carborundum tool and sickle grinders.

* * *

A quiet movement has been going on for a short time among Amherstburg merchants to secure an unanimously signed petition to extend the early closing movement to include every night but Saturday. The petition has met with a fair degree of success, though, owing to the refusal of a few of the merchants to join, the scheme has been blocked for the present. It may be put up to the Council to pass an early closing by-law with a view to securing the desired result.

* * *

Hotel Sanita, formerly the property of the Chatham Mineral Water Co., was last week sold under the hammer, Archibald Park, of Park Bros.' foundry, being the highest bidder. The price was $21,700.

* * *

A well attended meeting of the Board of Trade was held on the 15th, when the subject of fruit culture was discussed by Editor A. B. Cutting, of the Canadian Horticulturist, and Prof. H. L. Hutt, of the O.A.C. Jas. Oborne, of the C.P.R., also made a few general remarks, urging the setting aside of 800 acres in Chatham for industrial sites, and the formation of a 100,000 club to boom the city.

West of the Great Lakes

Ice Locomotive in Use at Prince Albert—Summer Weather Prevails at Calgary—Small Blaze at Saskatoon Store—Bright Business Prospects for Vancouver.

PRINCE ALBERT.

Prince Albert, Jan, 14.—The Canadian Northern combined railway and traffic bridge is being pushed as rapidly as skill and labor will permit. The abutment on the south bank is nearly completed, while that on the north bank is about half done. Six piers are in the stream, the fourth of which will be the pivot, carrying the swing span to allow uninterrupted navigation of the river during the busy summer months. Although the plan calls for a roadway on each side 10 feet only in width, the city is asking to have this width increased to 12 feet. The contract calls for the completion of this bridge by November next.

* * *

A movement is on foot to establish at Prince Albert a large creamery of the most modern type. The firm looking over the ground are thoroughly practical Old Country butter and cheese makers, and the farmers in the district are enthusiastic over the enterprise. Meetings are being held at the principal centres and an estimate made of the number of cows which may be depended upon.

* * *

The cordwood camps on the outskirts of the city present a busy phase of Prince Albert's winter life. Thousands of cords are being cut, furnishing employment for large numbers of men, and the ice-bound river, its summer steam boats, barges and launches, giving place to the less picturesque and slower-moving horse teams, is the great highway used for transporting this wood to its first market in the city.

* * *

The Celtic Pressed Brick Co. is the newest business firm to get organized. This company, capitalized at $100,000, has large tracts of superior clay at its command and fully expects to place its first goods on the market by July next. Samples of the clay which have been pressed and burned show unusually fine qualities in color, texture and resistance.

* * *

The Red Rock Brick and Pottery Company, which operated during the latter part of 1907, has made arrangements for a very much increased output for 1908. Some of this company's brick were recently subjected to a very severe test of boiling, freezing and baking, with the result that the ware was absolutely unhurt, but on the contrary very much improved in appearance by this artificial weathering.

* * *

Logging operations, although on a smaller scale than was anticipated last year, are employing more men than the beginning of the season promised. The Sturgeon Lake Company have more men on their pay roll than ever before. Their ice locomotive "The Northern Bell," is making its regular trips, bringing in about 100,000 feet per load. The first trip was undertaken before the lakes were sufficiently frozen, and consequently the engine took a dip in one of the numerous lakes on the way. The water was shallow and the engine was soon out, none the worse for her impromptu bath.

SASKATOON.

Saskatoon, Jan. 17.—Some of our local hardwareman are devoting a good deal of their spare time to curling at this season of the year. The "roarin' game" has its attractions as well as being an excellent outdoor exercise. When a trophy is at stake the excitement is great and with rock and broom the sport is carried well into the night. D. M. Leyden skips a city rink and alderman Wm. Hopkins shines as champion on the west side. A few days ago "Billy" challenged the east side to meet him on the ice with their best rink. A. E. Young accepted the challenge and "Billy" got licked to the tune of 13—9. A meeting of curlers was held to make arrangements for the coming bonspeil.

* * *

T. Campbell had his store slightly damaged by fire a few days ago. The fire originated from an overheated stove and was checked in time to prevent much damage.

* * *

The Canadian Northern Railway officials are preparing carloads of snow fences to be sent to different points along their line in this vicinity. So far there has been very little snow this winter but last winter taught the company a lesson which will not soon be forgotten.

* * *

A new industry has just been added to Saskatoon in the shape of a tent-making establishment. G. C. Lawrence is at the head of the new enterprise which has started on Twentieth St. Harness making will also be a branch of the business.

* * *

The following have been elected officers of the Board of Trade for the present year: President, M. Isbister; vice-president, H. Acheson; treasurer, T. F. Calder; secretary, A. Turner. It is felt that these will form a strong, active and energetic body of officers, and that everything in their power will be done to further the interests of the city. Indications point to vast strides being made this year in railway operations and building industries and a more suitable opportunity could not be had for showing manufacturers and wholesalers the advantages of the city as a distributing point. Situated as Saskatoon is, on three trunk lines and with the completion of the Goose Lake

branch, there will be seven different directions open for wholesale distribution. Should the new schedule of freight rates be approved by the railway commission it will be greatly to the city's advantage, being a flat rate on a mileage basis.

* * *

The young ladies of Battleford have re-organized their hockey club for the season. It is their intention to challenge the ladies of the north part of the town at an early date.

* * *

Beginning with this week Lanigan will have a tri-weekly train service which means a good deal to the merchants and residents of the new town.

CALGARY.

Calgary, January 15.—Beautiful, sunny weather prevails and building operations inside and out are in full swing. This regular weekly statement is becoming monotonous, but it cannot be helped, for it is true. There is not a sign of snow or ice to be seen in the city, and dusty roads are the order of the day. Stoves have been very poor stock this winter, and furnaces not as good as usual. However, hardware trade in general is good and a great deal of stock is changing hands.

* * *

The directors of the Dominion Exhibition, which will be held in Calgary this year, are getting busy and are already getting on with the work on the exhibition grounds. On Thursday this week they gave a complimentary banquet to the city council, school board and board of trade.

* * *

The hardwaremen seem to be taking the lead in hockey. The success of Linton & Hall, hardware merchants, in the game against the Hudson Bay Company last week brought out another hardware firm, McBride & Co., and the result was a loss to the latter, with six goals to two in favor of Linton & Hall. This was more than Ashdown's Hardware Co. could stand, and a fiercely worded challenge to McBride's was at once issued. However, the McBride men scored an easy victory, six to three, thus leaving Linton & Hall the present champions. There are still several other firms to hear from.

* * *

Landseekers from across the line are already beginning to arrive for the coming season and are being taken out in automobiles and democrats to look over the country.

VANCOUVER.

Vancouver, Jan. 17.—Though the season of 1907 was not considered a very favorable one in the Canadian Northwest, owing to a variety of causes, the mills of British Columbia have nothing to complain of. The total of lumber sold, the big end of the stick going to the Northwest, was nearly, if not quite, half a billion feet. Of this the coast mills sold, it is figured, over 317,00,000 feet, and the mills of the interior or mountain district, 187,000,000 feet.

The estimates of the year's business are, of course, not exact to a foot, but are given very closely as follows: Mountain mills, stock beginning of 1907, 88,000,000 feet; timber cut during the year, 400,000,000 feet, of which 280,000,000 feet were turned into lumber by the mills; leaving 120,000,000 feet of logs uncut; stocks in mill yards end of season, 190,000,000 feet; leaving net sales for 1907, 178,000,000 feet.

On the coast the estimate is that 50,000,000 feet were taken from Dominion lands; stock on hand in beginning of year 100,000,000 feet; actual scale of logs (provincial lands), during 1907, 407,065,223 feet; logs in the water, etc., uncut, 160,000,000 feet; lumber in yards end of season, 80,000,000 feet; leaving balance of lumber sold from the coast in 1907, 267,065,223 feet.

* * *

The British Columbia government announces that a "stock-taking" of all timber yet owned by the province will be made, following the recent reserve placed on all unstaked timber. This, members of government state, will necessitate a very careful survey of the timber areas of the province. All the action taken and to be taken will be in line with bringing down a progressive and careful timber policy. The reserve, the survey of timber, etc., will be the preliminary steps, and later the final policy will be announced. Until then, not even a hand-logger's license will be issued. The legislature which convened this week is to take up the subject of survey of agricultural lands in the province as a preliminary step to immigration reforms.

* * *

Construction echoes from the Grand Trunk Pacific begin to be heard on the coast. Foley Bros., Larson & Stewart, are building the 120 miles west from Edmonton, and contracts for other sections in the mountains are to be let shortly, representatives of big contractors being now in the province to figure on the work. From Hazelton, the head of navigation on Skeena River, an item comes, which says that trains are to be running into that northern outpost by 1910, the assertion being credited to a G.T.P. engineer.

* * *

During the coming season it is said the G.T.P. will have 500 horses in the interior of the province engaged in packing supplies for the various survey camps, etc. At the present time officials of the company are at Victoria, supposedly in connection with negotiations to be laid before the legislature at the session just opened.

* * *

Chargeur Reunis, the French steamship company, which is entering the freight-carrying trade between the ports of Europe and British Columbia, will have its first steamer, the Ceylon, here in April. Thereafter regular sailings will be made, Antwerp being the home port of the vessels, from which sailings will be dated. The vessels, like those of the Blue Funnel line, will come via Suez, India and the Orient. The Kosmos line, the German steam-freighters, sail round the world, coming into the Pacific via Suez and India, and leaving round the Horn, or vice versa. The addition of the new company is already having some effect on quoted ocean freight rates, and corresponding reduction in quoted prices from Europe, especially on metals. In black rods, wires, etc., even the surtax of one-third the duty, does not prevent German makers competing successfully for business.

* * *

Mineral output starts off well at the beginning of the year in British Columbia. From the Kootenays, where the chief output is from lode mining, the figures to date for 1908 are:

For the week, Boundary camp, 12,887; Rossland, 6,018; east of Columbia River, 3,216 tons; total, for week ending Jan. 11th, 22,121 tons. For the year, Boundary, 12,887 tons; Rossland, 11,572 tons; east of Columbia River, 5,081 tons. Total for year, 29,540 tons.

The Boundary mines have the first week's returns for the year, having just re-opened. They are, however, now getting back to their usual shipments. On the coast, the big Britannia mine on Howe Sound is still shut down and likely to remain so for some time.

Vancouver, B.C., Jan. 10.—While retail trade is very quiet in the city, and through the province, which is expected at this season, the wholesale trade is busy preparing for a larger output than ever. All indications point to a prosperous year. The mills will resume cutting lumber about the end of January, in order to be stocked up in readiness for the opening of trade in the Northwest; the logging camps, which, of course, depend on the mills for their impetus, will all be running full blast by the end of the month. In the mining country reports are very favorable, especially from the smelters, where enlargement of capacity is the order of the day, while some of the bigger concerns are evidently preparing for a long season of active mining work. In construction circles, there is to be considered an expenditure of over two millions by the city of Vancouver on bridges, waterworks, etc., and if railway construction is to proceed on the G.T.P. from the coast, as reported, there will be more railway building this year in B.C. than for many years past, as the Great Northern is certainly proceeding with their partly-executed plans, and the B.C. Electric is building sixty miles in the Fraser valley, while the C. P.R. has also some construction in hand, notably the branch of the E. & N. to Alberni, on the west coast of Vancouver Island, and the cutting down of the big hill at Field, where two enormous tunnels are now being driven.

Such an array of industrial activity, coupled with healthy growth in agricultural population and industry, and much building operations, presents some proof of the assertion that there is warrant for preparing for a good season's trade. A factor not included, but by no means to be neglected, is the Yukon and Atlin trade, which has assumed the status of a steady factor which can be counted on with certainty.

The withdrawal of all provincial timber lands from privilege of being staked and taken up under special license has caused a great deal of comment in timber circles in the province, but there is not much adverse criticism of the Government's policy. There is a very large area held under special license, sufficient if logged steadily, for the demands of trade for many years to come. The other side of the case is that the revenue accruing annually to the Government from licenses now in force, and good for twenty-one years, is over a million dollars. Therefore, the Government can very well turn the remainder of the public timber domain into a forest reserve for an indefinite period. The license-holders can afford to smile, for the withdrawal of all Government lands from staking privileges, makes that already staked the only available property on the market. The privilege of hand-logging has been cancelled also, so that a very different situation is now faced by the lumber industry.

* * *

To reduce and refine all the lead concentrates from the St. Eugene and other mines in the Kootenay, the Trail lead plant has been very much increased in size. In past years many thousands of tons of lead concentrates have been annually shipped to Antwerp and Hamburg for refining, coming into competition there with lead concentrates from Australia and other parts of the worls. Now the refined product alone will be all the Consolidated Smelting Co. will ship.

* * *

J. P. Graves, president of the Granby Co., announced that the company intended at an early date increasing the capacity of the big smelter at Grand Forks by 1,000 tons daily. Its present capacity is from 3,000 to 3,500 tons daily. The Granby mines and smelter are running full and all labor troubles have been settled. The Granby mines are at present raising about 1,500,000 tons per annum, which will be increased to nearly 1,650,000 tons if the smelter is increased.

* * *

K. J. Morrison, a practical machinist, formerly for some years with the Dominion Steel Co at Sydney, C.B., has purchased the plant and stock of the B. C. Wire & Nail Co. This plant was badly injured by fire, but Mr. Morrison has had a force of men on taking the machines down under his personal supervision. He has rebuilt some nineteen machines in all from the twenty-three or twenty-four which were formerly in use. He expects to be at work very shortly turning out nails in large quantities. Later on Mr. Morrison intends enlarging the wire-drawing portion of the plant, completing the process by installing galvanizing appliances also. The black rods he will import from Cape Breton or direct from England, as he finds most advantageous.

* * *

J. Ronald has located in Vancouver, representing a Manchester firm, which makes a specialty of belting made from camel's hair. The firm has a branch in Montreal, and will ship from there until arrangements are made to carry a stock in Vancouver.

CONDENSED OR "WANT" ADVERTISEMENTS.

RATES.

Two cents per word first insertion; one cent per word subsequent insertions.

Five cents additional each insertion where box number is desired.

Contractions count as one word, but five figures (as $1,000) are allowed as one word.

Cash remittances to cover cost **must** accompany all advertisements. **In no case** can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

RULES FOR COPY.

In addressing replies care of HARDWARE AND METAL don't fail to give box number.

Replies addressed to HARDWARE AND METAL boxes are re-mailed to advertisers every Monday, Wednesday and Friday.

Requests for classification will be followed where they do not conflict with established classified rules.

Orders should always clearly specify the number of times the advertisement is to run.

All "Want" advertisements are payable in advance.

AGENTS WANTED.

This is the problem of many manufacturers who are anxious to get a foothold in Western Canada. It will be easily solved if HARDWARE AND METAL is given the opportunity to solve it.

AGENT wanted to push an advertised line of Welsh tinplates; write at first to "B.B.," care HARDWARE AND METAL, 88 Fleet St., E.C., London, Eng. [tf]

TILES—Plain enamelled, decorated majolica, ornamental, rough surface, and many other kinds, suitable for walls, hearths, furniture backs, dadoes, radiator recesses, etc. Messrs. J. H. Barrett & Co., Ltd., Stoke-on-Trent, England, are open to appoint agents in Toronto, Montreal, Winnipeg, Ottawa, Hamilton, London, Ont. [5]

FIRST-CLASS English firm, manufacturing A1 line of metal polish, wishes to secure Canadian agents for Maritime Provinces, and Western Canada. Have already secured agents for Ontario, who have handled their line for nearly a year, and have found it very ready seller. For full information apply Box 690, HARDWARE AND METAL, Toronto. (4tf)

ARTICLES FOR SALE.

Don't keep any fixtures or tools around your store for which you have no further use. They are worth more to-day than they will a year hence. Don't keep money tied up which you could use to secure discounts from your wholesaler.

FOR SALE—Stock of cut nails, sizes 60D to 3D; no 40D or 4D in stock; stock in first class order; price $2 base, F.O.B. Paisley. A. Sinclair Estate, Paisley, Ont. [5]

FIRST-CLASS set of tinners' tools complete with benches, cheap if sold at once. For particulars write Box 54, Unionville. [6]

FOR SALE—Set of tinsmith's tools complete; great bargain for cash. For particulars write. W. A. Matthews, Cannington. (4)

QUANTITY of black sheet steel 16 gauge from 30x72 to 60x96; galvanized up to 42x96. W. S. Gordon. Tweed, Ont. (6)

ARTICLES WANTED.

If you cannot afford to buy a new counter, show case, screw cabinet, store ladder, or some other fixture which you could use to advantage, try a "Want Ad." under "Articles Wanted," and you may get what you want at a bargain price.

PRICES and full particulars required for 200 yards second-hand standard gauge rail (about 60-lb.) and sleepers, with 3-ton locomotive, steam jib crane complete, by C. & W. Walker Ltd., Newport, Shropshire, England. (4)

BUSINESS CHANCES

FREE OFFER TO TINSMITHS—Can you draw the pattern of a square mitre for an O.G. eave trough? If not send for full particulars regarding our sheet metal pattern course and we will send you free drawing and instructions showing how to draw the pattern for a square mitre. Address the Sheet Metal School, Box 419, Galt, Ont. (5)

PARTNER wanted to take half interest in hardware business. Must have some hardware experience and invest $1,500. Box 688, HARDWARE AND METAL, Toronto. [4]

HARDWARE business for sale in live town near Toronto; established over 30 years; includes store building and tinsmithing department; good reasons for selling. Box 686, HARDWARE AND METAL, Toronto. [8]

BUSINESS WANTED

WANTED—Good live hardware business in Ontario, city or town preferred. Box 677, HARDWARE AND METAL, Toronto. (2)

SITUATIONS VACANT.

You can secure a "five-thousand-a-year" manager, or a "five-hundred-a-year" clerk, by stating your wants under "Situations Vacant."

WANTED—A traveler for Canada, to represent a large Canadian manufacturer; must have acquaintance with wholesale and retail plumbing trade, retail hardware and gas companies; only those who can absolutely fill the requirements need apply; give references, age, married or single, salary expected. Address Box 684, HARDWARE AND METAL, Toronto. (4)

HARDWARE salesman wanted—Give age, experience, and all particulars. J. S. Moir, Arnprior, Ont. (5)

TRAVELING position wanted by hardwareman, seven years wholesale experience; 5 years' experience on road; best references. Box 687, HARDWARE AND METAL, Toronto. (6)

SITUATIONS WANTED.

Travellers, clerks, or tinsmiths, wishing to secure new positions, can engage the attention of the largest number of employers in their respective lines, by giving full particulars as to qualifications, etc., under "Situations Vacant."

WANTED — Position as foreman tinsmith and plumber; would take an interest. Box, 683 HARDWARE AND METAL, Toronto. [4]

WANTED—Position as foreman tinsmith; 18 year's experience; can do plumbing, lead or iron pipe. Box 685, HARDWARE AND METAL, Toronto. (5)

POSITION wanted at once as clerk; two years experience as manager of branch hardware store. Box 689, HARDWARE AND METAL, Toronto. (4)

WELLAND CANAL

Tenders for Supplies for the year 1908.

SEALED TENDERS for Supplies addressed to the Superintending Engineer, Welland Canal, St. Catharines, will be received until 16 o'clock on Monday, the 10th February, 1908, for the supply and delivery of various articles of Timber, Hardware, Castings, Fuel, Paints, Oils, etc., for use on the Welland Canal and its branches for the year 1908.

Specifications, forms of tender and other information may be obtained at the Superintending Engineer's Office, St. Catharines, on and after Tuesday, 21st January, 1908.

The lowest or any tender not necessarily accepted.

By Order,

L. K. JONES,
Secretary.

Department of Railways and Canals,
Ottawa, January 17th, 1908.

Newspapers inserting this advertisement without authority from the Department will not be paid for it. (5)

MANITOBA HARDWARE AND METAL MARKETS

Corrected by telegraph up to 12 noon Friday, Jan. 24, Room 511, Union Bank Bldg, Winnipeg, Man.

January business is reported fairly satisfactory by the jobbing houses. Orders for spring delivery are probably not so heavy as a year ago, but the trade is rapidly regaining confidence. Mild weather is making this a very easy winter for the railways, and there are few complaints of delayed shipments. Values are steady.

Wire—Barbed wire, 100 pounds, $3.25; plain twist, $3.40; staples, $3.40; annealed wire, $2.90 base; oiled, 10c extra; bright iron, $3.10 base; brass spring wire, 32c base; plain galvanized wire, 6, 7 and 8, $3.70; No. 9, $3.25; No. 10, $3.70; No. 11, $3.80; No. 12, $3.45; No. 13, $3.55; No. 14, $4.10.

Poultry Netting—Discounts are 50 and 5 per cent.

Horseshoes—Iron, No. 0 to No. 1, $4.65; No. 2 and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to No. 1, $5; No. 2 and larger, $4.75.

Horsenails—No. 10 and larger, 22c; No. 9, 24c; No. 8, 24c; No. 7, 26c; No. 6, 28c; No. 5, 30c; No. 4, 36c per lb. Discounts; "C" brand, 40, 10, 10 and 7½ p.c.; "M.R.M." cold forged process, 50 and 10 p.c. Add 15c per box. Capewell brand, quotations on application.

Wire Nails—$3 f.o.b. Winnipeg, and $2.55 f.o.b. Fort William.

Cut Nails—Now $3.20 per keg.

Pressed Spikes—¼ x 5 and 6, $4.75; 5-6 x 5, 6 and 7, $4.40; ⅜ x 6, 7 and 8, $4.25; 7-16 x 7 and 9, $4.15; ½ x 8, 9, 10 and 12, $4.05; ⅝ x 10 and 12, $3.90. All other lengths 25c extra, net.

Screws—Flat head, iron, bright, 80, 10, 10 and 10; round head, iron, 80; flat head, brass, 75; round head, brass, 70; coach, 65.

Nuts and Bolts—Bolts, carriage, ⅜ or smaller, 60 and 5 per cent.; bolts, carriage, 7-16 and up, 55; bolts, machine, ⅜ and under, 60 and 5; 7-16 and over, 55; bolt ends, 52½; sleigh shoe bolts, ⅜ and under, 55; 7-16 and over, 45; machine screws, 60; plough bolts, 50; square nuts, cases, 2¾, small lots, 2¼; hexagon nuts, cases, 2¾; small lots, 2¼; stone bolts, 70 and 10 per cent.

Rivets—Iron, 60 and 10 per cent.; copper. No. 7, 36½c; No. 8, 37½c; No. 9, 38c; No. 10, 40c; No. 12, 43c. Assorted, No. 8, 38½c and No. 10, 41½c.

Green Wire Cloth—$1.75 per 100 square feet.

Coil Chain—¼-in., $7.25; 5-16, $5.75; ⅜, $5.25; 7-16, $5; ½, $4.75; 9-16, $4.70; ⅝, $4.65; ¾, $4.65.

Shovels—Discounts are 40 and 5 p.c.

Harvest Tools—50, 10 and 5 p.c.

Axe Handles—Turned, s.g. hickory, $3.15; No. 1, $1.90; No. 2, $1.60; octagon, extra, $2.30; No. 1, $1.60.

Axes—Bench axes, 40 and 5; broad axes, 25 per cent. discount off list; Royal Oak, per doz., $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.50; Copper King, $8.25; Columbian, $9.50; handled axes, North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.75; Copper King, $10.50 per dozen.

Auger Bits—"Irwin" bits, 47½ per cent., and other lines, 70 and 10 per cent.

Blocks—Steel blocks, 35; wood, 60.

Hinges—Light "T" and strap, 65.

Hooks—Brush hooks, heavy, per doz., $8.75, grass hooks, $1.70.

Files—Arcade, 75; Black Diamond, 60; Nicholson's, 62½ per cent.

Locks—Peterboro and Gurney 40 p.c.

Stove Pipes—6-in., per 100 feet length, $9.25; 7-in., $10.

Tinware, Etc.—Pressed, retinned, 70; pressed, plain, 75 and 2½; pieced, 25; japanned ware, 35; enamelled ware, Famous, 50; Imperial, 50 and 10; Imperial, one coat, 60; Premier, 50; Colonial, 50 and 10; Royal, 60; Victoria, 45; White, 70 and 5; Diamond, 50; Granite, 60 per cent.

Galvanized Ware—Pails, 37½ per cent.; other galvanized lines 33 1-3 per cent.

Solder—Quoted at 27c per pound.

Lanterns—Cold blast, per dozen, $7; coppered, $9; dash, $9.

Churns—45 and 5; list as follows: No. 0, $9; No. 1, $9; No. 2, $10; No. 3, $11; No. 4, $13; No. 5, $16.

Wringers—Royal Canadian, $36; B.B., $40.75 per dozen.

Lath Yarn—10¾c.

Rope—Sisal, 10½c per pound, and pure manila, 14¾c. British manila, 11¾c.

Building Paper—Anchor, plain, 66c; tarred, 69c; Victoria, plain, 75c; tarred, 88c; No. 1 Cyclone, tarred, 84c; No. 1 Cyclone, plain, 66c; No. 2, Joliette, tarred, 69c; No. 2, Joliette, plain, 51c; No. 2 Sunrise, plain, 56c; Jubilee plain, 75c; Jubilee tarred, 88c; Buffalo plain, 66c; Buffalo tarred, 69c; Lion plain, 55c.

Corrugated Iron and Roofing, Etc.—Corrugated iron, 28 gauge, painted, $3; galvanized, $4.10; 26 gauge, $3.35 and $4.35. Pressed standing seamed roofing, 28 gauge, $3.45 and $4.45. Crimped roofing, 28 gauge, painted, $3.20; galvanized $4.30; 26 gauge, $3.55 and $4.55.

Ammunition, Etc.—Cartridges, rim fire, Canadian, 50 per cent.; American, 33 per cent.; pistol sizes, Canadian, 25 per cent.; American, 5 per cent.; military, Canadian, 20 per cent. off. American, 10 per cent. advance. Primers, $1.55. Loaded shells: English and Canadian makes, 12 gauge black soft, $18; 10 gauge, $22.50; 12 gauge smokeless, chilled, English, $24; Canadian, $23; 10 gauge smokeless, chilled, English, $28; Canadian, $27. Shot: Drop, per 100 lbs., $6.75; chilled, $7.15; buck, $7.55; 28 ball, $7.95. Powder: F.F., keg, Hamilton, $4.75; F.F.G., Dupont's, $5.

Iron and Steel—Bar Iron basis, $2.70. Swedish iron basis, $4.95; sleigh shoe steel, $2.75; spring steel, $3.25; machinery steel, $3.50; tool steel: Black Diamond, 100 lbs., $9.50; Jessop, $13.

Sheet Zinc—$8.50 for cask lots, and $9 for broken lots.

Pig Lead—Average price is $6.

Lead Pipe—Quoted at $7.25.

Copper—Planished copper, 33½ per pound; plain, 28½c.

Iron Pipe—Black pipe, ¼-in., $2.70; ⅜, $2.85; ½, $3.75; ¾, $4.75; 1, $6.75; 1¼, $9.25; 1½, $11; 2, $14.80; 2½, $24.60; 3, $32.30; 3½, $40.50; 4, $46; 4½, $54. Galvanized: ¼-in., $3.65; ⅜, $3.80; ½, $4.50; ¾, $5.80; 1, $8.40; 1¼, $11.40; 1½, $13.80; 2, $18.40.

Fittings—Wrought couplings, 55 per cent.; nipples, 70 per cent.; classified malleable fittings, 25 per cent.; malleable bushings, 50 per cent.; malleable unions, 55 per cent.

Galvanized Iron—Apollo, 16-gauge, $4.15; 18 and 20, $4.40; 22 and 24, $4.65; 26, $4.65; 28, $4.50; 30-gauge or 10¾-oz., $5.20; Queen's Head, 20, $4.60; 24 and 26, $4.90; 28, $5.15.

Tin Plates—I.C. charcoal, 20x28, box, $10; IX charcoal, 20x28, $12; XXI charcoal, 20x28, 14.

Terne Plates—Quoted at $9.50.

Canada Plates—18x21, 18x24, $3.50; 20x28, $3.80; full polished, $4.30.

Lubricating Oils—600W, cylinders, 80c; capital cylinders, 55c and 50c, solar red engine, 30c; Atlantic red engine, 29c; heavy castor, 28c; medium castor, 27c; ready harvester, 28c; standard hand separator oil, 35c; standard gas engine oil, 35c per gallon.

Petroleum and Gasolene—Silver Star, in bbls., per gal., 20c; Sunlight, in bbls., per gal., 22c; per case, $2.45; Eocene, in bbls., per gal., 24c; per case, $2.60; Pennoline, in bbls., per gallon, 25c; Silver Light, 22c. Engine gasolene, in barrels, gal., 25½c, f.o.b. Winnipeg, in cases, $2.60.

Bluestone—7c lb.

Paints and Oils—White lead, pure, $6.50 to $7.50, according to brand; bladder putty, in bbls., 2½c; in kegs, 2¾c; turpentine, barrel lots, Winnipeg, 70 cents; Calgary, 97 cents; Lethbridge, 97c; Edmonton, 98c. Less than barrel lots, 5c per gallon advance. Linseed oil, raw, Winnipeg, 65c; Calgary, 77c; Lethbridge, 77c; Edmonton, 78c; boiled oil, 3c per gallon advance on these prices.

FURNACE PROVIDES VENTILATION.

Those who advocate the use of other styles of heating systems are apt to point out that the furnace requires an excessive amount of coal to heat a building as compared with their systems, but they do not consider that the furnace provides in addition to heating excellent ventilation and the increased amount of fuel used should be charged to ventilation.

THOMAS J. DRUMMOND HONORED.

Thomas J. Drummond, of the firm of Drummond, McCall & Co., Montreal, has been elected by acclamation president of the Montreal Board of Trade in succession to George Caverhill, of Caverhill, Learmont & Co. Farquhar Robertson was elected first vice-president; George Cains, second vice-president; and J. R. Binning, treasurer, all by acclamation. Elections will have to be held for the Board of Trade Council, and the Board of Arbitration, as there are thirteen nominations for the twelve seats on each board.

Mr. Drummond was born in 1860 in Leitrim, Ireland. He came with his parents to Canada in 1864 and has made his home in Montreal since then. In 1881 in conjunction with James T. McCall, and his brother, George E. Drummond, he founded the well-known firm

of Drummond & McCall and has bee closely identified with the iron and steel industries of Canada ever since. The extent of this connection can be seen from the fact that Mr. Drummond is

T. J. DRUMMOND,
Elected President of the Montreal Board of Trade for 1908, by acclamation.

vice-president of the Canadian Iron and Foundry Co., vice-president of the Lake Superior Corporation, vice-president of the Algoma Railway Co. and director of the Canada Iron Furnace Co., and in addition holds offices in other well-known organizations.

For many years Mr. Drummond has been an active member of the Board

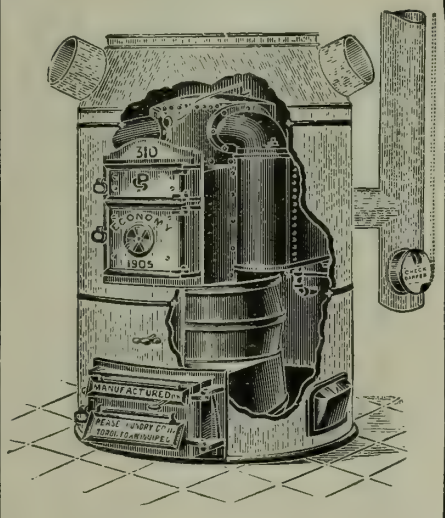
Of Caverhill, Learmont & Co., Retiring President of the Montreal Board of Trade.

of Trade. In 1906 he was chosen vice-president by acclamation, last year first-president, and now the final honor has been conferred upon him, also by acclamation. Mr. Drummond has been away from Montreal for some time on a visit to Europe. He sailed from Liverpool on his way home on Wednesday.

The First Cost



of a furnace is not half so important as the **Working Cost.**

Remember if the furnace you sell and install does not give satisfaction the customer will hold you responsible.

We do not claim

ECONOMY

Furnaces are the cheapest on the market, but rather the best, and in being the best they are actually the cheapest.

"ECONOMY FURNACES"

Cost More to Buy

BECAUSE they are made of more metal and better metal than the "cheap" kinds.

"ECONOMY FURNACES"

Cost Less to Keep

BECAUSE with ordinary intelligent care they will last longer than any other make on the market.

BECAUSE with their non-contracted castings and large surface they can supply more warm air on a smaller consumption of fuel.

BECAUSE they give better service with far less time and trouble for firing, cleaning or repairing.

An agency for Economy Heaters is considered (by those who know) to be their most valuable asset.

Practical Talks on Warm Air Heating

The Twelfth of a Series of Articles by E. H. Roberts.

Warm Air Heating Plant for Church.

The fact that most of the mistakes in furnace heating come from a failure to grasp the fundamental principles of warm air circulation is illustrated by the following letter from a dealer in a Western town:

Gentlemen,—There is a Catholic Church here to be heated by a warm air furnace, and we are mailing you blue prints under separate cover. Only the auditorium requires heating, and we wish to set the furnace as near the centre of the building as possible, with warm air registers in each corner and cold air returns from both ends of the building. Please send us working plans and estimate of cost for your—Furnace and all necessary materials by return mail, if possible.

On examining the blue prints, we found that the building was 100 feet long, the width at the entrance 32 feet and at the sanctuary 42 feet, with an average height to ceiling of 23 feet. Of course, the dealer's idea in placing the warm air registers in the four corners of the auditorium and the cold air faces at the extreme ends was to produce an even temperature; but a little thought on the subject ought to convince anyone that the arrangement suggested would not secure the desired results and would certainly render the furnace comparatively inefficient.

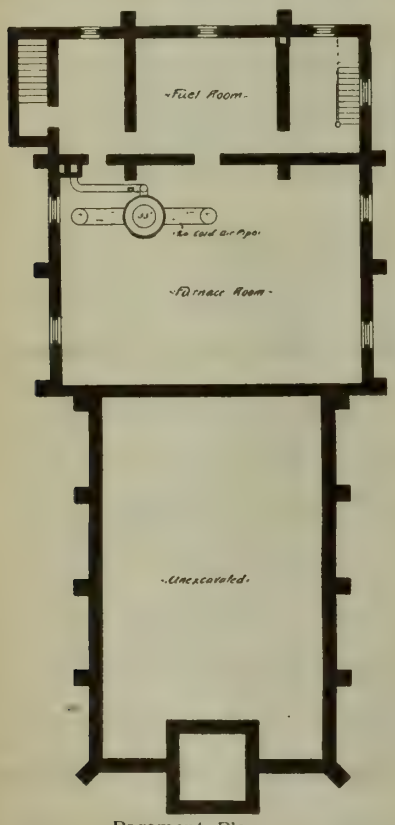
Circulation Would Be Slow.

If the furnace were placed in the centre of the building and warm air connections made with registers in the corners of the auditorium, the warm air pipes would be at least 36 feet long and the cold air returns about the same length. Now as the evenness of the temperature in a room like this is determined almost entirely by the rapidity of the air circulation, and the circulation depends upon the elevation of the warm air pipes and the strength of the cold air supply, it is apparent that the circulation in this case would be very slow indeed, and it is equally certain that most of the heat generated by the furnace would be lost by friction and radiation in basement.

But there is still another and very important reason why a plant installed in this manner would not prove successful.

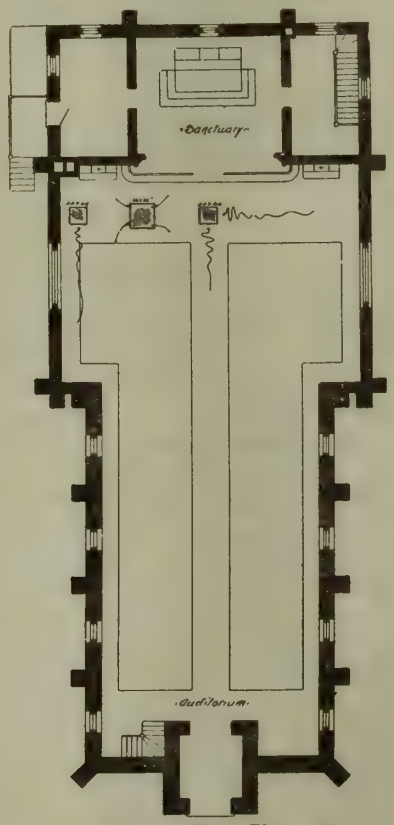
All along the walls of the building the air is falling as it comes in contact with this exposed surface, and the current of descending air would conflict with the ascending current of warm air if registers were placed near outside walls, and a very sluggish movement would inevitably result.

Simplest and Most Economical Method.



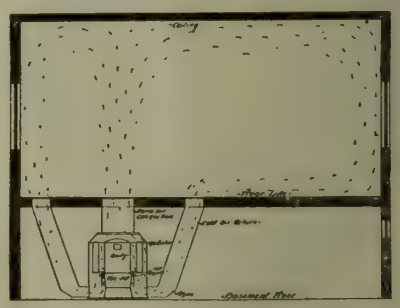
The accompanying drawings show the floor plans of the church in question and indicate the simplest and most economical method of heating the building. The warm air register is shown directly over the furnace, so there will be nothing to interfere with the freest possible delivery of heat into the auditorium, and the cold air returns are almost equally direct.

There may be a question in the minds of some, however, as to whether a furnace placed in this manner will heat the farther corners of the church as thoroughly and evenly as a furnace having the long warm and cold air connections. To make it clear that a furnace placed according to accompanying plan will produce an even temperature, we have made a detail, showing, in a general way, the circulation of the air in a plant similar to the one recommended for this building. As noted by the arrows, the warm air from furnace chamber passes straight up through warm air register and gradually diffuses as it approaches ceiling, then follows along ceiling to outer walls, where it gradually descends to replace the air which has been cooled by contact with the exposed surfaces.



Continuous Current of Heated Air.

This descending air, as you can readily see, is not cold air, at least not after the furnace has been in operation a short time, although it is cooler than the air coming directly from furnace, and the effect of this circulation is to envelop the whole interior of the building in a continuous current of heated air that warms the room just as the Gulf Stream warms the countries with which it comes in contact.



Now in regard to cold air returns: we advise short ones wherever practi-

Basement Plan.

Ground Floor Plan.

Detail Showing Circulation of Air.

cable, for three reasons; first, the cold air will circulate through short vertical or oblique pipes more rapidly than through long, horizontal ones; second, the air which is carried back to the furnace is not, as we have seen, cold air, although it is cooler than the air that comes directly from the furnace; consequently, by placing the cold air faces at the extremities of the room you would lose the benefit of considerable warmth from this returning air and you would increase the amount of space to be heated by just the capacity of the ducts; third, the long cold air ducts add very materially to the cost of the plant, besides increasing the chances for air leakages, and are apt to spoil the basement for purposes for which it might be wanted at some future time.

There are, of course, places where long ducts are unavoidable, for in order to get satisfactory results from short cold air connections it is necessary to have an open room with no obstructions that will prevent the free circulation of the air along the floor. Even a gallery at one end of the building may necessitate a long air duct in order to get the proper circulation, unless there is a stairway connecting it with the auditorium proper or registers in the gallery floor that will allow the descending currents to pass through.

By placing the furnace as shown on our plan there is also the advantage of a short smoke pipe connection, and the value of this can hardly be estimated, for unless the draft of the furnace is good, it is impossible to get satisfactory results, no matter how good the furnace nor how carefully the plant is installed.

Hardware Letter Box

Any questions on trade subjects will be answered by the editor in this department. Do you want any address, any special line of goods, anything relating to the hardware trade? Ask us. Letters from manufacturers, jobbers, travelers, retailers or clerks are solicited. Suggestions for trade improvement or discussions on trade evils are invited.

Tinned Steel.

Taylor Bros., hardware merchants, of Carleton Place, write: "Do you know any person in Canada stocking tinned steel suitable for making cheese hoops and pressed bottoms for the same?"

Answer.—A. C. Leslie & Co., and B. & S. H. Thompson, Montreal, and the following firms in Toronto carry a line of tinned steel suitable for your needs. McClary Mfg. Co., Kemp Mfg. Co. and Samuel Benjamin Mfg. Co.—Editor.

Fire Escapes.

J. H. Black, Cobalt, Ont., writes:—"Let me know the address of a firm making iron ladders and fire escapes, suitable for use in hotels."

The Dennis Wire & Iron Co., London, Ont., make a high-class fire escape and ladder which we think will meet with your approval.—Editor.

Church Bells.

Nichol Clink, Arbaka, Man., asks for name of firm who can supply metal church bells.

Answer.—James Morrison Brass Mfg. Co., Toronto, handles a large variety of this line of goods.—Editor.

A Suggestion

You will find it pays to keep some sort of a "perpetual inventory" of your paint and varnish stock. Stock is often scattered about, some on the shelves or floor, some in warerooms or basement, and some, perhaps, on display in your window. By having a record of just what is in stock, at your fingers' ends for daily reference, you will avoid the possibility of stock getting too low, or on the other hand, of ordering when you have sufficient on hand. It will save time in waiting on customers and be useful in many other ways.

A very simple method of keeping a record of this kind is to take large sheets of heavy paper or cardboard. Devote one or more sheets to

SHERWIN-WILLIAMS PAINT, PREPARED, (S.W.P.)

Rule sheets into squares. Head the columns across the top with size packages—Qts., ½ Gals., Gals., 5s, etc. Down the left edge insert the name or number of shade—394, 462, 481, etc. Enter in each square the quantity of that particular kind you have in stock. When you sell a bill of goods deduct the amount sold. When you buy a bill of goods add the quantity bought, upon arrival of goods.

Make up similar sheets for every piece of goods you carry—varnishes, shelf goods, specialties, etc. With some of the items several may be included on one card.

We want to do everything possible to help all S-W. Agents in handling their business advantageously and believe this suggestion will be of value to some of our agents.

Importance of Perfect Ventilation

An Article by R. C. Fay Treating of the Relationship Between Pure Air and Proper Heating—How the One May be a Detriment to the Other.

The writer recently took occasion to show, if possible, the great responsibility which is assumed by the builders of to-day, when erecting modern buildings for either domestic or commercial purposes. During the course of an article, the question of ventilation was given more or less attention, bringing to the reader's notice sentences where the health, and often the life of tenants, hinged on the ventilating methods employed.

If a person were compelled to breathe the same air over and over again, it would rapidly become unfit for use and dangerous to life. There are organic substances given off in respiration which are poisonous when breathed again, consequently proper precautions must be taken to provide constant change of air. It is easier to ventilate ordinary dwellings, as the fresh air finds its way in through walls, joints, around windows, doors, etc., but in large buildings, schools, churches, theatres, etc., a constant supply of fresh air must be provided, thoroughly warmed, by the heating apparatus, to the proper temperature.

One of the best and most widely known methods of ventilation is embodied in the direct-indirect radiator.

This indirect radiator is one of the greatest inventions of the age ; the cold fresh air from the outside being brought into the radiator case, where it is thoroughly warmed, and emitted from the fresh air register, supplying a constant stream of warm, fresh air, and at the same time promoting perfect health among the occupants of the building.

The box or case enclosing the radiator is made of seasoned wood, lined with asbestos and bright tin. The sides of the box almost touch the ends and sides of the radiator, so that the cold air getting in through the duct is compelled to pass up through the sections of the radiator on its way to the rooms above. In the construction of the air duct, care should be taken to provide a slide as shown in the accompanying illustration, so that the air may be cut off, when the radiator is not in use.

Another efficient form of ventilation is made possible by converting any radiator into a direct-indirect radiator by means of a cast iron box base shown in the above illustration.

The mission of the direct-indirect or ventilating radiator is the same as the indirect radiator, namely, to permit the operator to supply plenty of warm, fresh air, forcing out the impurities which are naturally present in the rooms above. The box base to be efficient should be equipped with a device so that either the bottom or back inlet can be used.

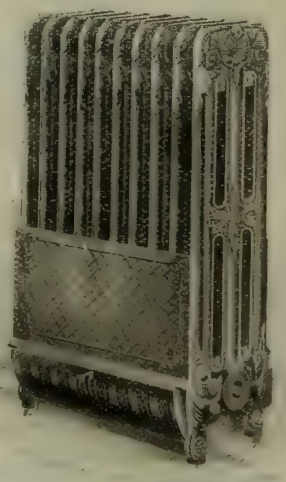

Fig. 2—Illustrating Conversion of any Radiator to Direct-Indirect Type.

The wall box, or fresh air inlet, as illustrated above, is placed on the outside of the wall, and is equipped with a close meshed brass cloth which prevents leaves and other foreign matter from interfering with the passage of fresh air through the air duct into the box base.

There are two ways of moving air for ventilating purposes ; first, by expansion due to heating, second, by mechanical means.

We have considered the former method (by heating) in the preceding paragraphs, but ventilation by mechanical means is of equal, if not greater importance, as the erection and construction of buildings often interfere with these methods.

Ventilation by mechanical means is accomplished either by pressure or by suction. The object in either case is the same, namely, to supply fresh air of the proper temperature

The air inlet, wherever possible, should be located in or near the ceiling of a room; the advantages to be gained by such construction are many, but space only permits mentioning the most important. The warm air displaces the impure air, and gradually the room becomes filled with pure fresh air, the cooler air sinking to the bottom, where it is taken off by the ventilating shaft.

When the air inlet is placed in or near the floor it acts as a receptacle for dust from the room, and a capital place for the breeding of microbes.

The outlet for air in the above construction should be placed as near the bottom of the room as possible, connected with a flue of ample size and kept at a temperature higher than that of the surrounding air, unless mechanical circulation is used, when the natural pressure will keep up the necessary circulation.

The extraction of impure air by fans has many advantages, as, when they are used as the extracting forces, the draft is very easily regulated simply by altering the speed at which the fan is driven.

In passing through the aisles of a large manufacturing plant one does not have to be a student of humanity to observe the drawn, peaked faces of boys and girls who are operating the machinery, or doing "piece work." Possibly a casual observer will attribute this condition to long hours, another to their work, and still another to diseases firmly implanted in the bodies of these workers. It may be one cause, or it may be another, but if the true facts were known, the secret of the suffering of these workers lies, many times, in the poor ventilation and the lack of sunlight in the factory room where perhaps hundreds of girls and boys and men and women are breathing the same air over and over, the only relief being from an open window, the draft from which causes disease and is eating the life out of the misguided individuals who remain in its path because of the fresh air thus obtained.

It would be hard to reckon how many deaths annually can be laid at the door of commercial enterprises where little or no thought is given to the "importance of ventilation."

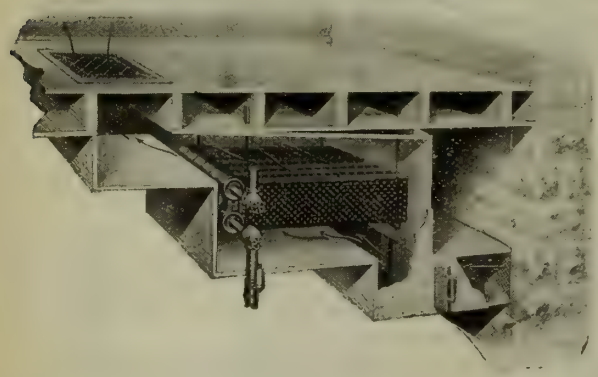

Fig. 1—Showing Installation of Direct-Indirect Radiator.

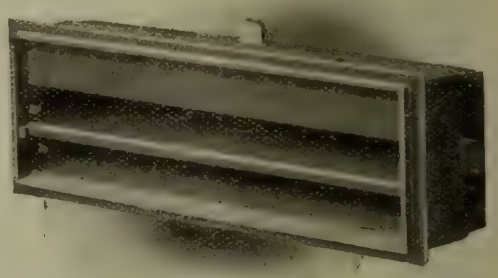

Fig. 3—Wall Box or Fresh Air Inlet.

Trade Announcements

Catalogues, booklets and other printed matter issued by manufacturers, jobbers, etc., for distribution to the retail trade will be reviewed in this department. Senders of catalogues, etc., for review should draw attention to new lines and retailers, when sending for samples, etc., should mention this paper to show that they are in the trade.

Advertising St. John.

The St. John, N.B., Board of Trade has issued a magnificently gotten up book describing and illustrating the manufacturing and commercial possibilities of the progressive Maritime port. The cuts are exceptionally fine, and from them a good idea can be gleaned of the industrial activity going on, and the splendid location and dock facilities of the city. The purpose of the book is to set forth the exceptional advantages possessed by St. John ; not only in situation, but in its facilities for receiving raw materials, and distributing the manufactured product, its climatic advantages for securing the most productive labor, and the safety of capital invested. The various points enumerated here are set out in convincing detail, and the illustrations lend additional strength to the statements. The following firms are represented by interesting cuts : E. Partington Pulp and Paper Company's mills; Stetson, Cutler & Co.'s lumber mills; Portland Rolling Mills; James Pender & Co.'s nail works; Maritime Nail Company; St. John Iron Works; T. McAvity & Sons' iron works and brass works; T. S. Simm's brush factory; Christie Wood Working Co.'s plant; Lawton Co,'s planing and molding mill; James Fleming's foundry; Jas. Robertson Co.'s works; C. H. Peters. Sons' tannery; Cornwall Cotton Mills ; York Cotton Mills; J. E. Wilson, foundry; Hamm Bros., biscuit manufactory; the White Candy Co.; Rankine, biscuit works; St. John Milling Co,'s mill; D. F. Brown, paper box and paper company; Murray & Gregory's lumber mills; Campbell Bros,, axle and edge tool works, and the Canadian Bank Note Company. Among the many fine views of the city is one of the harbor taken from the Emerson & Fisher building.

The Frost Company's Products.

The Frost Wire Fence Company, Hamilton, have presented their annual catalogue to the trade. The book is an attractive and well compiled type and shows half-tone engravings of the different fences and gates made by the above company. The cover is particularly attractive, containing a farm scene with a sample of the "Frost Fence" enclosing a pasture in which may be seen a herd of cattle against a background of trees. The Frost Company's goods are seasonable at this time and dealers will receive a copy of their new catalogue on request by mentioning this paper.

Samples of Tile Flooring.

The Barton Netting Company, Windsor, Ont., offer to the trade a new catalogue and tile samples. These will be sent to dealers on request by mentioning this paper. The Barton Netting Co. is an old-established Detroit house and feeling that the interests of their Canadian business needed a separate branch the company has been incorporated with headquarters at Windsor.

ROOFING

Fire, Lightning, Rust and Storm Proof.

BUILDING AND INDUSTRIAL NEWS

For additional items see the correspondence pages. Information is solicited regarding building and industrial news, the incorporation of companies, establishment or enlargement of mills, factories or foundries, municipal water works and sewerage systems, railway or mining news, etc.

Industrial Development.

By paying attention to harbor improvements at Port Stanley, the customs receipts at that port have increased by $80,000 in the past five years.

The summary report of the geological survey for the past year was presented to parliament last week. Reports show the various discoveries and indications point to a many deposits in the western provinces so far unsurveyed.

Guelph wants additional buildings for the accommodation of the annual winter fair. The city favors the erection of steel and cement buildings at a cost of between $20,000 and $30,000. A delegation will be sent to Ottawa to interview the Dominion Government.

New Liskeard is experiencing some difficulty with the new waterworks system. A pressure of 200 pounds to the square inch, which was put on the pipes proved too much and a number of joints blew out. The citizens are satisfied with the water supply which has to date been very limited.

Owing to the scarcity of pig iron the steel plant at the Canadian Soo will close down for an indefinite period. Nearly the whole staff of workmen will be kept on, however, making repairs and alterations that are deemed necessary. The blast furnaces will be kept working at their fullest capacity.

John R. Ralston, of Toronto, has written the Brantford council asking what inducements this city can offer to an industry to be established for the manufacture of all kinds of glassware. The industry in question would have a pay roll of $1,175 per week and the writer states would employ a considerable amount of hands.

At the annual meeting of shareholders of Alex. McArthur & Co., mfrs. of paper and roofing materials, Montreal, the reports showed the affairs of the company to be in a satisfactory condition. The following directors were re-elected : Colin McArthur, D. J. Munn, F. Robertson, C. P. Tucker, E. J. Rowlands. At a meeting of directors, held immediately afterwards, the following officers were appointed : President, Lt.-Col. C. McArthur; vice-president, D. J. Munn; secretary-treasurer, E. J. Rowlands.

The Fordwick Company has transferred to the Vulcan Portland Cement Company a large block of land in Longue Pointe, Que., with buildings, plant, and machinery thereon. The construction of the plant has been in the hands of the Fenwick Company, the present registration being the formal transfer of that portion of the work completed. The construction started in November, 1906, and it is expected that the plant will be in working order by May. The concern, it is said, will give employment to 400 men.

The Kootenay board of trade at its annual meeting at Nelson, B.C., passed a resolution in favor of the lead bounty applying when the price of lead is no higher than £16. S. S. Fowler, in support of the change, said many properties could not ship profitably at less than £18 and, moreover, the British Columbia mines even at that price, did not get as high a price for their product as did the United States. The Trail board had endorsed the resolution as coming from Nelson on this matter, recommending, however, that a bounty on lead under £18 instead of £16 be asked for. He therefore moved that the modification of the Nelson resolution made by Trail be endorsed. After some discussion the motion was passed unanimously.

Railroad Construction.

Arrangements are being made by the G.T.P. for the construction of a large hotel at Prince Rupert, the building to cost a quarter of a million dollars.

During 1907 the total number of miles of track laid reached the figures 1,099. It is estimated that there are 3,000 miles of track under construction in Canada at the present time.

The lack of railroad ties is holding back the construction on the G.T.P. Of 5,000,000 ties contracted for only about 500,000 have been delivered so far. This number is said to be sufficient for laying 40 miles of tracks.

A large amount of bridge work is contemplated on the main lines of the C.P.R. and in British Columbia, where many wooden bridges will be replaced by modern permanent structures. A large amount of money will be spent in replacing the old structures.

The work of double tracking the C.P.R. from Fort William west will be continued this year. A long distance has already been covered and it is the intention to push the double tracking to completion as rapidly as possible.

The Grand Trunk Pacific Railway has a very large programme of construction work laid out for the coming season, and judging from the present plans of the corporation, a large number of men will be required to carry out the work. The total amount to be spent this year in construction work is very large and, in fact, it is the intention of the company to do as much as possible. Work will be commenced just as soon as the season opens and the present outlook is that there will be plenty of work at railway construction at least in Western Canada during the coming summer.

Building Notes.

A. Hutchins, Toronto, will erect brick dwellings to cost $7,000.

Harris Abattoir, Toronto, will build a water tank at a cost of $3,000.

J. H. Smith, Toronto, will erect a two-storey brick factory at a cost of $10,000.

W. S. Thompson, Toronto, will erect a brick row of stores and dwellings to cost $18,000.

J. H. Smith, Toronto, will erect a two-storey brick factory in the spring, at a cost of $10,000.

The Gendron Manufacturing Company, Toronto, contemplates alterations on their factory at a cost of $12,000.

The Dominion Government will spend $100,000 for a new post office and customs office at Saskatoon during the year.

The Ontario government will build a galvanized iron experimental plant on Clifford Street, Toronto, at a cost of $3,000.

London is to have one additional fire hall, situated in the northern part of the city, to be erected at a cost of $19,000.

The Imperial Trusts Company of Canada contemplate building an office building in Toronto at a cost of from $35,000 to $40,000.

The contract for the new observatory to be erected at Toronto has been let to Brown & Love, Toronto. The contract price named is $90,000.

The Canada Railway News Co. will erect a hotel at Norway Point, Lake of Bays district. The new hotel will be up-to-date in all respects and will be opened about June 1.

Excavation has been started for the James Morrison Brass Mfg. Company's new four-storey brick factory and warehouse, Toronto, which will be erected at a cost of $60,000.

A HARDWARE ENCYCLOPEDIA.

The Simmons Hardware Company, St. Louis, Mo., has just issued its complete catalogue, which has appropriately been styled "Simmons' Hardware Encyclopedia." This formidable volume contains, exclusive of inserts, 4,200 pages, with over 21,000 illustrations, and covers over 79,000 items. The book is clearly and conveniently indexed and is divided into the following departments : Tools and Farming Implements, Miscellaneous Hardware, Builders' Hardware, Harness and Strap Goods, Stoves, Tinware, etc ; Cutlery, Shears, etc.; Guns, Fishing Tackle and General Sporting Goods ; Bicycles and Bicycle Sundries ; Sewing Machines ; Baby Carriages, Refrigerators and Freezers ; Baskets, Reed Furniture, Brass and Iron Beds ; Lamps and Clocks, Cut Glass and Silver Plated Ware. Another department refers to what are termed mail order goods, including numerous lines, machines, etc., which a merchant might require for his own use or order for his customer, but would not be likely to carry in stock. Other valuable matter incorporated in the catalogue refers to advertising helps and supplies, electrotypes, etc., advertisement forms, window displays and suggested retail selling prices on Keen Kutter goods. From the statistics given above it might be gathered that the size of this publication is its salient characteristic, but such is not the case. Huge and substantial as it is, the book is even more remarkable for its exhaustive treatment of the many and varied lines with which it deals. It contains not merely general information, but minute and specific descriptions touching upon practically every detail concerning which a retail merchant or his customer could make inquiry. In fact, it amply merits the title of encyclopedia, which has been claimed for it, and can only command the unstinted admiration of the entire trade. It would be regarded with nothing less than wonder by any who were unfamiliar with the development of hardware cataloguing within recent years.

MONTREAL HARDWARE AND METAL DINNER.

The seventh annual dinner of the Montreal Metal and Hardware Association was held at the Forest and Stream Club, Dorval. J. R. Kinghorn, of the Montreal Rolling Mills, president of the association, was in the chair, and William Starke, of Starke-Seybold, in the vice-chair. The toast list was short, the various healths being greeted with brief speeches from several of the members. Songs and piano solos added to the enjoyment of the evening. A return to Montreal was made about midnight by a special Grand Trunk train. The members and guests attending were H. Allen, A. W. Allan, K. R. V. Andras, P. G. Buck, W. E. Buck, George Caverhill, Geo. A. Childs, Arthur Clift, Jas. Davidson, E. R. Dorken, H. W. Dorken, J. S. N. Dougall, C. H. Godfrey, W. J. Hayes, F. C. Hanson, J. H. Hanson, T. McHutchison, T. H. Jordan, G. A. Kohl, W. S. Leslie, W. McMaster, T. H. Newman, Gordon McT. Pyke, N. S. Reeder, H. Sclater, Frank Scott, Gordon Seybold, Col. Robert Starke, G. R. Starke, J. Stanley Cook.

WRENCH DISPLAY STAND.

How to properly display goods so to make the display attractive and at the same time to bring the goods before the

Attractive Stand for Displaying Wrenches.

user is always a problem with the merchant. The manufacturer who makes a large line of certain kinds of goods has the same problem confronting him. To bring the goods before the user in an attractive manner is the problem.

This problem has been solved in a very effective manner in the construction of a metal stand for carrying wrenches. This stand is capable of holding twenty different types and sizes of wrenches. The size of this stand is 17 inches high with a base 7 inches in diameter. The display stand is nickel-plated and highly finished and when it is mounted full of wrenches it makes a very attractive window or show case display.

This stand is being manufactured by the Frank Mossberg Co., of Attleboro, Mass., for the display of their wrenches, and is offered to the trade with their goods.

CEMENT WORKERS' TOOLS.

John Stortz & Son, manufacturers of cement workers' tools, have added to their extensive line, among others, the

Fig. 1.

following tools especially adapted for pavement work:

Fig. 1 shows an iron indentation or dot roller. These tools are used to give the pavements a pleasing finish and to prevent slipping in sleety weather. They are made in two sizes, 6 and 7½ inches, the indentation being made 7-16 and ½ inch from centres. An extension handle can be used in conjunction with the roller, where a long handle is desired, as a handle of any length can be attached thereto.

Fig. 2, shows an inside radius curb tool, or edger. This tool is especially designed to finish the edges of concave curbs, circular walks, etc., when the ordinary curb tool can not be used, but through its peculiar shape it can also be used for all kinds of curb or edge work. It is made in all the radii from ½-inch to 2-inch, and is finished in either bronze or iron. The handle is of hard maple and can not become loose and turn, as it is firmly held, not only by the screw, but also by lugs cast on the inside of the handle frame.

Fig. 3 shows their driveway impression frame, recommended instead of the ordinary hand driveway tools, especially where there is a large quantity of prevent horses from slipping or for ornamental purposes.

Their line of cement workers' tools, tampers, etc., is very complete. They will send their complete catalogue upon request, if Hardware and Metal is mentioned.

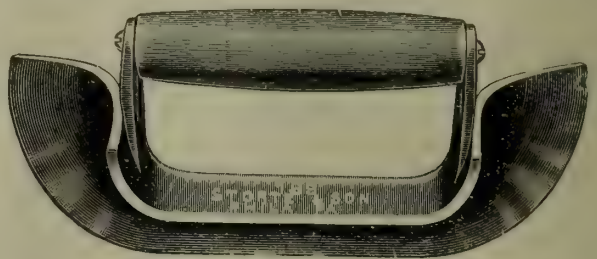

Fig. 2.

work to be grooved or impressed, as the tool makes twelve heavy impressions, $4^{3}/_{4}$x$4^{3}/_{4}$ inches with each impression, to

QUEBEC TRAVELING SALESMEN.

The second annual banquet of the Commercial Travelers' Association of the district of St. Hyacinthe took place on Saturday, Jan. 11, and was a great success.

Auguste Seguin presided, and with him were: Dr. St. Jacques, mayor of this city; Joseph Morin, M.L.A.; M. M. Maxwell Murdock, H. W. Wadsworth, secretary of the Dominion Commercial Travelers' Association; A. L. Friedman, treasurer of the same association, all of Montreal; J. Vanfelson, president of the Commercial Travelers of Quebec; M. M. J. N. Cabana, vice-president; J. C. Rouleau, secretary; Edmond Duckett, treasurer of the Commercial Travelers of St. Hyacinthe and others.

Mr. Seguin, in his annual address, recalled the fact that, though very young, the St. Hyacinthe travelers have already given proofs that they are strong, when they elected Mr. Duckett, as a director of the Dominion Commercial Travelers' Association.

TO PROTECT BRITISH CUTLERY.

The Cutlers' Company, the Chamber of Commerce, and the United Cutlery Council (representing the workmen) of Sheffield, have agreed upon a form of mark for the distinguishing of foreign made cutlery from that of British manufacture, and suggests an amendment of

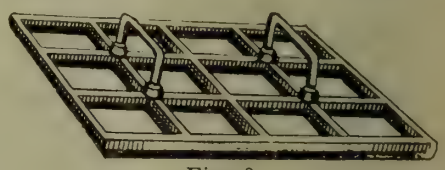

Fig. 3.

the Merchandise Marks Act so as to provide for the adoption of the proposed mark.

The mark decided upon by the Sheffield trades consists of the words "Not British," the word "not" being interwoven with the word "British" that it cannot be ground off a knife-blade by fraudulently-disposed persons.

Paint and Oil Markets

TORONTO.

Toronto, Jan. 25.—A marked change has passed over the paint markets during the past week and jobbers in local centres are experiencing the revival of business we predicted in the previous issue. The commodities used for the manufacture of paint are all beginning to move, the reasons for which are significant. During the fall of 1907 little booking for future delivery was done by any of the Toronto houses and in consequence stocks, especially in the rural districts, are very low at present and the orders for replenishing are beginning to come in.

Turpentine and white lead have furnished several surprises during the past week and in the case of the former an advance of from 2 to 5 cents has taken place. White lead remains unchanged but it is believed in local circles that the bottom has been reached and that an advance in quotations will take place in the near future.

There is every prospect of a busy spring season, jobbers being of the unanimous opinion that this week's business compares favorably with the same date last year.

Turpentine—Owing to the sudden advances in Savanna, importers have been buying sparingly, it being generally believed that the price would soon recede. The outcome of the cautious buying has made turpentine a scarce article in Toronto and though a small shipment is expected to arrive shortly the situation will not be cleared for some time. The market has remained steady during the past few days, but an advance of five cents marks the extent of the fluctuations of the past week. We now quote: Single barrels, 75c; 2 to 4 barrels, 74c. Less than barrels, add 5c per gallon.

Linseed Oil—There is a fair demand for linseed oil at present and quotations remain steady. An advance is confidently expected in local jobbing circles, as the English oil would cost more in car lots at Toronto than the price quoted on single barrel lots. We still quote: Single barrels, 60c; 2 to 3 barrels, 59c; 4 to 9 barrels, 58c. Add 3c to this for boiled oil, f.o.b. Toronto, Hamilton, London, Guelph and Montreal. Terms, net, 30 days.

White Lead—During the week an increasing demand has been noted for this commodity and though prices remain unchanged, an advance is predicted. Some local jobbers have, when feeling for trade, done some price cutting, but with the market in its present condition there will likely be very little doing along this line. Prices are as follows: Genuine white lead, $6.75; No. 1, $6.50.

Red Lead—Since last week prices have remained firm, and the demand is beginning to assume spring proportions. The bottom of the market is felt to have been reached and a small increase over present quotations is expected. We quote: Genuine, in 100 lb. kegs, $6; Genuine in 560 lb. casks, at $5.50; No. 1, $5.

Petroleum—The demand is fairly steady at present and no change of prices has occurred. Quotations remain: Prime white, 13½; water white, 15, and Pratt's astral at 17½c.

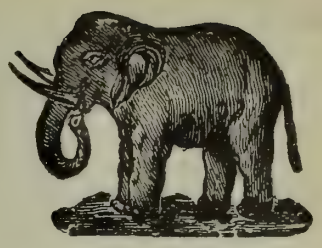
Glass and Putty—Glass is moving quite freely and the demand for putty is beginning to be felt in local circles. Prices remain unchanged. Bladders, $1.95 per 100 lbs.; less than barrels, $2.10 per 100 lbs.

Shellac—The shellac market is steady at present. With no change in quotations, the demand is fair for this material. The following prices prevail: Pure white, in barrels, $2.25; pure orange, $2, and No. 1 orange, $1.

Varnish—The demand for varnish remains steady. Small orders alone are being booked. Quotations are as follows: No. 1 furniture, in barrels, 65c; elastic oak, in barrels, $1.25; light hard oak, in barrels, $1.05.

MONTREAL.

Montreal, Jan. 24.—This week has shown a very material change in the situation, and orders are now coming to hand in quite a satisfactory way. It would appear as if the turn of the year had dispelled the uneasiness which marked trade during the closing months of 1907, and a good spring demand is expected. As far as can be ascertained, stocks of paint and oils in the country are very light, so that the re-establishment of confidence in the general situation of the country will cause an earlier demand than usual.



Linseed Oil—Linseed oil is practically without change, the fluctuations in the primary markets being insignificant. Prices are holding after last week's shading, and we quote: Raw, 1 to 4 barrels, 57c; 5 to 9 barrels, 56c; boiled, 1 to 4 barrels, 60c; 5 to 9, 59c.

Turpentine—The recent advance in this article in the primary markets is thought, in well informed quarters, to be too sharp, and that a reaction is more than probable. Consequently, local dealers have not advanced prices so far. However, if the increase is maintained for a few days, new prices will be in force shortly. At present we still quote: Single barrels, 70c; wood distilled turpentine, pure, 64c.

Ground White Lead—It seems to be the general opinion that prices have touched bottom, and with the revival of business figures are likely to advance in sympathy with the raw material. We quote: Government standard, $6.50; No. 1, $6.25.

Red Lead—Prices are steady after the recent fall of ¼c, and are expected to show a reviving tendency now that the raw market is improving. We continue to quote: Genuine red lead, in casks, $5.75; in 100-pound kegs, $6; in less quantities at $6.75 per 100 pounds. No. 1 red lead, casks, $5.50; kegs, $5.75, and smaller quantities $6.50.

Dry White Zinc—This line continues in small demand. Owing to light supplies, prices are maintained as follows: V.M. Red Seal, 7½c; Red Seal, 7c; French V.M., 6c; Lehigh, 5c.

THE DEPTHS OF HUMAN FOLLY HAVE NOT BEEN REACHED IF ANY ONE DECLARES THAT THERE IS A BETTER WHITE LEAD THAN THE

"ELEPHANT" GENUINE

THE STANDARD FOR OVER FORTY YEARS.

. . . . . .

PAINT MAY COME AND PAINT MAY GO, BUT THE "ELEPHANT" BIDS FAIR TO "GO ON FOREVER."

Address the Paint Providers:

THE CANADA PAINT COMPANY LTD

White Zinc Ground in Oil—There is nothing to note in this market. The demand is steady, and prices are firm. We quote: Pure, 8½c; No. 1, 7c; No. 2, 5⅜c.

Varnishes—Varnishes are generally in good demand at present owing to unusual activity in some of the large consuming factories.

Putty—Putty is still in light demand, but a continuance of the fine weather will soon bring about a change in this respect. Prices remain at: Pure linseed oil putty, bulk, in 800-lb. casks, $1.75; in 25-lb. iron drums, $2.05; in 25-lb. tins (3 in a case), $2.15; bladder putty in barrels, $1.95.

ELBOW GREASE AND PAINT QUALITY.

Retailers of paints are frequently asked the question, "How should the consistency of paint be varied for the different surfaces?" A noted paint authority answers this as follows:

The painter should understand these requirements. The priming coat, being the one on which the adhesion of the entire paint film depends, should be most carefully considered. It should be sufficiently liquid to penetrate every pore and irregularity of the surface, carrying with it particles of the pigment; but this fluidity must not be obtained at the cost of the future strength of the dried film. For the priming coat it is customary to add a quantity of oil and some turpentine or benzine. It is easy to overdo both. Only enough of the volatile thinner should be used to avoid a high gloss, to which subsequent coats will not readily adhere. Hard, unabsorbent woods require a thicker priming coat than spongy woods, such as poplar, soft pine, etc. Resinous woods, like yellow pine, again, require special treatment—a preliminary varnishing of knots and resinous spots with shellac, and subsequent priming with a fluid priming coat containing an excess of turpentine.

The second coat, which in many instances is also the finishing coat, should be tempered accordingly. If there are to be three coats, the paint should be slightly reduced with turpentine or benzine, so as to promote amalgamation with the priming coat, and to reduce the surface gloss. If it is to be the finishing coat, prepared paint of the average consistency can be used without reduction, but a very little turpentine is sometimes desirable to assist penetration and adhesion.

The third or finishing coat should usually be employed as it comes from the can. In the case of all coats, thorough, hard brushing is essential, and a round brush is always preferable to a flat brush. The failure of paint is frequently due to insufficient "elbow grease" with the brush.

Every coat of paint should be completely dry throughout before the next coat is applied; but it is a mistake to allow a priming coat to "weather" and become weakened before painting is continued.

Too much drier or japan, or cheap rosin japans are at the bottom of many paint failures. The manufacturer of a scientifically prepared paint will introduce the proper kind and quantity of driers into his formula, and none should be added in use.—The Hardware Trade.

A Paint Catechism

By G. B. Heckel.

63. What is meant by covering upwards of 300 square feet two coats? These specifications all refer to paints applied to wood. This specification means that each gallon of paint, to be satisfactory, should cover properly with two coats upwards of 300 square feet of surface. The covering power of strictly pure white lead paint under duplicate conditions seldom exceeds 250 square feet.

64. What is meant by producing a surface that is neither too hard nor too soft? A surface that is too hard is subject to abrasion, cracking and chipping off; a surface that is too soft is subject to removal by rubbing or scraping. This characteristic in extreme cases amounts to permanent stickiness; in another sense the phrase includes "chalking," which see.

65. What is meant by having an average life of four years? That, under average condition of surface, climate and exposure, repainting shall not become necessary for surface protection more than once every four years. In exceptional or favoring cases this life of a good paint may extend to ten or fifteen years. Except for uncontrollable circumstances it should not fall below three years. Strictly pure white lead paint, except in extraordinary circumstances, will not last over three years. It frequently perishes in less than half that time.

66. What is meant by —durable as to color?" That within the period fixed as to average durability of the paint, there shall be no marked change in the original color of the paint beneath any surface deposit of soot, dust, etc.

Strictly pure white lead not only darkens on exposure to the gases of the atmosphere, but it has a bleaching or discoloring action upon many pigments in daily use, such as Prussian and ultramarine blues, English and American vermillions and para-reds, etc. Even on many of the natural earth pigments it has a bleaching action.

67. What is meant by "leaving a surface suitable for re-painting?" That when repainting becomes necessary the remainder of the old paint will present a practically unbroken surface and permit of firm adhesion of the new coating.

68. How does paint disappear from a surface? It may chalk, peel, scale, flake or wear away.

69. What is chalking? Chalking is that quality (most characteristic of strictly pure white lead) which some paints have of disintegrating, falling into powder and dusting or washing from the surface irrespective of normal wear and tear. It is due to progressive chemical action between oil and pigment in the presence of oxygen, carbonic acid gas and moisture. The paint on a "chalking" surface will rub off on the clothing. Such paint has been included in the foregoing definition as "too soft."

70. What is peeling? Peeling indicates an imperfect attachment of the paint film to the surface. The term sufficiently describes the action. Any paint may peel if applied to a damp, greasy or resinous surface. Peeling may also be caused by interior artificial heat, driving moisture outwards under the paint film; by capillary moisture rising

into wood in contact with the earth, etc. Pure linseed oil paints are more liable to this defect than cheaper paints containing alkaline emulsions and water.

(To be continued.)

THE KENT OIL FIELDS.

The year just closed has been a banner year in the production of oil in Kent county. According to the best available figures, the total production for Canada in 1906 was 569,753 barrels. At that time Tilbury East was still in the embryo stage. Since then it has been on the ascendancy, while the other fields are stated to have been gradually falling off in production.

The following are the detailed figures for the Kent county fields, month by month, for 1907:

Month.	Tilbury East.	Romney.
January	29,172	2,871
February	26,098	5,939
March	29,600	11,104
April	31,055	9,685
May	35,004	5,534
June	35,654	3,163
July	34,000	1,600
August	31,925	300
September	32,489	700
October	25,936	1,000
November	27,394	2,000
December	21,342	2,000
Total	359,678	45,896

This makes a total production for the year 1907 of 405,574 barrels from the fields of Kent county, which are, as a result, rapidly eclipsing the historic Petrolea field in the matter of oil production.

The year has also been notable for the development of the gas field, the largest gas well in Canada, with a daily capacity of ten million cubic feet, having been struck on the Jackson farm, near Glenwood station. The new year has begun auspiciously with the striking of a 240-barrel well in the Staples district, in Tilbury West, quite close to the Tilbury East field.

WHITE LEAD SUBSTITUTE FOR PAINT OR PUTTY.

Tesseit proposes to replace white lead in paint and putty by utilizing the residue left in the sulphuric acid treatment of bauxite in the manufacture of aluminum sulphate. The composition of this residue varies according to that of the bauxite treated, but averages 40 per cent. of alumina, 10 per cent. of ferric oxide, 27 per cent. of silica, titanium oxide 18 per cent., and crystallized aluminum sulphate 5 per cent. It can be imitated by adding infusorial earth to a mixture of red and white bauxite. The residue, after being well dried, is placed in a ball mill, along with 40 per cent. of a drying oil, and ground to an impalpable powder, or rather paste, which can be reduced to a workable consistency for use as paint by adding a sufficient quantity of oil and driers, together with a little ochre to produce the desired shade. To make putty, the above paste is mixed with 1½ parts its new weight of paris white, crushed to powder in the ordinary manner.

A Good First Impression

is essential to future success. ELASTILITE VARNISH made a good first impression twelve years ago, because we made the quality then, and still continue to make it to create good first and lasting impressions.

Mistakes and Neglected Opportunities

MATERIALLY REDUCE THE PROFITS OF EVERY BUSINESS

Mistakes are sometimes excusable but there is no reason why you should not handle Paterson's Wire Edged Ready Roofing, Building Papers and Roofing Felts. A consumer who has once used Paterson's "Red Star" "Anchor" and "O.K." Brands won't take any other kind without a lot of coaxing, and that means loss of time and popularity to you.

THE PATERSON MFG. CO., Limited, Toronto and Montreal

HATCHETS.

THE STANLEY WORKS, New Britain, Conn.

FOR SALE BY LEADING JOBBERS.

Suppose

¶ Suppose that you could pick from all your possible buyers, those who are most progressive and intelligent, and get them together, once a week or once a month.

¶ Suppose that you could arrange to have the brainiest men in their line, give them fifteen-minute or half-hour talks on business matters of absorbing interest to them, and of intimate relation to your product.

¶ Suppose that you could then have them turned over to you, ready, willing, even anxious to hear you talk about your own product, and how it fits into, and is a part of, the progressive methods discussed in an impersonal and impartial way by the authorities who had already spoken.

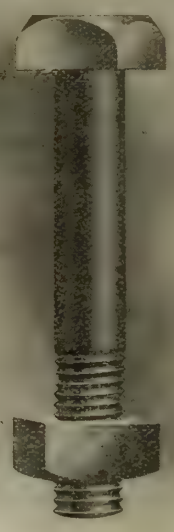
¶ Wouldn't you jump at the chance?

¶ You can do that very thing, in effect, through the trade and technical newspapers in your field, where your own talk is preceded and most favorably introduced by business information which is a business necessity, and which, tending to create a desire for modern methods, creates a desire for the specific information about your product which is presented by your "talk" a few pages over. In fact your advertisement, intelligently framed, becomes an essential part of that business information for which the present and potential buyers of your product are paying because they want it—because they must have it.

¶ Can there be any question about the value of intelligent advertising, intelligently placed in the trade and technical journals appealing only to the men to whom you must sell or sell not at all?

"Seeing is Believing"

¶ As the Ross Sporting Rifle represents the best in modern rifle manufacture, the highest grade materials and minute accuracy in workmanship, it is to your interest to learn fully about this Canadian Rifle—



¶ The Ross Straight Pull 303 Sporting Model M is one of our leaders to retail at $26. The barrel is the celebrated Ross high pressure, non-fouling, gun-barrel steel — The breech action is dependable.

Our representatives are now demonstrating the merits of this rifle—It places you under no obligation to drop us a line to make sure you will be on their calling list.

Our advertising policy is co-operative.

Something You Ought to Be Selling

The New Century method of washing has succeeded, not because of its ease, speed and simplicity only, but because it gives better results than are possible with any other method.

This machine has a wringer stand too, not a rickety affair, but a convenient, strong, rigid attachment, always in position, never in the way.

New Century Style "_ '

The experience is in the machine. You'll hear no complaints of it and have no excuses to make.

They are the best there is.

CATALOGUES ON REQUEST

American Twin Freezer

Freezes two flavors of Ice Cream or an Ice or Sherbet and Ice Cream at one and same time, in one freezer.

SOMETHING ENTIRELY NEW —NEVER DONE BEFORE.

THE can is divided in two parts by a vertical partition. One flavor is placed in one, the other in opposite side of can, in each of which the scrapers, etc., operate. The can cannot be turned as in old style freezers, because of the partition. It is therefore swung to and fro by a rocking motion of the crank. This is a more comfortable and much easier movement. It is very much less tiresome than turning a crank. One can sit back in a chair with freezer alongside and rock the crank to and fro without discomfort or undue exertion and even read at same time. Although two flavors are frozen at once and with less exertion, no more time is required than in old style freezers.

The **Pails have electric welded wire hoops,** which are guaranteed not to break or fall off; Cans are of heavy tinplate with **drawn steel bottoms** that are guaranteed not to fall out or break and do not leak, the strongest and most durable Freezer Can made; the **Automatic Twin Scrapers** by their positive action insure perfect scraping of frozen particles from side of can. All inside parts are heavily coated with pure block tin, and outside parts all thoroughly galvanized.

SOLD BY LEADING JOBBERS

Lawn Mowers

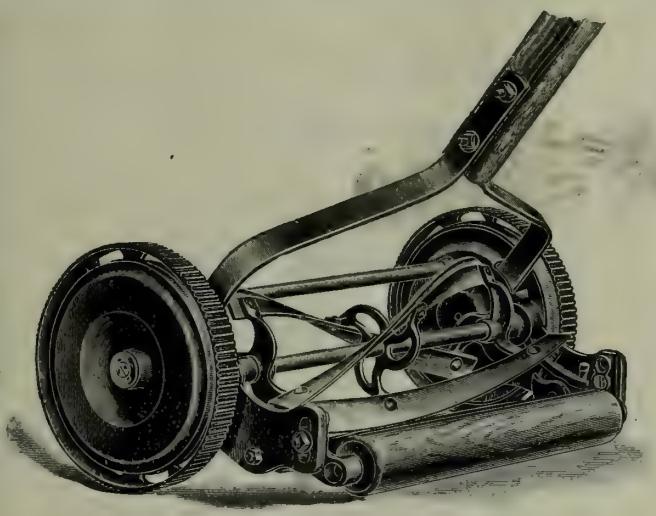
For the next few weeks watch this page weekly for pointers in Spring Buying.

We are exclusive CANADIAN AGENTS for the celebrated "NEW ENGLAND BALL-BEARING MOWER"

WE STOCK :

Maxwell's—8, 9 and 10½ inch wheel.

Daisy—8 inch wheel.



Star—9 inch wheel.

Woodyatt's—10½ inch wheel.

Townsend's Spider—This is a high-grade ball-bearing machine, stocked in 14, 16 and 18 inches only.

Townsend's Matchless and **Golf Mowers.**

Townsend's Horse Lawn Mowers.

"New England" Lawn Mower.

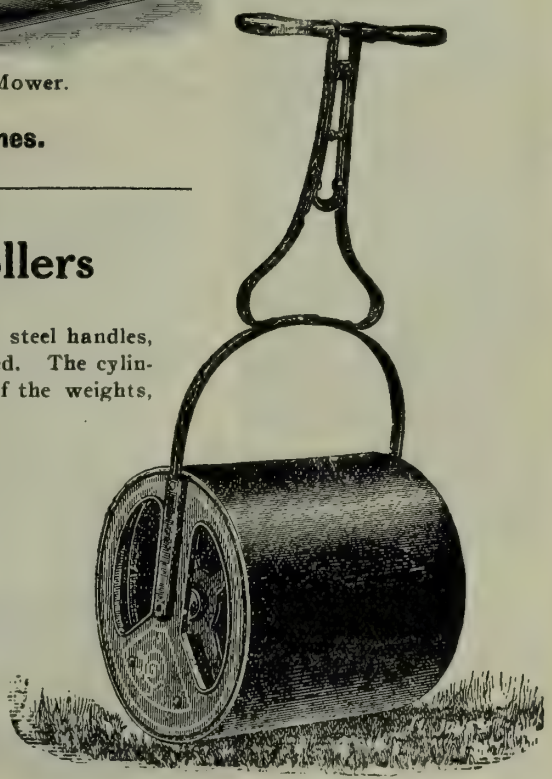
The "New England" Ball-bearing has 8 inch drive wheel, 1⅛ inch diameter ball races, ¼ inch tool steel balls. Fitted with patent cone adjustment, which cannot work loose. Cones are hardened and ground. Has three tempered tool steel knives. Three sizes, 14, 16 and 18 inches. The best value and cheapest ball-bearing mower sold in Canada.

It will pay you well to get our prices on these lines.

Grass Catchers

Bieder No. 13—Adjustable to all high-wheel mowers of 24 inch and smaller. Bright striped canvas fitted to galvanized frame.

Ironclad No. 1—Adjustable to all high and low-wheel mowers of 18 inch and smaller. Bright striped canvas sides and back, galvanized iron bottom.



Triumph No. 1—Adjustable to 10—18 inch low wheel mowers. Bright striped canvas with galvanized frame.

Lawn Rollers

Fitted with cast iron roller, steel handles, all parts painted and striped. The cylinder revolves independent of the weights, which are located at each end, insuring a perfect balance and even distribution of weight. The handles always retain an upright position when not in use.

No. 1—20 inches wide, 20 inches diam., weight 265 lbs.

No. 2—20 inches wide, 20 inches diam., weight 360 lbs.

GRAHAM NAILS ARE THE BEST

Our Prices are Right

A TRUCK FOR EVERY PURPOSE

Boston Pattern

The Boston Pattern Trucks are made both in half and full strapped.

Weights from 30 to 105 lbs. according to No. and size.

A good truck for store or warehouse use.

Little Giant

"The Little Giant" Trucks are made very strong, and weigh but 12 lbs. An excellent Truck for handling boxes in shoe stores and groceries.

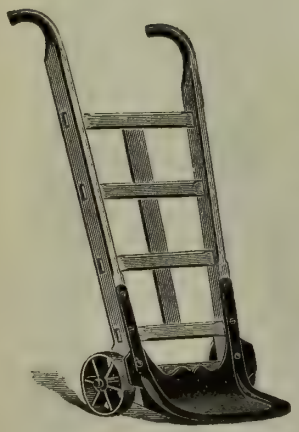
The Steamboat Trucks are fully strapped, making them extra heavy. Made especially for railroad and steamboat purposes.

Weight 130 lbs.

Steamboat Pattern

Western Pattern

The Western Pattern Trucks have forged axles, and are made with a steel nose. Supplied with iron or rubber tired wheels. Weights from 32 to 105 lbs.

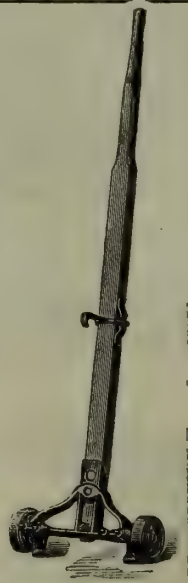


F. & W.

Barrel Truck

The Barrel Trucks are full bound and made with bent iron cross bars. Will stand a great deal of rough usage, and are best suited for factories.

Weight 75 lbs.



No. 41

Bag Truck No. 41 is made with bent handles, forged axles with turned bearings, and has a heavy cast iron nose.

Just the thing for handling flour or grain.

Weight 60 lbs.

Keg or Barrel

Kegs of nails or barrels of cement, plaster or paint can be handled more easily with this Truck than by any other made. Handle 60 in., wheels 5 x 1¼ ins. Weight 23 lbs.

No. 46 Bag Trucks are much lighter than No. 41, but are built very strong. They are used mostly for light work. Weight 27 lbs.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines These enquiries come from Wholesalers, Manufacturers and Retail Dealers, who usually intimate they have ooked through Hardware and Metal, but cannot find any firm advertising the line in question. In the majority of cases these firms are anxious to secure the information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay them to advertise in larger space.

OUR No. 1 SINGLE ARC
500 Candle Power

OUR No. 3 SINGLE ARC
500 Candle Power

OUR No. 2 SINGLE ARC
500 Candle Power

THE "S.S." GAS LIGHTING MACHINE—The only gas machine that runs without pumping under a uniform pressure. The only gas machine that will successfully operate one gas fixture if desired. The only gas machine that can be generated in thirty seconds and without the use of alcohol or liquid gasoline. The only gas machine with a safety vent and escape pipe. The only gas machine with an automatic governor. The only gas machine with a seamless generator and the only one withan entirely seamless copper tank.

THE "SYLVESTER" LIGHT—Increases the brilliancy 100 per cent. Decreases the operating cost 50 per cent. No globes to break or clean. No mantles dependent on wire or magnesian supports. Less heat than an electric arc and gives more light. No odor from unburned gas or the products of combustion. No sound from the light, absolutely noiseless. No shadows cast all light thrown down. No flickering, the only steady light upon the market. A gas fixture more ornamental and unique, has never been invented.

Not one drop of oil passes through a hollow wire. We can give you cheapest insurance.

THE "SYLVESTER" NEW PROCESS MANTLE. Shipped in an envelope. Upon removing from envelope, can be crumpled up without danger of breaking. When straightened out, it's just as good as new.

It Saves Lives

A Building Necessity

These are the names that have been made synonymous with the

AEOLIAN VENTILATOR

We are the manufacturers of it and control the patents.

We have placed it on some of the finest buildings in the Dominion.

It is a scientific fact that no modern building can afford to neglect sanitation.

We are contractors and sanitary experts. Our ventilator is guaranteed and is placed in position to suit the building as to quality and size.

One Testimony:

Montreal, June 12th, 1903
Canadian Pacific Railway Company.
Messrs. J. W. Harris Co., Limited.
7 St. Elizabeth St., Montreal, Que.

Gentlemen,—Answering yours of June 1st, I am not personally familiar with the merits of the "Aeolian" Ventilators but our Assistant Engineer, Mr. F. Crossley, reports that the Ventilators of this type manufactured by you and used by this Company at the Place Viger Hotel, Chateau Frontenac, Windsor Street Station and elsewhere, have proved satisfactory. Yours truly,

E. H. McHENRY, Chief Engineer.

The Long and the Short of It

"IT" MEANS

THE "LONG"

is the time it wears. It stands the test of heat and frost, wind and rain, and gives your customers many years of solid satisfaction.

THE "SHORT"

part is the time needed to put it on. A great deal of time—which means a great deal of money—is saved to the man who uses

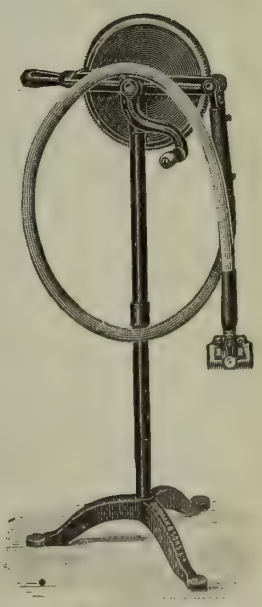
Have You Ever Noticed .

THE SILVER GRIND

THE ORIGINAL NEWMARKET CLIPPER.

which is such a striking characteristic of the **Newmarket Clipper?** It is a kind of whistling sound, and means Perfect Grinding, Perfect Balance of Cutting Tension, Perfect Bearing of Cutting Edges. This is



Handicraftmanship

pure and simple, and can only be obtained by skilled and experienced workmen, who have had the secret handed down to them from their forefathers.

We Hold That Secret

and this explains why our machines keep their edge so long, and will clip 3, 4 and 5 times as many horses as other makes.

We ask you to bear these facts in mind when placing your orders for the coming season.

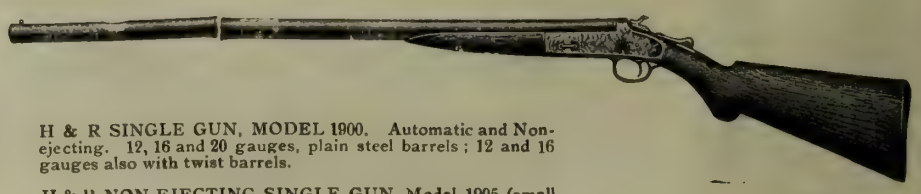
H&R

GUNS AND REVOLVERS

are profitable articles for you to handle, Mr. Dealer, because of the extensive advertising and the absolute satisfaction they have given to discriminating purchasers for over thirty-five years.

We are constantly impressing upon the mind of the public—your customers—the superiority of H & R Guns and Revolvers—the simplicity of construction, accurate and reliable shooting qualities, perfect balance and beautiful finish.

Our catalogue tells about our full line and gives valuable selling points.



WRITE FOR IT.

Here is the New Target Grip

The realization of a long-felt want. Light, compact, durable—the first combination of a medium-priced revolver with a perfect full grip. The extension hard rubber stock affords a perfect grip. It is fitted to the frame, and by having the regular stocks (furnished extra) can be interchanged for pocket use.

Our new grip prevents slipping and twisting, insures a positively secure hold, because it fits the hand naturally, insuring confidence, which means a steadier aim and greater accuracy in shooting.

H & R SINGLE GUN, MODEL 1900. Automatic and Non-ejecting. 12, 16 and 20 gauges, plain steel barrels; 12 and 16 gauges also with twist barrels.

H & R NON-EJECTING SINGLE GUN, Model 1905 (small frame). 28 gauge, 44 and 45 calibers, plain steel barrels.

Crain

The Totals Only of the Accounts Are Posted in the Ledger

The old, slow and laborious method of posting every item of an account from the day book to the ledger is agreeably missing in the Crain Monthly Account System.

By the Crain method the accounts are written up in duplicate daily from the counter check books or blotter—always up to date.

At the end the month, or other regular periods of rendering, the originals are torn out and sent to the customers, the duplicates removed and filed on a separate binder, and the *total monthly balance only posted in the ledger.*

Just think of that for economy of time and labor. Glad tc mail our folder, "The Retail Dealer's Friend," with complete information.

PROTECTION and SECURITY

For the Dealer Protection, For the Purchaser Security.

This is our 1908 program. Our Dealers in 1907 secured their choice of the Largest and Best Business. We do not worry about where they stand, but we fear that some Good Merchants do not know what great assistance we can and do give our friends. We are the Originators of the Protection Plan. Because it is a success, we of course have many imitators, but our Goods and Methods cannot be duplicated.

There will be much farm building done in 1908, by present indications. Get in line to look after your share. The best and surest way is to get in touch with us. A post card will do it.

"Sure-Grip" Shingles and "Galt" Corrugated Sheets combined with Galt Salesmen and Galt Methods will work wonders.

TRADE MARK

FOR CUTLERY

From Coast to Coast those who have sold "Dominion Ammunition" in 1907, have nothing but praise for it.

The quality has been unsurpassed, the margin of profit satisfactory and the demand, following the extensive advertising campaign and backed by quality of our product, moved supplies quickly and brought dealers cash instead of stock.

Is this a hint **to you**?

Why stock with many slow selling lines of Ammunition when "Dominion" gives satisfaction, is called for by almost all your customers, and gives you a satisfactory profit.

MORAL: "Dominion" for mine in 1908.

IF YOUR JOBBER WON'T SUPPLY YOU, WRITE US.

Dominion Cartridge Co., Limited, Montreal

SAVORY SEAMLESS ROASTERS

Retail Hardware Association News

Official news of the Ontario and Western Canada Associations will be published in this department. All correspondence regarding Association matters should be sent to the secretaries. If for publication send to the Editor of Hardware and Metal, Toronto.

THE COMING CONVENTION.

Place—Toronto.
Date—Feb. 12 and 13.
Headquarters—Palmer House.
Hotel Rates—$2 per day.
Hall—Palmer House Building.
Exhibits—Palmer House Sample Rooms.
Entertainments—Some surprises in store for delegates.
Executive Meets—Feb. 12, 10 a.m.
Convention Opens—Feb. 12, 1.30 p.m.
Convention Closes—Feb. 13, 5 p.m.
Question Box—This will be a feature at every session of the convention. Come prepared to take notes and participate in the discussion.
Railway Fares—Single fare on all railways, to Toronto, Feb. 11 and 12, returning up to Saturday, Feb. 15.
Other Attractions—Horse Breeders' Exhibition and Mendelssohn Choir Concerts.

CONVENTION PROGRAMME.

The programme for the third annual convention of the Ontario Association will be about as follows:

Wednesday, February 12, 10 a.m.—Meeting of the Executive. 1 p.m.—Enrollment of members, payment of dues, etc. (About two dozen members were enrolled at last year's convention. Let's beat this record this year.) 1.30 p.m.—Convention called to order by President. President's address, Secretary's report, Treasurer's report, amendment to constitution, appointment of committees on resolutions, nominations, legislation, grievance, etc., general business, question box discussion on general trade matters. Wednesday evening—Complimentary dinner.

Thursday, February 13, 9.30 a.m.—Report of committees, general business, question box discussion on matters relating to the business end of a hardware store. 2 p.m.—Photo of delegates, election of officers, question box discussion on matters relating to the hardware store, such as care and display of stock, fixtures, windows, etc. Adjournment.

THE QUESTION BOX.

I. W. Bennett & Son, Gananoque, have sent to the secretary a practical topic for discussion in the "Question Box" section of the convention, referring to the selling of stoves on the installment plan.

J. E. Westcott, Ailsa Craig, has forwarded another subject for discussion relating to syndicate store competition.

Another member has suggested that the subject of storing oil so interestingly discussed at the last convention, be again taken up.

These are practical suggestions, showing that the members are doing some thinking and will have some interesting questions to drop into the box on the president's table when the convention opens. It is planned to have the box opened at each session as soon as the scheduled business has been transacted.

Either A. J. Scott, Marine City, Mich., secretary of the Michigan Retail Hardware Association, or Porter A. Wright, Holly, Mich., vice-president of the same organization, is expected to attend the Ontario convention and conduct the "Question Box" discussion, as well as to give a talk on the value the Michigan Association has been to its 700 members during the past eleven years.

MERCHANTS GETTING TOGETHER

At a recent national retail hardware convention, writes "Hoop Iron," in the Iron Age, a delegate from one of the Western States was speaking on the subject of whether the word "dealer" or "merchant" should be used in the name of the association. He said that before the day of associations "junk dealers" would have been the most appropriate name for the hardwaremen of his State, but now, since they have had a chance to get together, there had been such a slicking up of stocks, and change in the method of bookkeeping and system of doing business, that he thought they might call themselves "merchants."

We must not delude ourselves with the thought because we are doing business in 1907 that we are superior business men to our daddies of 50 years ago. Some of those old merchants who went to New York twice a year to buy goods were merchant princes beside some of the woodchuck dealers who never get but a few rods away from their holes. The old-time merchants rubbed up against larger and better business heads during their trip and came home with broader ideas and better prepared to increase their prestige in business affairs.

In times of unusual conditions, for instance, like the present financial stringency, a hardwareman wants to consult with hardmaremen. He can read in his morning paper what leading business men say about the situation, which is good so far as it goes, but if he could get the ideas of half a dozen good, hustling hardwaremen in nearby towns or cities, he can make up his mind much better just how to handle his business in his own town.

The getting together is an absolute necessity to those who desire and expect to better their business conditions, as well as make better citizens, and have a broader understanding of matters and men.

SAVING ON INSURANCE.

The Mutual Insurance Committee will have something of interest to report at the coming convention. A firm of insurance brokers representing some strong companies, are willing to enter into a profit sharing arrangement on a very favorable basis to hardware merchants on certain conditions very easily arranged. The matter is not yet in definite shape, but sufficient has been done to warrant the statement that if the trade in Ontario takes hold of the good thing to be explained later, every hardwareman who places his insurance through the association will make a substantial saving without the investment of a single dollar.

Only members of the association, of course, will receive the benefits derived from this arrangement. Take hold and make the proposition a success.

SEE YOUR NEIGHBOR.

By the way, remember that we took in about two dozen members at last year's convention. We want to beat that record this year, and if you can prevail upon some neighbor who has never yet joined the association, to come to the meetings this year, you will be doing more good for the association than you can accomplish in any other way. If he comes he's pretty sure to join.

JOIN THE ASSOCIATION.

Because it will be the act of a sensible man who perceives the great value of trade organization.

Because it will help you through your difficulties, and protect you in time of trouble.

Because it will keep you directly in touch with your fellow hardwaremen, whose motto is "Defence, not Defiance."

Because the association does not support the wrong-doer, but safeguards the interests of the legitimate retailer.

Because you never know when you may need its aid.

Because the cost is small, and you are not a man to enjoy trade benefits at the expense of your fellow retailer.

Because in unity there is strength.

Because self help is the best help.

Because, by organization, absolute unity of action is assured, for the purpose of protection and defence, locally and nationally.

Because it facilitates inter-communication on all questions affecting trade, and insures the voice of the retailer being heard.

Because it watches closely, and opposes by every possible means, all measures calculated to injure the trade.

Effective Retail Hardware Advertising

Hardware and Metal's Holiday Advertising Contest Awards—Some Fine Ads., the Prize Winner being sent by Emerson & Fisher, St. John.

It's only natural that every human being who has a task to perform, should consider that his particular task is the hardest proposition anyone ever got up against. But you'll agree with us, nevertheless, that the task of judging The Hardware and Metal holiday advertising contest is the reverse of an easy one.

In response to our offer of a prize of $5 for the best advertisement of a hardware store, published during the month of December, many hardwaremen all over Canada sent in copies of their Christmas ads. These varied in size from full newspaper page down to 3-inch single column, and only the limitation of the space at our disposal prevents us treating all of them in detail for the benefit of all our readers.

One of the "runners up" in the Holiday Ad. Competition—Sent by A. W. Humphries & Son, Parkhill, Ont.

In judging this contest, and awarding the prize to Emerson & Fisher, St. John, N.B., the judges have not necessarily considered mere size, although the winning advertisement is a full page one. The winning ad. was chosen because it appealed to the judges as embodying the greater number of business bringing, selling points. There are others pretty nearly as good. Among these are the full page ad. of A. W. Humphries & Son, Parkhill, Ont.; the half-page ad. of DeWitt Bros., Napinka, Man., (written by G. H. Herity); the full-page ad. of Ingram & Davey, St. Thomas, Ont.; the double column ad. of Bridge Bros., Thessalon, Ont.; the 13-inch three column ad. of C. C. Falconer & Co., North Winnipeg; the 13-inch three column ad. of the Marks, Clavet & Dobie Co., Port Arthur, and several small ads., written by James H. Blue, with the J. H. Ashdown Hardware Co., Calgary. Still other good ads. judged were from: J. & T. M. Piper, Fort William; Westman's Hardware, London; R. F. Johnston & Co., Acton, Ont.; Hunt & McLeese, Abernethy, Sask.; Carter Bros., Picton, Ont.; A. M. Bell & Co., Halifax; Adamson & Sproul, Orangeville, Ont.; Geo. W. Ecclestone, Bracebridge, Ont.. and the Hockin-Siddons Hardware Company, Moose Jaw, Sask.

In a class apart we have placed two three-column hardware ads. of Stanley, Mills & Co., Limited, Hamilton. These ads. are about as good as hardware ads. can be, but the judges had in mind when judging the idea that Christmas features should be considered. These Stanley Mills ads. are models well worth studying by the trade as models of the kind of retail advertising that can hardly fail to bring business, but have no special features as Christmas ads. In this point they differ from almost every other ad. entered in the contest, and were accordingly not classed in the contest. These, with others, will be reproduced in future issues of Hardware and Metal.

The Prize Winning Ad.

Now, for a consideration of the points of the prize winner. The first point to be noted is its simplicity. Instead of a lengthy editorial at the head, the writer of the ad. has constructed a head-line which says a whole lot in a very few words, and the shortness of which permits of it being set in eye-compelling display type. "Here are just the things for Christmas," is a headline which simply cannot fail to attract the attention of any reader who is at all concerned in the buying of Christmas gifts.

This brief-and-to-the-point headline is supplemented by a paragraph of a similar nature which gives information in terse, quickly understandable terms.

Then, attractively laid out, (though the arrangement might have been a trifle more harmonious) comes a number of suggestions for Christmas presents set

out, described and illustrated in an attractive style. Each item has a crisp sentence or two descriptive of the merits of each article as a Christmas gift, headed with the name of the article in heavy type, illustrated with good cuts of the articles themselves, and with prices plainly stated.

All through the ad. this plan of crisp word-and-picture illustration, accompanied by price, is consistently carried out, producing an ad. which is at once harmonious and convincing, and that without the least waste of words, and altogether free from the grandiose talk which quite frequently detracts from an otherwise good ad.

For the rest, the ad. might be improved by a different arrangement of the cuts; but that is a detail which by no means detracts from the general efficiency of the ad., particularly as it occupies full page space.

Humphries Good Ad.

The full page ad. of A. W. Humphries & Son is a good example of the jolly kind of advertising. We think that a straight "value talk" would be more effective in actually disposing of goods than the Santa Claus talk, although that is a mater of opinion. The set up of this ad. could hardly be improved upon, the best possible disposal having been made of the reading matter and cuts, while the border and Santa Claus cuts give the ad. a holiday tone. The weak point in this ad. is, we consider, the fact that more of the space wasn't used for described and priced suggestions. A few more articles might have ben set out with the points outlined, such as, "Pocket Knives—Four-Bladed, Bone Handled Pocket Knives, Sharp as a Razor, that will delight the heart of your boy. Christmas price 60 cts.," and so on. It often happens that actual priced suggestions will bring in a customer which all the "editorial" talk imaginable couldn't draw out.

Commendable Manitoba Ad.

The half-page ad. of DeWitt Bros., Napinka, Man., is also an excellent specimen. Not an inch of the space has been wasted; and the only improvement we can suggest in the set up is that the prices would have had more emphasis if set in heavier faced type. The heading and opening paragraph are fine, and of the straightforward variety which builds up the reputation of a house. The ad. is so well written that the lack of cuts is hardly noticed. Each paragraph is a good one—some being particularly fine—the paragraph about "Keen Kutter" tools, for instance. Here is good argument and suggestion followed by a discount inducement which can hardly fail to appeal to fathers of mechanically inclined boys.

A sense of hurry will do more to befuddle the human faculties than any other feeling. Work quick, but don't bother about the train. Sell goods as long as there are any goods to be sold. Take the train afterward.

BOOMING GAS STOVES.

The opening of a number of gas wells in the vicinity of the St. Lawrence valley has opened up a demand for gas stoves in that district of Canada of considerable magnitude.

The borings for natural gas in the district of Quebec Province have proved its presence in many sections. Enough wells have been opened to supply a number of towns for lighting, heating and manufacturing purposes. In Three Rivers, a cotton factory now building, to employ several thousand operatives, will be supplied with power, heat and light by local gas wells; many other factories are already so supplied; and churches and homes are thus heated and lighted. There is great probability of the extension of this system to Montreal if the supply shall prove as abundant as anticipated, the American concessionaries believe that the St. Maurice valley will develop the largest gas fields in Canada, comparable in magnitude to the biggest fields in the United States. Gas for manufacturing purposes costs at Three Rivers 20 cents a thousand feet. Allowing for the cost of piping from the source at St. Barnabe to Montreal, it would be possible to undersell gas and electricity for light and power. American gas stove manufacturers have opened branches there for the sale of their goods with much success. One concern reports sales to the amount of $2,000.

Continual urging is the price of success to the salesman.

Prize Winning Ad. sent by Emerson & Fisher, St. John, N.B. As originally set it had a neat border, but this is not reproduced.

Industry — persistent industry — will win where mere brilliancy will prove an utter failure.

Finding good business is in reality finding good friends who will do business your way and profit thereby.

Matters of Mutual Interest

Advertising Rates to Advance—Improvements in Mechanical and other Departments—Employes work Shorter Hours—Wide Circulation of Hardware and Metal—Value of the Want Ad. Columns

Owing to the steadily increasing cost of production it has been found necessary to announce an advance of about 25 per cent. in the advertising rates in Hardware and Metal, commencing in March. For a year or more past the necessity of this action has been pressing itself upon the publishers, but a reluctance to disturb present relations with many advertisers has delayed the decisive action until this spring.

* * *

A few months ago many enlargements were made necessary in the mechanical department, both in the form of new machinery and in an increase in the staff of workmen, the change being largely due to the agreement entered into between the employing printers and the journeymen, the new arrangement providing for a shortening of the workday from nine to eight hours, as well as allowing an increase in wages on a sliding scale basis, covering a period of several years. This, taken in conjunction with the steady advance in the price of printing paper, machinery, type, ink, etc., has made a heavy increase in the cost of production. Wages of printers, for instance, have increased from $11 a few years ago to from $15 upwards at present, while with the shorter workday not only is a larger mechanical staff necessary, but special men must be employed to keep the machinery in full operation.

While referring to the mechanical department it might be said that the MacLean Publishing Company have adopted a new system in force in no other office in Canada, and in but few in America. Every year one-third of the type, borders, etc., is thrown out and the most modern type faces take their place. Every three years, therefore, a complete new outfit is in use. This has made necessary the recent cancellation of the type book in use by many advertisers in this paper.

* * *

Still another factor has been the extensions made in the editorial department. The wide circulation of Hardware and Metal, covering fully 98 per cent of the hardware merchants in every corner of the Dominion, has made necessary a larger staff of writers and correspondents. Several specialists have been added to the staff during the past year and a marked development has been made in the correspondence pages, every province now being represented by staff writers. It is the intention to continue adding specialists on various subjects from time to time, making the paper invaluable for reference in every department of our subscribers' activity. Retailers can assist us at times by mentioning the paper in their letters to both new and old advertisers, although we realize that this little courtesy is easier overlooked than remembered.

* * *

The following letter from Fritz Dakin, with Dakin Bros., Digby, N.S., illustrates how much one subscriber thinks of the paper, and suggests a plan for fyling articles for reference which may be helpful to other readers. Possibly, however, someone can suggest a better method. Let us hear how others fyle the papers, save articles for future reference, or arrange to have their clerks see the paper for articles on salesmanship, window display, etc., or their tinsmith for articles on his branch of the trade. Mr. Dakin writes :

"I have been working a little scheme with copies of Hardware and Metal, and thought that some other subscribers might care to do the same if they are not already doing so. I take all the pages out of six Hardware and Metal copies and leave a half-inch margin on each leaf. Then I take out of all the copies I have the pages containing things that interest me and paste them in the six with leaves out. Each one of the six is for a different subject, as follows: "Advertising," "Business," (including articles on business management and miscellaneous subjects); "Patterns for the Tinshop," "Paints," (including Mr. Heckel's catechism); "Window Displays" and "Heating." I have found the above very useful for reference."

* * *

Now that Hardware and Metal so thoroughly circulates amongst hardware merchants throughout Canada an effort is being made to extend the circulation amongst the general storekeepers in the small villages, who carry stocks of hardware. Very gratifying results are being secured, and as more intelligent merchandising can be expected from men who read a trade paper, the trade as a whole will benefit from this wider circulation.

Beyond Canada's lines Hardware and Metal is also widely recognized as the authority to look to for information regarding the hardware trade in Canada, and letters have recently been received from such widely separated writers as Heinrich Lanz, Mannheim, Germany ; B. M. Goenka, Calcutta, India ; Spurdle & Bond, Wanganin, New Zealand ; Ozawa Shokwai, Kobe, Japan ; W. D. Lent, St. Georges, Bermuda; and Hugh Wilson, Christchurch, New Zealand. Another letter from F. Hewitt, North Stockport, England, is worth reproducing in its entirety. It reads :

"The editor of 'The Colonizer,' London, has advised me to write to you for information respecting a saw for hand power, used, I believe, largely in U.S. A. and Canada for felling trees in place of the old hand-saw or axe.

"I am under the impression I saw an advertisement when in Toronto a few years ago about this tool, and am anxious to find out where it is to be obtained. If you can give me some information on the subject, I shall be very thankful. I intend to purchase several if found serviceable, for use in West Africa. The tool in question is supposed to save quite considerable labor and would be a boon to many in Africa.

"Hoping you will be able to help me and thanking you in anticipation, I beg to remain."

* * *

The recent visit to Canada, of J. Meredith McKim, the MacLean Publishing Company's representative at London, Eng., also illustrates the international character of the MacLean Trade Newspapers, this company being the only Canadian publishing house to maintain English and foreign offices, with the single exception of the Toronto Globe. For eleven years Mr. McKim has been in charge of the London office, where now a staff of four represents the MacLean papers. Mr. McKim joined the MacLean staff as a boy and has now one of the company's most important assignments. His father and uncle were both members of the 13th Hussars in the Crimean war, and detailed to membership in the famous "Light Brigade," his father being assigned to the personal staff of Lord Raglan.

* * *

Iveson L. Cooke, Fenelon Falls, Ont., sends the following as a testimony of the worth of the "want" columns of this paper :

"Once again your paper has been of service to me. Two weeks ago I put an ad. in the "Goods for Sale" column and have realized the best results obtainable."

Mr. Cooke also sends an inquiry, which is answered in our "Letter Box" department.

* * *

Active preparations are being made for the Special Spring Number of Hardware and Metal, which is dated to appear this year on March 28. As usual, this year's number is expected to outclass previous issues, although, judging from the kind words written of last year's number, this will be hard to realize.

MONTREAL JOBBER DEAD.

L. H. Hebert, president of L. H. Hebert & Co., wholesale hardware merchants, Montreal, and a prominent French-Canadian, is dead at the age of 72. Deceased was born at St. Marc, Richelieu county, and came to Montreal in 1867. Entering the service of Prevost & Co., he was eventually admitted as partner, the firm assuming the name of Prevost, Hebert & Prevost. Fully 20 years ago the firm was dissolved, and Mr. Hebert became head of the firm of L. H. Hebert & Co., which was this year formed into a joint stock company, of which Mr. Hebert was president.

HARDWARE TRADE GOSSIP

Ontario.

The Junction Hardware Co. has succeeded C. M. Cutts & Co. at Toronto Junction.

Geo. Bohlander, Elmwood, Ont., recently sold his hardware business to Rudolph & Son.

Chalmers Bros., Palmerston, have adopted the cash system in connection with their hardware business.

F. W. Barrett, secretary of the Luxfer Prism & Expanded Metal Co., Toronto, died on Sunday, Jan. 26, at Montreal, of pneumonia.

Cyrus A. Birge, president of the Canada Screw Co., Hamilton, has been elected to the presidency of the Sovereign Fire Insurance Co.

M. J. McLaughlin, representing the U. S. Steel Products Import Co., Montreal, is calling on the trade of Western Ontario during the next few weeks.

The Standard Chain Co. of Canada has commenced operations at Sarnia, Ont., where they have erected an extensive plant. Alex. Gibb, of Montreal, is the sales agent.

It is impossible to estimate the loss but it is supposed to be covered by insurance. All the expensive machinery was uninjured. Preparations are being made to rebuild at once.

The rivalry existing between the hockey teams representing the Toronto hardware jobbers is again in evidence. On Wednesday night a team representing the Aikenhead Hardware Co. defeated Rice Lewis & Sons septette in a closely contested game. The score at the finish stood 3 to 2 in favor of the former team.

James D. Smith, hardware merchant, Baysville, Ont., was re-elected this year at the head of the poll to the council of that village. "I am insisting upon matters being run in a business way and am strong enough to carry my points," writes Mr. Smith, and the vote given him shows that his efforts are appreciated.

J. T. Smith, secretary-treasurer of Lewis Bros., Limited, Montreal, spent several days in Toronto last week calling on the trade. He also visited St. Thomas before returning east. This was Mr. Smith's first visit to Toronto and in addition to making the acquaintance of the firm's customers he made many strong friends.

A winding up order was applied for last week by creditors of the Toronto and Belleville Rolling Mills Limited, Belleville, to wind up the said company. The assets are approximately $125,000, with outstanding debts and bonds. James Hardy, of the firm of Jenkins & Hardy, chartered accountants, Toronto, was appointed provisional liquidator.

Canada Tin Plate and Sheet Steel Company's works at Morrisburg, the only tin plate and sheet steel industry in Canada, which commenced operations on December 2, received a severe blow on Monday. Fire broke out in what is known as the pickling room and destroyed about one-half of the big 800-foot building, including the pickling room, tinning room, galvanizing room, and sorting and shipping room, together with the general offices, in the latter of which were stored all their valuable papers, plans, patterns, etc.

The fire originated through the ignition of oil in one of the tinning vats.

Quebec.

F. P. Jones, of the Dominion Iron and Steel Company has been visiting Montreal.

Thomas Cantlie, of the Nova Scotia Steel and Coal Company, paid a visit to Montreal.

George E. Post, president of the Standard Coupler Co., New York, has been in Montreal, attending the dinner of the Canadian Railway Club.

In the Montreal manufacturers' hockey league, Northern Electric defeated the Montreal Packing Co. by 6 goals to 4; Canadian Rubber beat C.P.R. by 6 goals to 4, and the Steel works defeated the Rolling Mills by 4 to 1.

The Starke-Seybold hockey executive point out that the match between their team and Frothingham & Workmen was incorrectly reported last week. The game instead of ending in a win for the latter club, resulted in a draw of 2 goals each.

An exciting game of hockey was played at the Stadium, Montreal, between Starke-Seybold Co.'s team and Lewis Bros. The game had a tendency towards roughness, but owing to the efficient work of the referee, L. Watson, it was held under. Lewis's men were heavier, but they could not stand the pace of their opponents and the match ended in favor of Starke-Seybold by 5 to 1.

The annual hockey game between the members of the staff of A. C. Leslie & Co., Montreal, was played at the "Coliseum." After a heated struggle the bachelors proved their superiority over the benedicts by the score of 4 to 0. For the bachelors Macnish and McCuaig made some wonderful rushes through the heavy defence of their opponents, while for the benedicts, Foster and Copeland deserve credit for their aggressiveness in an uphill fight. After the match the party were the guests of the president at King's Hall, where an elaborate spread had been provided. Speeches and toasts were indulged in.

George Caverhill, the retiring president of the Montreal Board of Trade, in delivering the annual address to the members, referred to the excellent banking system of the country as exemplified in the way the recent financial depression was met. Going on to speak of the proposed bureau of transportation, Mr. Caverhill said the council had undertaken to establish such an organization. The estimated cost would be about $5,000 per annum, and to meet this a fee of $25 per annum would be charged to members. After alluding to the improvements in the ship channel and in the harbor, the retiring president referred to the question of the damming of the river St. Lawrence at the Long Sault Rapids The matter was now before the International Provinucial Waterways Commission and he claimed that the scheme should be opposed not only by every Canadian, but by every admirer of the beautiful on the continent of America.

The H. R. Rickey Co., plumbers Montreal have been granted a winding-up order. A meeting of creditors will be held on Jan. 27.

Western Canada.

A hockey team representing the staff of the W. P. Miller Hardware Co., Calgary, recently defeated the Hudson Bay Co.'s team by the score of 7—0.

ANOTHER SATISFIED MEMBER.

"I sent out nineteen collection form letters to delinquents and seven of them have paid their accounts in full. Four paid in response to the first letter, and three to the second. I collected $38.83 in all, and am well pleased with the results," writes C. B. Miner, hardware merchant, Cobden, Ont., to the Secretary of the Ontario Association.

BIG FIRE IN MONTREAL.

Fire broke out in the establishment of P. D. Dods & Co., paint and oil manufacturers, McGill street, Thursday morning, caused by the explosion of some chemicals, and in spite of the efforts of the firemen the fire spread to the adjoining buildings, occupied by E. F. Walters & Co., hardware, and Frost & Woods, agricultural machinery, and caused heavy damage in both these buildings. Three times the firemen succeeded in getting the flames practically extinguished, when explosions of chemical caused fresh outbreaks.

The loss is estimated at about $100,000. The P. D. Dods establishment is totally destroyed. Their loss will amount to about $60,000. E. F. Walters $30,000, and Frost & Wood $10,000.

Insurance will amount to about $80,000.

Major Hartley, mining engineer, of London, England, is examining iron properties in the townships of McTavish and McGregor, near Port Arthur, for an English syndicate, which is considering their purchase from New York and local people, with a view to their development. The properties are several thousand acres in extent and said to show indications of large deposits of iron.

The South Wales steel bar trade is being seriously cut into by American and German competition. In fact, the business has practically ceased, because the Midland dealers are being underbid from America.

SITUATION VACANT.

WANTED—An up-to-date hardware man who has a thorough knowledge of tinsmithing and furnace work; one who can work and manage either department when required, must be a hustler and not afraid of work. Apply at once giving reference and stating salary required. D. Hall Sutherland, Conora, Sask. (10)

THAT CO-OPERATIVE ACT.

Inquiry shows that few members of Parliament know anything about the proposed legislation making it possible for co-operative companies to be organized on terms grossly unfair to the ordinary limited stock business companies with which the co-operative enterprises will come into competition.

"Why, your article in Hardware and Metal a fortnight ago was news to me," said one M.P. this week.

If the legislators know so little about the proposed legislation the very least the Government can do is to allow the legislation to be held over for another year so that retailers and others can fully discuss the proposition before it becomes law.

Get busy then, hardwaremen, and write or see your local M.P., urging that he see Postmaster-General Lemieux, urging that if the measure is not thrown out entirely that it at least be held over for a year and another committee appointed to hear all arguments from people opposed as well as favorable to the co-operative law. Last year's committee heard only one side—that of interested parties in favor of the bill. And send a similar letter to Hon. Mr. Lemieux himself so that your views will be on record even though your M.P. neglects his duty to you in the matter.

ATTEND THE CONVENTION.

Hardware merchants in Ontario will make no mistake in deciding to spend a few days in Toronto the second week in February, attending the Retail Hardware Association convention, calling on jobbers and manufacturers, or taking in some of the other attractions billed for that week. It is not often that single fare rates prevail on the railways for a week in an off business season and outside of the regular holidays which draw such large crowds that traveling is uncomfortable.

The Ontario Retail Hardware Association is gradually gaining in the confidence of the trade, and while it has lacked the support of many of the well-known firms in the large towns and cities, these are gradually enrolling and in the course of another year the organization should be thoroughly representative of the trade. A move in this direction is to be made at the coming convention, when it is hoped to secure an executive composed of merchants from the larger towns.

An organization that fights for the rights of the retailers is bound to win respect, and an organization that does things for its members, helps to collect bad accounts, to lower insurance rates, defeat unfavorable legislation or secure the passage of helpful laws, is certain to win support. These things the Ontario Retail Hardware Association are doing in addition to handling trade matters deserving its attention and it is now safe to say that the organization is a fixture and will steadily grow in membership and influence as the years roll by.

WILL BE A GOOD YEAR.

The recent inventory proceedings of many of the wholesale houses made evident the gratifying, as well as highly important fact, that despite the break in trade in November and December, sales for the whole year were little, if at all, behind those of 1906. The alarmists who paid undue importance to the effect on trade of these two bad months, and conjured up all manner of gloomy predictions as to what the results would be, not only for the coming year, but for the twelve months nearing completion, should take to heart the lesson taught by the full harvest of 1907. Frightened by the shadow of November and December, they forgot to take into consideration the blaze of sunshine under which the other months worked, and from under this shadow likewise they made no allowance for a similar state of things happening in 1908. Surely there is every right to assume that if ten months of 1907 can thus carry so comfortably the concluding two months of that year, the latter months of 1908 should be just as able to carry the load, say of January and February, and probably March, as well.

One swallow does not make a summer, neither does one, two, nor three lean months necessarily make a lean year. It does not show a very strong belief in the recuperative powers of the country, or a strong confidence in the inherent stability of our resources, to feel alarmed as to the future, because trade does not open out under a strong fanfare of prosperity. The pessimist should be encouraged by the moral of 1907. The result of one year, can be made the result of the next.

There is another reason why there should be good prospects before the country, and one that does not hinge upon comparison. There is the falling off in the demand of November and December to be made up. Trade was not depressed in this period, because the needs of the country were lessened by a weakening in the consumptive desire, but by the lack of power for the time being to satisfy the desire to the extent hitherto within reach. But the country will not go on short-commons for long. Money is circulating more freely every day, and the consumptive deprivation suffered at the end of last year will assuredly be made up for when conditions allow. Therefore to the natural demand which can be expected from the country during the year, we may add the balance of November and December, presuming there is no great trade cataclysm to contend with, and the most ultra-pessimist does not anticipate such a catastrophe.

Why should there be doubts as to the future! If 1907 can stand two lean months, 1908 can likewise stand a similar period. It is better to start badly and end well, than to start well and end badly. The country is now on a more solid basis. The air is cleared and wild cat speculations have been repressed. The belief is expressed by financial authorities that money will flow into the country in a greater steam than ever, and capital is the one great thing that Canada needs. After the storm the calm, after the panic the awakening to the fact that things are not so ill as they at one time seemed to be. Under the encouragement of this awakening there is no reason why this year should not be made a truly banner one.

THE SITUATION IN THE WEST

By our Special Winnipeg Correspondent.

With all the employes of the C. P. R. car shops laid off for another week and considerable curtailment of employes in other large industries, more or less directly connected with railway transport —the fact is forced home that conditions in the West have materially changed since this time last year, when freight cars were hardly to be obtained for love or money. In January, 1907, if any railway in the Canadian West got hold of a few foreign cars they hung on to them for dear life, and only sent them home when absolutely obliged to do so. In January, 1908, foreign cars are being rushed home to their respective roads as if a pestilence possessed them. The Canadian Northern Railway is supposed to have 2,000 empties standing idle at the present time, and it is quite probable the Canadian Pacific has double that number of empties; 1,500 are credited to Fort William alone, and every gravel pit siding between the lakes and Winnipeg has its contingent, and Winnipeg yards also have a number. There are several factors in bringing about this condition of affairs, chief among them being the short crop in the West, even the large amount of wheat being shipped all rail to St. John, not sufficing to make up the difference between this year and last in this one line alone. Another factor is the exceptionally large amount of coal hauled during the summer months in anticipation of a possible repetition of last year's shortage of fuel. Again the financial stringency has curtailed the movement of merchandise to a very considerable degree, merchants cutting things as fine as possible, and, lastly, there is the tendency to hold back freight as long as possible in the hope of a more satisfactory freight tariff after the commission has taken evidence in Ottawa next week. The Winnipeg Board of Trade is sending a very strong delegation, and it is understood an energetic fight will be put up against the proposed tariff, more especially those sections which have heretofore been known as commodity goods to the Kootenay and other Western points. Railway men state that there is not much likelihood of improvement in the movement of cars before next spring, but that when spring opens they anticipate a very busy season. In the meantime the laying off of large bodies of men even for a week has its appreciable effect in retail trade, which is rather quieter even than usual this January.

Wholesale houses continue to report conditions fairly satisfactory. In the matter of collections, some of this is no doubt due to the more emphatic effort that has been made to get money in.

The wheat situation has shown little change, beyond a slackening of demand for cash wheat of the higher grades, due, no doubt, to unexpectedly large shipments from Australia to Great Britain and the larger movement of the Argentine crop which is now coming forward very freely. Receipts of cars at Winnipeg have been well sustained, but in spite of fine weather receipts at country elevators have decreased during the week.

The most important matter in grain circles during the week has been the hearing before the Agricultural Committee of the arguments pro and con on the proposed amendments to the charter of the Winnipeg Grain and Produce Exchange. The case is rested now, and it is not known whether or not the bill will be returned to the House for final reading in its present form. If it should pass, it will go on record as absolutely the most vicious piece of legislation in its interference with private rights and private property that has been placed on any statute book in Canada in the last twenty years. H.

THE METAL SITUATION.

A slight sign of uneasiness is observable in the metal markets. After two weeks' steady progress towards the haven of stability, danger signs from the direction of tin and copper again make their appearance, giving emphasis to the folly of "hallooing before one is really out of the wood." Under different conditions the metal markets would not feel this uneasiness so promptly, for, after all, the break is not immediately ominous by any means. But a hurricane has only just been weathered, and the ship is not in a fighting trim to meet further buffeting with assurance. Nervousness has not yet given place to absolute confidence in the firmness of the general recovery. Under a continuance of the improvement that has lately taken place in the markets, a reaction later on in any particular direction would not cause so much apprehension as at the present moment.

Tin is proving the least reliable of the metals, and it is the weakness of its present position in the English markets that is proving the great disturbing element at the time of writing. The metal has slumped £2 10s. during this week, and the knowledge that the sword of Damocles hangs over its head in the heavy holdings of a speculative syndicate, induces a feeling of nervousness when the conditions are considered. It may be that the break this week is not due to any heavy unloading of stocks—the next two or three days will tell—but merely a fluctuation due to lack of stability and firmness in demand, under which all the markets at the present moment are suffering. Some comfort may be gleaned from the fact that the market closed steady, but all the same there is the feeling that the metal may slump again at any moment. If English prices did not govern the general markets of tin, a reaction would be less dangerous, but, unfortunately, the cue is taken from across the Atlantic.

Copper, likewise, in the Old Country has declined. Here again it cannot be said that we have been taken by surprise. There has been a great amount of importing done on that side, in fact, this steady demand helped prices in New York to regain their present level. We have expressed our doubts as to the bulk of the metal being consumed, or whether it was being held for speculative purposes. The present decline in the Old Country of £1 12s. 6d. may be due to some unloading of these stocks. If so, then New York will feel the effect. Happily, the ruling price of copper is governed from this side of the Atlantic, and break in the English market, presuming it is not too extensive, is not so serious as it is in the case of tin. It is unfortunate that these signs of weakness should appear just at present, especially in view of the fact that full vigor has not yet come to the markets generally. The other metals are showing a satisfactory firmness. Lead and spelter are holding out good promise, and unless they are overwhelmed by retrogression in the primary metals, should gather firmness from now onwards. Iron maintains its strength, proving itself the most reliable horse in the team.

EFFICIENT SERVICE WANTED.

The Kinistino Echo supports the view taken by Hardware and Metal and says that as long as "postal positions are the plums in the gift of political aspirants a thoroughly efficient service cannot be expected. If a system of civil service were adopted with a more liberal salary rate a great benefit would be conferred upon the country in the way of improved postal conditions."

Markets and Correspondence

(For detailed prices see Current Market Quotations, page 66.)

MARKETS IN BRIEF.

Montreal.

Copper—Unchanged at 15c.
Ingot Tin—Still at 32c.
Lead—No change.
Turpentine—Up 5c. a gal.
Ground White Lead—Further cut of 25c.

MONTREAL HARDWARE MARKETS

Montreal, Jan. 31.—Trade is much about the same as it was last week. Orders for spring delivery are improving slowly, but the full rush will not be felt by the jobbers until the end of February and during March. Prospects are bright for a good spring trade. The demand from the Northwest may not equal that of last year, but the East shows signs of keeping well up to the average.

Collections are fair, and there is evidence all the way round that money is commencing to move more freely. The Northwest was the greatest offender as regards collections last year, but jobbers anticipate that it will retrieve its reputation when trade opens out. There is evidence that there will be no lack of capital for farming operations.

Builders' Hardware and Supplies—There is little change in the new list of prices issued by the American manufacturers. Figures have been balanced, and one or two lines are slightly lower, but, on the whole, little alteration has been made. Lock sets are beginning to move better, and some fair orders have been received from the West, where building operations show signs of good promise.

Nails—Prices are being maintained here at $2.35 base per keg. Dealers are now booking ahead for spring delivery, and the demand shows signs of improving.

Lawn Goods—Orders are commencing to come in for lawn mowers, garden tools, wheelbarrows and rubber hose, but the rush of the trade is not expected until the end of February. Prices are unchanged.

Bolts and Nuts—These lines are moving more freely, although railway orders are somewhat lighter than usual. Stocks on hand are well assorted, and prices remain firm.

Sporting Goods—Articles in this department have not commenced to sell freely as yet, excepting ammunition. Jobbers will probably have a better assortment this year than last, in the latter article, and there is little danger, so far as can be seen, of a shortage similar to that experienced in 1907.

Lumbermen's Supplies—Axes are beginning to sell in better quantities as well as boot calks. The demand still shows a falling off, compared with last year, and the prospects, although they point to a good call, suffer in comparison.

Screws—Stocks of screws are now better assorted, but some of the sizes still appear to be short. It would be well, therefore, for dealers to place their orders early to avoid the danger of being held up again. Prices are unchanged.

Shot—Sorting-up orders continue to be the main feature of the trade. Orders for spring delivery are at present few and far between, but the next week or so should show a decided improvement in this direction.

Railroad Supplies — The demand shows a slight falling off, and it looks as if the immediate wants of the trade were, for the time being, supplied. The effect of the severe weather will be felt in the delay to the construction work now going on. A heavy demand is anticipated in the future, as operations are to be carried out on an extensive scale when the winter gives out. Rail track bolts, crowbars, and powder are still moving well.

TORONTO HARDWARE MARKETS.

Toronto, Jan. 30.—A comparison between the trade done during the month with that of the same period for the past five years shows that with the exception of 1907 this year's business has averaged up fairly high. At present considerable booking is being done for spring delivery and a good sorting business exists at present for winter goods. The cold snap of the past few days has helped to stimulate the sale of winter goods and an increased demand for the various lines has been the result. Collections are improving and reports coming from the western provinces show that if the prospects of next year's crop are bright during the next three months business will boom again this year. Building operations are still at a standstill, but with the advent of the spring a large demand for the lines used in building is sure to result.

Some American manufacturers of builders' hardware have revised prices, the readjustment being especially on goods into which copper and brass enter largely, particularly bronze butts, knobs and other door trimmings. These prices have been reduced about 10 per cent., but few, if any, changes have been made on heavy iron and steel goods. Sargent & Co., among other manufacturers, are about to issue a new general price list.

Nails—The price is being firmly maintained in Toronto regardless of the reports of cutting which come from the east. Stocks are fairly plentiful and a steady demand exists at present. We still quote at $2.45 per keg.

Builders' Hardware and Supplies—The demand is again becoming seasonable for these goods, and prices remain unchanged. The new lists have made no change in this respect, last year's prices being firmly maintained by the manufacturers. A normal demand for these goods has been noted all winter, as the result of the broken weather, and booking is considered larger at present than was the case in 1907.

Lawn Mowers—A normal demand exists and business will pick up as the season advances. There has been no change in prices since the new lists were issued.

Shot—The price of shot remains firm with but little demand. Some booking for future delivery is being done. We still quote 20 per cent. off list.

Copper and Brass Goods—There is a steady demand for this class of goods at present and prices, contrary to expectations, are being firmly maintained. Booking for futures is well under way.

Bolts and Nuts—Business is steady and booking for spring delivery is coming in more freely. There has been no change in prices during the week.

Screws—The demand is still slow, but indications point to a speedy revival of trade. Considerable booking for future delivery is being received at present. Quotations remain 85 and 10 per cent. on flat, and 80 and 10 per cent. on round heads.

Solder—Solder remains at 20c for half-and-half.

Sporting Goods—The recent cold snap has proved a boon to dealers having a stock of sporting goods at hand at present. Stocks are not well cleared out this year owing to the open winter. There is a fair demand for ammunition at present.

Building Paper—The demand is on the increase, booking now being received in fairly large orders. The revised price list appears under current market quotations.

MONTREAL METAL MARKETS.

Montreal, Jan. 31.—Prices maintain their steadiness this week and the policy of the merchants generally in endeavoring to establish a firm basis to the markets is bearing good fruit. Ingot tin has rather disappointed hopes this week by experiencing a setback in the Old Country, but the local price has not at present been affected, and for this we may thank the prudent course adopted in the regulation of quotations when the markets commenced to revive. Copper likewise is lower in the Old Country, but this was to some extent anticipated, owing to the large amount of importing that has been going on there. The New York price remains steady, and so long as it does, prices should not alter this side.

Altogether the market does not close so favorably as it did last week, although we do not anticipate any great setback. The fact that prices remain firm in the circumstances shows the benefit of inducing stability to the markets.

Copper—This metal retains its strength in New York, but in the English market it is now quoted at £62, which is a drop of 12 shillings and sixpence over last week. Doubts have been expressed all along as to the strength of the recovery in the English market, owing to the large amount of copper that has

been bought recently. It may be that all this metal was consumed, and that the present cut is merely a fluctuation to which all markets are liable, especially when they have not regained full strength. If, however, copper has been held for speculative purposes, and there is any unloading going on, then the market will suffer an unfortunate relapse, and New York will be affected likewise. At present there is no change locally at 15c. with a quiet demand. There may be a shading in price, however, for second hand lots for immediate delivery.

Ingot Tin—This metal has again proved the disturbing element of the week. It has eased off £2 10s. in the English market since our last quotation. It is not yet certain whether the threatened unloading of the eastern syndicate has brought about this decline. If they intend to throw their metal on the market, tin will experience a heavy hammering in the next few days.

The fact that the market closed firm, however, gives hopes that there isn't any great process of unloading going on. Locally there is a fair business doing and prices for the present remain at 32c.

Pig Iron—The tone of the market generally is quiet. Stocks in England are showing a slight increase, which tends to keep prices down. The lowering of the interest rate is however expected to result in a resumption in operations on the part of the pig iron consumers, which should have the effect of strengthening the market. There has been a further shading in prices, and we now quote Cleveland warrants 47s. 7d. The United States market continues in a somewhat unsettled state. Southern furnaces are cutting prices, which has resulted in the turnover of a considerable tonnage since the first of the year. Northern and eastern furnaces are however maintaining a strong position by curtailing output. The general tendency is more favorable and owing to the improving financial conditions it is not thought that any further material reduction will be made in the price of raw material. Locally the position is quiet, but inquiries are now being made for a fairly heavy tonnage for delivery during the next two or three months and also after the opening of St. Lawrence navigation, prices being governed principally by the condition of the English market. Small lots ex-store for immediate delivery continue to command good prices. We quote Middlesboro No. 1, $21.50, ex-store with a shading for large quantities for import; No. 3, $20.50; Summerlee, $25.50.

Lead—Lead is steady in the English market at last week's quotation of £14 12s. 6d. The demand here is good and it looks as if lead would turn out to be one of the most staple of the markets. We still quote 4½c.

Antimony—There is nothing of moment to note in this market. Prices are stronger in the foreign markets but there is not enough firmness to them to increase quotations here.

Spelter—Spelter is gradually improving its position, and the outlook is brighter than it has been for many months past. The metal has been selling at less than actual cost of production and prices will advance rapidly when the turn comes. Lessened production is still the order of the day. Spelter continues to be quoted at $4.50 to $4.55 East St. Louis, while in the English market the price is up 5s. quotations being now £27 17s. 6d. Locally there is still no change.

LONDON, ENG., METAL MARKETS.

London, Jan, 28.—Cleveland warrants are quoted at 47s 6d, making prices as compared with last week 4½d lower.

Spot tin opened steady at £122 17s 6d, futures at £123 12s 6d, and after sales of 180 tons of spot and 700 tons of futures, closed steady at £123 for spot and £123 12s 6d for futures, making prices as compared with last week £1 15s lower on spot and £1 17s 6d lower on futures.

Spot copper opened firm at £61 15s, futures at £62 10s, and after sales of 300 tons of spot and 500 tons of futures, closed firm at £62 for spot and £62 12s 6d for futures, making price as compared with last week 15s lower on spot and 12s 6d lower on futures.

Lead—The market closed at £14 12s 6d, making price as compared with last week 2s 6d higher.

Spelter—The market closed at £20 15s making price as compared with last week 5s lower.

TORONTO METAL MARKETS.

Toronto, Jan. 31.—Foreign speculation in tin and copper has made wide changes in outside quotations during the week, the net result being a marked decline in each case. This has had an unsettling effect on the local market, but jobbers are maintaining prices in an effort to keep the market in hand.

Copper exports to Europe continue to be very large, with consumption in both America and Europe very light. This means that the metal exported is being warehoused and becomes a determining factor to be calculated upon in future movements of the market. Should an advance occur in America this metal in European warehouses may be unloaded or should prices fail to advance and the warehouses become overstocked, the outlet for America's over-supply will be cut off and prices must drop or production greatly curtailed. Looked at from this standpoint the outlook for copper is by no means encouraging. Locally, we quote 15c, but this is shaded for buying in quantities.

Tin, likewise, is weaker, with from 27c to 28c quoted in New York. Prices declined sharply in London during the week firming up on spot a little on Tuesday. Consumptive buying is confined to small lots and with a constant fear that the Straits Syndicate may unload its hoarded stocks there is a marked feeling of uneasiness. Jobbers report local buying fair at 31c.

Pig Iron—Contrary to other metals, pig iron holds steady, with quotations unchanged at $22.50 for Canadian foundry iron and $21 for No. 3 English. Prices in England are a shade lower than a week ago and American iron is coming into competition with English for export to Mediterranean ports. Stocks of British pig iron in the Middlesboro district are increasing, after a long period of decrease and prices recently dropped to 47s 6d for No. 3 Middlesboro. The London Iron Trade Review states that ever since the early part of March, 1906, the stock of Cleveland pig iron in Connal's public stores has been rapidly declining—there was scarcely a single day between March 5, 1906, and the end of November last when an increase had to be recorded, but now the situation has changed, and almost every day an increase has to be shown, and this notwithstanding the large reduction in the production of pig iron in the district. The lowest point which Connal's stock of Cleveland pig iron touched since the middle of 1904 was 85,708 tons on December 21 last; at the close of the year the quantity held had increased to 89,203 tons, and on January 16 the quantity reported was 94,656 tons. There is thus an increase from the minimum of 8,948 tons. This change tends somewhat to weaken the market. Besides this the stocks in some of the makers' yards are also increasing. This is therefore a complete reversal of the tale that has had to be told over many months. British pig iron in public stores in tons is now as follows:

	Jan. 16, 1908.	Jan. 17 1907.
Connals's at Glasgow, Scotch	1,149	5,250
Do., other makes ...	500	4,000
Connal's at Middlesboro	94,645	521,600
West Coast hematite	7,055	79,600
Total	103,299	610,450

Pig Lead—Imported pig lead is quoted at about $4.25 locally, with Canadian lead about 15c lower. The market is steady with no special features to report.

Spelter — Buying is light, but the price keep firm at 5c for domestic and 5¼c for foreign.

Antimony — Quotations continue at from 10½c to 11c.

Old Materials—The demand is light, but there is some little buying from day to day. Prices are unchanged.

U. S. METAL MARKETS.

Cleveland, O., Jan. 30.—The Iron Trade Review says: Slightly over 46 per cent. of the Steel Corporation's blast furnace capacity is now in operation. In finished lines, there is a general increase in the percentage active, but the gain is so slight as to indicate scarcely more than the maintaining of the present pace. It is noteworthy that since the low level reached during the holiday weeks the rate of recovery has been much slower than during the corresponding period following the low point production in the slump of 1903-1904.

All the Lackawanna Steel Co.'s finishing mills, with the exception of the rail mills, are in operation. The Eastern Steel Co. has started up two additional open hearth furnaces, and several departments of its rolling mills. In the general manufacturing field throughout the east, however, the average of active capacity is still low, ranging between 25 and 50 per cent., according to the industry.

There is surprisingly little storage of pig iron in eastern furnace yards. Aside from one eastern Pennsylvania interest (Robesonia), which has close to 20,000 tons, there are few furnaces with as much as 2,000 tons of all grades upon their yards.

The plate situation is stronger. January bookings have been heavier than those of November or December and offers of attractive tonnages at slight concessions from the 1.70c Pittsburg base are being flatly refused. The expectation of a drop is vanishing.

Quebec and Maritime Provinces

Preparations for the Quebec Tercentenary—High Freight Tariff a Menace at Halifax—The Truro Foundry Co. Reorganize.

HALIFAX.

Halifax, N.S., Jan. 27.—The annual meeting of the Halifax board of trade was held last week when the retiring president, A. M. Bell, gave an admirable review of the work of the board during the year just closed. He said the matter of favorable freight rates must naturally engage the attention of every board of trade that aims to make the city it represents a distributing centre. Few cities would appear to be more favorably situated in this respect than Halifax, and yet there are a few places that have greater difficulties to contend with. For many years there has been a difference of one cent per hundred pounds against Halifax, as compared with Boston, Portland and St. John on all through freight originating west of Montreal or being carried west beyond that city. Efforts have been made by the board to have this discrimination removed, and at one time it was hoped that the board had been successful, but the Grand Trunk Railway claims that this is part of an agreement and it is to be regretted that matters are still in an unsatisfactory condition. The attention of the council of the board has recently been directed to the rates of freight by the Canadian Pacific Railway steamers from Antwerp to Halifax, which are higher than the rates to St. John. The council has taken this matter up with the Department of Trade and Commerce, but while they hope that these rates will be reduced, nothing can as yet be stated.

* * *

After disposing of a number of minor matters and deciding to hold a monster public meeting in this city of all Nova Scotia interests during the coming session of the legislature, to consider the All Red Line project, the board elected the following officers :

President—Geo. E. Faulkner.
Vice-President—C. H. Mitchell.
Vice-President—V. C. Stewart.
Council—H. R. Silver, A. E. Jones, John Neville, D. MacGillivray, W. A. Black, A. H. Whitman, R. G. Beazley, Edward Clayton, H. G. Bauld and W. G. Robertson.

* * *

The hardware committee of the board reported as follows :

The business in wholesale hardware lines has been above the average for the year 1906. There have been several causes for this, among which may be mentioned increasing activity in building operations. This has been particularly noticeable in this city, where extensive changes are being made by the Intercolonial Railway, including the erection of new machine shops and roundhouse.

In addition to these there has been the erection of buildings by the Silliker Car Co., the handsome building erected by the Canadian Bank of Commerce, the new building of the Chronicle Publishing Co., the Nova Scotia Telephone Co.'s building, and many others.

The good prices of fish during the past two years and the unusually high price of all farm products have also stimulated trade in all parts of the province, while for the first ten months of the year there was a steady advance in prices of nearly all kinds of hardware which was helpful to the distributing trade. During the last two months of the year there have been declines in the prices of some staple lines; these declines are largely due to disturbed financial conditions, and already there are signs that with a change in the monetary situation there will be a healthy reaction.

* * *

There is only a fair business passing in the hardware trade at the present time, the weather conditions having a rather bad effect generally. There is no demand for any special lines. Heavy frost in the early part of last week made business brisk for the plumbers,

GEORGE E. FAULKNER, M.P.P.
Elected President of the Halifax Board of Trade.

and also for the stove dealers. Business with the latter has been good right along, some of the firms having had difficulty in keeping up with the orders on hand. The rush, however, is about over.

* * *

The Truro Foundry and Machine Co., at Truro, N.S., has been reorganized, with a capital of $100,000, all common stock at $100 a share. Among those named as provisional directors are William J. Kent, lumberman; Andrew J. Campbell, barrister, Truro, and Ernest Crowe, lumberman, of Clifton.

* * *

The annual meeting of the Dartmouth board of trade was held last week with a large attendance of members. The officers elected were : President, A. C. Pyke (re-elected); 1st vice-president, C. E. Creighton; 2nd vice-president, W. C. Bishop; secretary, Wm. G. Foster; council, John Forsyth, James Harrison, H. W. Hewitt, A. C. Johnstone, H. R. Romans, Percy Simmonds, R. B. Simmonds and J. M. Weeks.

ST. JOHN.

St. John, N. B., Jan. 28.—Business continues rather quiet and there were no changes in prices during the past week.

* * *

The suit brought against the city by B. Mooney & Sons, contractors, for $25,000 for damages, for alleged misrepresentation in connection with their contract on the new water extension to Loch Lommond, has been before the Circuit Court the past week, and adjournment has been made to Feb. 11. The case has awakened a great deal of interest, and the evidence is closely followed by citizens generally. W. S. Fisher, of Emerson & Fisher, has been prominent as one of the jurors by his frequent questions to witnesses. It is possible a settlement may be reached before the case comes to the court again.

* * *

George Nixon, the oldest and one of the most respected merchants of this city, died on January 21, aged 81 years. Mr. Nixon started in business first as a hardware dealer, but in late years his attention was confined more to wall papers, window blinds and curtain fittings.

* * *

The valuation of exports from this port to the United States for the year ending Dec. 31, shows an increase over 1906 of nearly half a million dollars. A statement just issued by the U.S. consul shows :

Total for 1907	$2,967,924.70
Total for 1906	2,527,465.41
Showing gain for 1907 of	$440,459.29

The civic board of works is considering having borings made and a plan of Courtney Bay, on the eastern side of the city, prepared, so that information will be available in the event of the G.T.P. railway making their terminal here. F. W. Morse, general manager of the G.T.P., was in the city recently looking over the harbor facilities, with the view of seeing what could be provided in the way of shipping facilities for his road.

QUEBEC.

Quebec, Jan. 28.—Mayor Garneau has returned from Ottawa very enthusiastic about the movement at the Capital in aid of the Quebec Tercentenary, and the Battlefield Park project. He appears confident that the Federal aid will be at least $300,000, and that the necessary legislation for the appointment of the commission to be charged with the expenditure of the money will be introduced next week.

The Government will be asked to strike a commemorative medal representing the 300th anniversary of Canada's birth and Postmaster Lemieux is understood to have under consideration the issue of a special series of postage stamps, similar to those issued by the United States Government for the Jamestown Exposition.

Told by Ontario Correspondents

Woodstock Hardware Merchants May Form Retail Association—Guelph Merchants Find Weekly Half-Holiday Detriment to Business—Ald. Parsons, London Hardware Merchant, Retains His Seat—Galt Merchants Oppose Co-operative Bill—Board of Trade Elections at Chatham.

KINGSTON.

Kingston, Jan. 29.—Business in all its branches seems to have slowed down somewhat in this city. A number of the merchants have laid off part of their help owing to the slump in trade, but they will probably be taken on again with the opening of spring, when they hope for better business. Along about Christmas the trade naturally increased, but since then it has fallen off considerably. Workmen are engaged in fitting out the various steamers in order to have them in readiness when needed, and there is a demand for most lines of boat supplies and repairs at present.

* * *

Michael Sullivan, contractor, has signed the contract for the erection of the buildings at Royal Military College, which he was awarded. The price of the tender was $83,000.

* * *

John McKelvey, of the firm of McKelvey & Birch, who was confined to his home last week, through illness, has recovered, and is able to be around again.

* * *

Allan Lemmon, of the firm of Lemmon & Sons, who recently underwent an operation for appendicitis at the general hospital, has now fully recovered, and is able to resume his work again.

* * *

The presence at the city council meeting of an expert in heating from a central plant shows that this movement has reached a point in its development where it is considered practicable. Steam experts have for many years been experimenting upon the idea of forcing steam through pipes laid underground for long distances, without material losses of heat or force, but it is now pointed out that there is nothing that can be considered experimental in this system of heating, as it is more than twenty-five years since the first central station heating plant was constructed at Lockport, N.Y., where there are now some six or seven miles of underground steam pipe in operation. We have an illustration of what can be done in this way of heating in this city at Queen's University, where all the buildings are heated from a central plant, and we are informed, at a much less cost than they could be by a plant in each building.

WOODSTOCK.

Woodstock, Jan. 29.—Woodstock has two wire fence companies, which are among the growing industries of the city. They do a large home business, which is the best sign of a product's worth, and the Canadian Fence Company, one of the two (the other being the Standard) is at present, advertising through a local paper, with full pages, by means of publishing names of a large number of residents of the city and county, who have the fence on their property, and showing a few pictures of property surrounded by fence of their manufacture. It is practical advertising, of a kind that is apt to appeal to a good many people.

* * *

Merchants and business men are looking on the industrial and financial prospects with optimism, and see that the present conditions are only temporary. There are quite a number of men out of work, as the result of some of the factories lessening production, but they expect to get back shortly, and for the present, in most cases the savings of years of prosperity are sufficient to tide them over the lean season. Calls upon municipal and private charity have not been considerably greater than in other years. Hardwaremen are fairly busy, and have no great reason to complain, on the whole.

* * *

H. E. Moffatt, an inventor of many steam-working appliances, has issued a writ against Mr. D. W. Karn, chairman of the Water and Light Commission, and head of the big firm of the Karn Piano & Organ Company, claiming unstated damages for slander, as the result of statements which Mr. Karn made at the municipal nomination meeting, about a machine known as a purifier, the invention of Mr. Moffatt, and one of which he had sold to the Water and Light Commission, for use in the municipal plant. Mr. Karn stated that the machine had never worked satisfactorily, that it could not be used, and that Mr. Moffatt had "humbugged" the Commission. Mr. Moffatt complains that the circulation of these statements were used to injure his (the plaintiff's) business. The writ is a High Court one, and its progress will be watched with a good deal of interest, on account of the prominence of the parties interested, and the circumstances of the case.

* * *

Since the Woodstock branch of the Retail Merchants' Association was allowed to fade into oblivion, no attempt has been made to organize any sort of a scheme by which local merchants might get together for mutual benefit and improvement. A hardwareman was suggesting the other day that the members of that line in the city form an organization of their own, to prevent price-cutting and to give them an opportunity of cultivating the friendly side of commercial life. The idea is a good one, and should be followed up.

* * *

A comparison, such as was made in a recent issue, of the prices asked for "bargains" by the departmental stores, and the prices at which the same goods might be secured of the home dealers, should do much to put a stop to the practice of sending out of town for goods, were it widely published. There is no denying that a lot of people persist in buying from a catalogue. They apparently like the chance part of it, for that is what it amounts to.

GALT.

Galt, Jan. 28.—Your correspondent this week interviewed the Galt hardwareman regarding the Co-operative Act which is proposed to become law during the next session of Parliament. Several of the merchants had given the matter very little consideration, but those who have considered the question from both sides are much opposed to the measure for various reasons.

In the first place, said one hardwaremen, co-operative societies kill legitimate competition, which is recognized as the life of trade. A few citizens get together, continued this merchant, and form a co-operative society. There is no personal liability; the parties interested stand to lose nothing in case of failure. I have always understood that since the bill had been killed some years ago, that there was no possibility of its re-appearance, but since the bill seems liable to pass, I think it the duty of every merchant, hardware or otherwise, to do all in his power to prevent its passage. The act, which can result in no possible benefit, but on the other hand, will give irresponsible parties privileges which they are almosr certain to abuse.

The above was the opinion of all who have given the act any consideration, while those who previously thought it merely a political issue are now carefully studying the possible effect of the legislation.

The Retail Merchants' Association has passed a strong resolution opposing the act, and are making every effort to secure its defeat. The fact is that merchants of all classes in Galt who have given the matter any attention are strenuously opposed to the passing of the Co-operative Act.

* * *

The Stevens Co.'s foundry, which has been running short time for a couple of months, has resumed a ten-hour day.

* * *

Trade is picking up gradually, and the hardwaremen are confident of normal conditions with the opening of spring.

* * *

The local hardware merchants are considering the organization of a branch of the Retail Hardware Association. It would be of much benefit to the trade.

* * *

The sale of stoves in Galt this winter has been unusually small.

* * *

The natural gas service, which in previous winters has been affected by the cold weather, has thus far been very satisfactory.

* * *

"Could not be without Hardware and Metal," said a Main street merchant,

when discussing hardware affairs in general. "It is an index to the condition of affairs in our line all over the Dominion."

LONDON.

London, Ont., Jan. 28.—Hardware jobbers report orders for immediate delivery somewhat slow, but as regards spring orders, they have nothing to complain of. In retail lines trade is quiet.

* * *

A recount of votes cast in the recent municipal elections was held last week, the object being to give Ex-Ald. Cooper the seat in the council to which Robt. Parsons, the Dundas Street hardwareman, has been declared elected. The result was to decrease Parson's majority over Cooper from seven to six.

* * *

There is at least one local industrial concern which is preparing for a busy season, that is the London Concrete Machinery Company, which announces that during the summer and fall their establishment will be almost trebled in capacity.

* * *

An important change has been decided on by the McClary Manufacturing Company, being the conversion of their new five storey building in the southeast end into a warehouse exclusively, and the equipment of the premises in the main factory, which has been used for shipping purposes, with machinery for manufacturing. This change has been necessitated by the large number of orders in hand for delivery as soon as possible. Work will be commenced in the new foundries early in the spring.

* * *

The Standard Implement Company is the latest local enterprise to secure incorporation. The capital is $75 000 and the concern will be located here. Agricultural implements of various descriptions are the lines to which attention will be devoted. The company has secured control of some valuable patents. For the present, premises in the southern part of the city have been secured and when spring opens operations will commence with the employment of about twenty-five hands, which force will be increased as occasion demands. A Chicago man, E. Chamberlain who is a large shareholder, will be general superintendent of the manufacturing department.

* * *

The firm of D. McKenzie & Co., machinists, Richmond Street, has sold out and Mr. McKenzie has left for Dayton, Ohio, where he will engage in business.

* * *

The Grand Trunk car works extensions are now almost completed and both the new additions will be ready for use presently.

* * *

Henry Pocock, manager of the London Concrete Machinery Company, has disposed of patent rights to a brick making machine that is claimed to render obsolete all other devices of a similar character. The machine will be manufactured here, and a Los Angeles, Cal., firm have paid $10.000 for the right to make it in the United States.

GUELPH.

Guelph, January 28.—At least Tuesday's meeting of the Guelph board of trade a resolution was passed condemning the granting of bonuses, loans and special favors to factories and industries. Such bonuses have been largely abused, putting cities and towns into competition with other places. It was resolved that the board of trade request the legislature to pass an act prohibiting in future the granting of bonuses, giving of lands, guaranteeing of bonds, stocks or otherwise for industries or prospective industries or the selling of water power, gas or other services at less than cost for their use.

* * *

D. E. Rudd, stove and tinware merchant, Quebec Street, is selling out. He will still continue in the repairing business, having his shop located in the basement of the Mennonites church, Paisley Street.

* * *

Business is very dull at present, Everything continues quiet and hardware jobbers are busy taking stock, in preparation for the spring trade. Building prospects for the coming season seem very bright, so that a good year's business seems sure.

* * *

The Grundy Stove Co., whose men have been laid off for some time, state that they will probably reopen in the second week of February.

* * *

At the Travelers' Benefit Association annual meeting on Saturday in Toronto, H. F. Moulden and Andrew Grosbie, Guelph, were elected on the board of directors.

* * *

Your correspondent interviewed several of the hardware merchants of the city re the new co-operative bill. They expressed the opinion that even if the present co-operative association undertook the hardware business as well as the grocery, bakery and butcher businesses, they would only be one more establishment and that they would not undersell the present firms. They all express indignation at the new act, but otherwise they are not interested, as a co-operative company is already established here.

* * *

The foundry of the Guelph Stove Co. opened up on Monday, and now the factory is in full swing. They report that orders are coming in fast. At the time of the travelers' convention in Toronto this company intend to have a sample exhibit at No. 3 sample room of the Palmer House, Toronto, with R. F. Stewart and W. R. Faulkner in charge.

CHATHAM.

Chatham, Jan. 29.—The annual meeting of the Chatham Board of Trade on Monday evening was well attended, and keen interest was displayed in the proceedings. The chief feature of the business was, of course, the election of officers for the ensuing year. Manson Campbell, president of the M. Campbell Fanning Mill Co., was advanced from the post of vice-president to that of president, while W. H. Taylor, of the T. H. Taylor Co., was elected vice-president. W. R. Landon, manager of the Chatham Wagon Co., was re-elected secretary, and Jas. Simon was re-elected treasurer. Ex-President Gray is one of the fifteen councillors, the others being, W. T. Shannon, B. Blonde, Geo. W. Cowan, Chas. Austin, Chas. Hadley, J. S. Black, Archie Park, W. M. Stone, A. C. Woodward, S. Stephenson, E. R. Smith, D. McLachlan, M. Wilson, K.C., and John McCorvie. The list of officers is a good one, and 1908 should see some excellent work on the part of the Board of Trade in advancing the city's interests.

The Board of Trade has grown rapidly since it was re-organized last April, Treasurer Simon reporting that the membership, as shown by the books, has reached the record number of 202. This is pretty good for an organization which a twelvemonth ago was practically dead. Needless to say, the hardwaremen are well represented in this membership. An annual banquet will probably be held in the near future, the arrangements being left to the council.

* * *

Ald. W. H. Westman, of Westman Bros., left on Tuesday on a trip to the Pacific coast. He will spend a couple of weeks in Vancouver and New Westminster in the interests of his firm.

* * *

Tilbury has decided to stick to municipal ownership and operation in connection with its electric lighting plant. Recently the council received an offer of $2,500 from Thos. Vickerman for the plant, that gentleman asking a ten years' exclusive franchise. Detroit and Windsor capitalists were also after the plant, it is understood. The council, however, wanted $3,000, and, on Mr. Vickerman refusing to give that figure, decided to run the plant themselves. The plant will be set running as soon as possible.

* * *

A long distance telephone circuit has been completed by the Bell Company between Blenheim and Wheatley. The rapid extension of rural and long distance lines in Kent is a feature of the past year.

* * *

The Public Works Department has decided to wire the post office for electric lighting purposes, supplementing the gas service which has hitherto been in use. It is understood that tenders will be asked from local contractors.

* * *

Another Maple City industry has resumed operations, the Chatham Bent Goods Company re-opening this week, after having been shut down for a month.

LAWN GOODS.

Lewis Bros., of Montreal, have mailed to their customers a very useful 26 page catalogue describing and illustrating various lawn goods. This will prove of great benefit to intending purchasers of these articles.

West of the Great Lakes

Parcels Post System Rearranged in the West — New Industries Locate at Portage La Prairie—Freight Tariff Between Edmonton and the East— McKenzie Bros.' Store at Wadena, Sask., Edmonton and Strathcona Working Together.

PORTAGE LA PRAIRIE.

Portage La Prairie, Jan. 28.—At the annual meeting of the Portage La Prairie Board of Trade the following officers were elected: President, F. G. Taylor; Vice-President, J. S. Willmott; Secretary-Treasurer, H. W. Baker; Council, Mayor Edw. Brown, A. H. Dickens, H. Stephens, A. L. Hamilton, T. B. Millar, F. L. Newman, J. A. Tate, J. O. Cadham, J. J. Garland, J. D. Irvine, J. O'Brian, T. W. Prout, H. Armstrong, G. A. J. A. Marshall.

The results of the publicity campaign undertaken by the Board of Trade and Twenty Thousand Club have been gratifying. Inquiries of a general nature have been received from all parts of Canada, from the United States and from Great Britain. Many inquiries have been received relating to industrial openings and twenty representatives of industries seeking a location were brought to Portage La Prairie to look over the ground and investigate the openings for their lines of business. Many industries were forced to abandon their proposed extensions, temporarily, because of the unfavorable money market, but there is no doubt that with the return to normal conditions these plans will be put under way again. In the meantime the Portage La Prairie campaign has secured three new industries for the city, viz., an oatmeal and flour mill, a merchandise distributing warehouse and a distributing warehouse for agricultural implements in connection with rebuilding and repair shops.

EDMONTON.

Edmonton, Alta., Jan. 20.—Trade is flourishing in hardware stores in Edmonton perhaps more than in those of any other line in the city. There is a steady demand for all lines of hardware and the merchants all report a good business. Collections are rather difficult for money is tight, but it is generally expected that with the opening up of work in the spring everything will go forward with all its accustomed vigor.

* * *

The first of the immense amount of work in and around Edmonton will be started soon. The contract for grading the line of the G.T.P. for 125 miles west of the city has been let to Foley, Welsh & Stewart, and between 2,000 and 3,000 men are required for the work.

* * *

The building total for the year 1907 amounted to $2.268.210, as opposed to $1,868,069 the previous year.

* * *

The local union of plumbers and steamfitters held their annual banquet in the Club Cafe last week and spent a very enjoyable time. Among thos present were: Dr. Ternan, medical health officer, and master plumbers, J. W. Moulds, A. Lee, J. A. Lockerbie, C. Frost, A. J. Kemp and W. J. Carmichael, who has recently opened up business in the city. Dr. Ternan said that he thought the plumbers of the city were taking a step in the right direction by petitioning the legislature to pass laws whereby all plumbers must pass a satisfactory examination and thus show that they are fully qualified to carry on a business which, if left without the qualifying work, does much to injure the health of the district. He hoped that the legislature would see the force of this and legislate accordingly. The west is attracting all kinds of people and among them the failures. It would be very detrimental to allow these people to instal plumbing work which would be a menace to the health of the occupants of any building and therefore he heartily endorsed the action of this body in asking for the providing for the registration of plumbers.

J. W. Moulds, replying to the toast of the master plumbers, said he was in favor of paying the highest wages possible, but he wished to be understood that a rate of wages should be decided upon which would allow them to compete for outside work with a hope of getting their fair share of it.

* * *

The new Y.M.C.A. building, which cost in the neighborhood of $60,000, is practically completed. The formal opening will take place some time in February.

* * *

The retail clerks of Edmonton have elected the following officers for the ensuing term: Past President, J. S. Berkman; president, T. C. McCrae; 1st vice-president, B. S. Rothwell; 2nd vice-president, E. E. Davies; treasurer, E. D. LeRiche; financial and corresponding secretary, F. H. Drayton; recording secretary, J. P. Forsythe; guard, C. Edwards; guide, Geo. Cunningham; agent, A. E. Macdonald.

* * *

Ross. Bros.' Hockey Club met and defeated Lundy & McLeod in a strenuous game of hockey played here last week by a score of 7-1.

* * *

A new freight tariff has come into effect on the Canadian Pacific Railway, which is a considerable reduction on the old tariff, and is therefore welcome to the shippers of Edmonton. From Montreal to Edmonton the reduction on the old rate in class 1 is 33c. per 100 pounds; 12c. on freight in class 5, and 14c. in class 10. From Toronto the reduction is 18c. in class 1, 6c. in class 5, and 9c. in class 10. From Fort William the reduction is 3c. in class 1, 2c. in class 5, and 3c. in class 10. The greater proportion of the freight shipped to Edmonton from Fort William and points in Eastern Canada is in class 5. As the reduction on every 100 pounds is large, it will amount to a considerable sum on the larger shipments. This will be a decided benefit to hardware merchants, grocers, clothiers and indeed wholesalers and retailers in every line. By cutting down the freight charges it will enable these merchants to make a greater profit on the goods they handle, and will also enable them to sell their goods at a smaller price, thus directly benefitting the consumer. The following is a detailed comparison of the old rates with the new tariff, which came into effect recently.

From Montreal to Edmonton:

	Old Rate	New Rate
Class 1	3.52	3.19
Class 2	2.97	2.68
Class 3	2.35	2.14
Class 4	1.72	1.62
Class 5	1.52	1.40
Class 6	1.35	1.24
Class 7	1.06	.92
Class 8	.94	.84
Class 10	.94	.80

From Toronto to Edmonton:

	Old Rate	New Rate
Class 1	3.37	3.19
Class 2	2.83	2.68
Class 3	2.25	2.14
Class 4	1.65	1.62
Class 5	1.46	1.40
Class 6	1.30	1.24
Class 7	1.01	.92
Class 8	.89	.84
Class 10	.89	.80

From Fort William to Edmonton:

	Old Rate	New Rate
Class 1	2.47	2.44
Class 2	2.06	2.04
Class 3	1.65	1.62
Class 4	1.23	1.21
Class 5	1.11	1.09
Class 6	1.00	.94
Class 7	.71	.67
Class 8	.59	.59
Class 10	.58	.55

It will be noticed that by the new tariff the rate from Montreal and Toronto is now made the same, so that merchants here may import goods from Montreal as cheaply as from Toronto.

When the new freight tariff was finally adjusted, a meeting of the Edmonton board of trade was called to consider it. The board was satisfied with all the rates with the exception of those prevailing on the Canadian Pacific Railway between Edmonton and Calgary. It was thought that Calgary was being favored at the expense of Edmonton as the freight rate from Calgary to points north of Red Deer, midway between the two cities, was less than from Edmonton to points south of Red Deer. A committee was appointed to take the matter up with the C.P.R. and with the Board of Railway Commissioners. As a result of their efforts, a new tariff was issued by the C.P.R. on the line between Calgary and Edmonton. The freight rate to points south of Red Deer from Edmonton was reduced, making it equal to the rate from Calgary to points north of Red Deer. This gives Edmonton wholesalers an equal chance to compete with the Calgary wholesalers on this line. The freight rate from Edmonton south was made the same as that from Strathcona, whereas formerly there was an additional charge of 5c. per 100 pounds charged for transporting freight across the river between

the two cities. In addition special rates were given for freight from Edmonton to points the other side of Calgary; on the south to Macleod, on the east to Gleichen, and on the west to Revelstoke, B.C.

* * *

A movement is on foot to establish a Twin Cities Club in Edmonton and Strathcona, the purpose of which will be to work for the advancement of both cities. It will be composed of business and professional men of both cities and should be a great advantage to both. Speaking of the proposaff to form such a club, Secretary Harrison, of the Edmonton board of trade, said: "There is every indication that within the next eighteen months the joint population of Edmonton and Strathcona, which is now 22,500, will increase to 30,000. I would strongly advocate that the leading citizens of the two cities get together and form a Twin Cities Club. The time is ripe for such an action to be taken. Our general interests are identical; both cities contain men who have large interests in each. To-day the Twin Cities of Central Alberta contain a larger civic population than any other city west of Winnipeg and east of Vancouver.

"The outlook for an active and progressive year in the building line is good. The provincial university and C. P. R. shops in Strathcona; the capital buildings, court house and C.N.R. shops in Edmonton; the advent of the Grand Trunk Pacific and Canadian Pacific, the building of the C.P.R. high level bridge, etc. By August 1908 harvest time will have again arrived. British capital is flowing west and the future contains such promise that even the greatest pessimist will have to sit up and take notice.

"The passage of the new homestead pre-emption act will stimulate immigration to an extent unprecedented in the history of the west. The large number of letters received daily at the board of trade and the predictions of the United States immigration agents indicate this. The Peace River country, of which Edmonton and Strathcona are the gateway, is like a strong magnet drawing continuously and irresistibly the pioneer settler.

"If there ever was a period in the history of these two progressive cities that their advance will be rapid and substantial, it will be during the next eighteen months. Those who are disappointed and handicapped elsewhere are looking for locations in this vicinity. The tide is already advancing. Some have stated that Edmonton and Strathcona have passed through a period of prosperity but the future holds forth greater opportunities than ever to those who are wise enough to grasp the present and forge ahead with all confidence in the ultimate destiny of these twin cities of Canada."

REGINA.

Regina, Jan. 27.—Regina has been selected by the Post Office Department as the distributing point for Saskatchewan of parcels coming through the post from Great Britain.

Hitherto all matter sent through the parcel post from the Old Country to Western Canada, has been consigned to Winnipeg, at which place it was sorted and distributed to its various destinations. Of late, however, the parcel traffic has grown to such dimensions that it was found necessary by the postal authorities to somewhat re-arrange the system for dealing with parcels mailed to western points, and it was consequently decided to select additional distribution offices to deal with the parcels in the two new provinces. Calgary was accordingly chosen for Alberta, and Regina for Saskatchewan. Parcels for destination in either of those two provinces will be consigned straight through to those two cities, sorted and forwarded throughout the provinces.

The new system came into vogue on January 3, from which date all parcels for Saskatchewan consignees will be sent from Liverpool direct to this city, where they will be sorted by the local post office staff.

CALGARY.

Calgary, Jan. 26.—Plans are now out for the new buildings to be erected for the great Dominion Exhibition, to be held in Calgary from June 29th to July 10th, and advantage is being taken by the Exhibition management of the fine weather now prevailing to proceed with the work.

* * *

A Masonic Fair, on a large scale, will be one of the features of the Exhibition, and will be held on the grounds. It will be somewhat similar to the Masonic Fair held in Halifax, though not on the Exhibition Grounds, when the Dominion show was in that city.

* * *

The prospects of the Dominion Fair, even at this early day, are excellent. There are already about twenty carloads of thoroughbred stock exhibits entered from outside points, two Government and eighteen district exhibits of produce. Secretary Richardson says he considers the early development astonishing.

* * *

The following figures, as showing some of the larger buildings now being proceeded with in Calgary should be of interest to the readers of Hardware and Metal:

New Court House	$225,000
Registry Office	120,000
C. P. R. Depot	225,000
City Hall	150,000
Normal School	130,000
High School	70,000

Items such as the above will give some idea of the rapid increase in this Western town, and explain to a certain extent why wholesalers in all lines find it to their advantage to settle in Calgary.

During the last year there were eight new warehouses and additions built, costing $109,380, new factories and additions to the value of $97,900, and $150,000 worth of school extensions. The increase in custom receipts reached over two hundred and forty one thousand dollars, and the clearing house total for the year touched the very respectable figure of $69,745,006.

* * *

The following officers were elected at the annual meeting of the Board of Trade held last week: Hon. President, Hon. W. H. Cushing; President, A. E. Cross; First Vice-President, W. Toole; Second Vice-President, T. J. S. Skinner; Third Vice-President, A. T. Linton.

VANCOUVER.

Vancouver, Jan. 23.

Reporting on the labor question, which was expected to be quite a problem at the Granby mines and smelter, in the Boundary, Manager Hodges says that if they had twenty furnaces instead of eight they could man them easily, having had so many applications. At the mines also there is a long waiting list, miners having come from all over the country. The depression in the United States has sent many men adrift from mines in neighboring districts, and these drift over to British Columbia.

* * *

Work is now going on, in a cutting 40 feet deep in the east end of the city, whereby the Great Northern will get an easier grade down to tide level. This is a great difference from the terminal work at Seattle, where the same railway tunnelled under the centre of the city at a cost of several millions to reach tide-water on the harbor. The plans of the Great Northern include, when complete a new terminus in the city, and a wharf on the deep-water harbor front, where frontage has already been purchased.

* * *

Business is slowly re-opening and the promise for the immediate future is bright. Several mills are about ready to resume cutting of lumber, and a number of other industries are starting up for getting a large force of men in the woods. Many of them are now running with full force. Meantime lumber prices remain unsettled, though the meeting of the lumber association which takes place this week, is expected to bring that into some sort of line. At present lumber prices are on the bargain counter, and logs have also dropped to the lowest for some months.

* * *

Local dealers report that there is nothing but a sorting up trade being done with the retailers. None of them are yet ordering very heavily, awaiting activity in business before stocking up. All heavy stocks are pretty well represented, and most lines of shelf hardware are also quite full. Notes on price changes are very scarce owing to slackness in trade.

Brandon, Man., has decided to spend the sum of $100,000 on a new bridge over the Assiniboine River. It is undecided whether the structure will be of steel or reinforced concrete.

WADENA, SASK.

Wadena, Sask., Jan. 25.—Wadena is a village about 350 miles west of Winnipeg, situated on the main line of the C.N.R., that has enjoyed the rapid growth and prosperity which marks so many young communities in the west during the past few years. The village has not yet seen its third anniversary, but its growth has been so rapid that it will soon be gazetted a town.

A little more than two years ago immigrants coming into the settlement had to bring in their supply of household needs and provisions by team for a distance of 60 miles. The advent of the C.N.R., however, changed this aspect, and as a result the growth of the village has been healthy and rapid.

At present there are three general stores, two hardware establishments, and a drug shop in Wadena, besides a representation of most of the professions.

The accompanying cut shows an interior view of McKenzie Bros.' hardware store. As will be seen, the store is square planned and appears to be small for the amount of stock carried, but at the same glance it is seen that order predominates. Along the ceiling at the rear of the store may be seen a display of kettles and lanterns, which goes to show that if cramped for space the stock carried is carefully arranged and does not give an appearance of being crowded.

McKenzie Bros.' Store at Wadena, Sask.

The store is fitted in hardwood and is lighted with gas. A Bennett box system occupies one side of the store behind the counter, and an up-to-date silent salesman contains a line of first-class cutlery and pocket knives, which speaks for the prosperity of the district. The firm of McKenzie Bros. have met with success since locating in Wadena and as the village is a growing one it is likely that this firm will be increasingly strong in future years. In the illustration the members of the firm may be distinguished as being in their shirt sleeves, one behind the counter being busy with a traveling salesman who appears to be strictly "on the job."

INTERESTING LEGAL CASE.

A case of great moment to the raw fur trade is the one which Revillon Bros., of Montreal, are now contesting with the Quebec authorities at Hull in connection with having in their possession 400 beaver skins, which it is contended, were illegally purchased. The Quebec laws are very stringent on the point, and do not allow of any trading in these skins. A new phase has, however, been given to the long drawn out fight between the traders and the Quebec authorities as to the exact powers of the law, by the line of defence adopted by Revillon Bros. They contend that the Indians, from whom the skins were purchased, had the right by an old treaty with the Dominion to kill and dispose of beaver, and that, therefore, the Quebec law was ultra vires as applied to the Indians.

It is important that this point should be cleared up. Does an old treaty exist with the Dominion, and, if so, to what extent does the treaty nullify the rights of the Quebec Legislature? The whole question seems to be—if the Indians have a right to kill for a living, does this give them an equal right to dispose of the skins? The Quebec law says "no," and Revillon Bros. are now endeavoring to find out if the Province is within its rights in thus prohibiting sale.

D. Johnson, of the firm of Hiram Johnson, fur and skin importers, Montreal, interviewed on the question, said that a great deal of interest was being taken in the case. It was time that something was done to settle the bone of contention between the traders and the Indians on the one hand, and the Quebec Legislature on the other. No one could deny that the Indians had a right to trade for a living, and, why, therefore, should the authorities step in and take their rights away? In the case of muskrat, for instance, the authorities only allowed the animals to be caught in the month of April. But the Indians must catch them at other times of the year to live, and what were they to do with the skins? In the rights of equity the Indian should be allowed to dispose of the skins. It was a question whether the Provincial Government should be allowed to override the old rights granted to the Indians.

Max Goldberg, of the British-Canadian Fur Co., Montreal, said that it was high time that the matter was threshed out. If the Indians were allowed to kill the animals, they should be allowed to sell the fur, and it must not be forgotten that the Indians must kill to live. These people did not kill the game needlessly. They protected the hunting grounds as thoroughly as the farmer did his crops, for they recognized that they would be cutting their own throats to exterminate the animals. If the Indians were allowed to sell the skins openly, they would get more value for them, and would, consequently, hunt less.

The Montreal branch of the Hudson's Bay Company interrogated on the subject, thought that Revillon has a very good case. The Hudson's Bay Company, although it did not dispose of their right to trade with the Indians when the lands were purchased from them, had not found it possible to exercise that right. It had gone by in abeyance.

J. Riendeau, Inspector of Fisheries at Montreal, would express no opinion on the case. The reading of the law was plain enough, and that was all that there was to be said on the matter.

PROFITABLE SIDE LINES.

There are large profits to be made by handling side lines. Lines which are not classed as general hardware stocks, but which, if properly handled, in districts where a demand is felt, will be found to yield in most cases a larger percentage of profit than an equal value of general stock.

A selection of side lines is hard to arrive at, and must in every case be decided on by the merchant himself. The needs of his district must be the first consideration, for instance, if he is doing business in a town where numbers of summer visitors gather, he should lay in a stock of goods that will be called for by them, and if he depends on farmers' trade for his business, lines should be handled which are necessities on the farm. Many useful articles are offered for sale to dealers and it is necessary to take the greatest care when choosing side lines, as there are undoubtedly a large number of fake articles offered the unwary, which if handled, might easily prove a detriment to trade, instead of a benefit.

A line which is well recommended is being offered to western dealers by the Standard Chemical Co., Toronto, for the prevention of grain smut. Formaldehyde is a liquid gas, a solution of which is said to destroy grain smut and to aid germination.

MANITOBA HARDWARE AND METAL MARKETS

Corrected by telegraph up to 12 noon Friday, Jan. 31, Room 511, Union Bank Bldg, Winnipeg, Man.

Stock-taking is the order of the day with several local jobbing houses, and shipments will not be heavy until next week, when spring orders will begin to go out. The volume of spring shipments will be larger than was expected a few weeks ago. There has been a marked revival of confidence, and dealers who were afraid to order in December are now placing good orders for spring delivery. Country collections are showing considerable improvement.

Wire—Barbed wire, 100 pounds, $3.25; plain twist, $3.40; staples, $8.40; annealed wire, $2.90 base; oiled, 10c extra; bright iron, $3.10 base; brass spring wire, 32c base; plain galvanized wire, 6, 7 and 8, $3.70; No. 9, $3.25; No. 10, $3.70; No. 11, $3.80; No. 12, $3.45; No. 13, $3.55; No. 14, $4.10.

Poultry Netting—The discount is 57½ per cent.

Horseshoes—Iron, No. 0 to No. 1, $4.65; No. 2 and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to No. 1, $5; No. 2 and larger, $4.75.

Horsenails—No. 10 and larger, 22c; No. 9, 24c; No. 8, 24c; No. 7, 26c; No. 6, 28c; No. 5, 30c; No. 4, 36c per lb. Discounts; "C" brand, 40, 10, 10 and 7½ p.c.; "M.R.M." cold forged process, 50 and 10 p.c. Add 15c per box. Capewell brand, quotations on application.

Wire Nails—$3 f.o.b. Winnipeg, and $2.55 f.o.b. Fort William.

Cut Nails—Now $3.20 per keg.

Pressed Spikes—¼ x 5 and 6, $4.75; 5-6 x 5, 6 and 7, $4.40; ⅜ x 6, 7 and 8, $4.25; 7-16 x 7 and 9, $4.15; ½ x 8, 9, 10 and 12, $4.05; ⅝ x 10 and 12, $3.90. All other lengths 25c extra, net.

Screws—Flat head, iron, bright, 80, 10, 10 and 10; round head, iron, 80; flat head, brass, 75; round head, brass, 70; coach, 65.

Nuts and Bolts—Bolts, carriage, ⅜ or smaller, 60 and 5 per cent.; bolts, carriage, 7-16 and up, 55; bolts, machine, ⅜ and under, 60 and 5; 7-16 and over, 55; bolt ends, 52½; sleigh shoe bolts, ⅜ and under, 55; 7-16 and over, 45; machine screws, 60; plough bolts, 50; square nuts, cases, 2¾, small lots, 2¼; hexagon nuts, cases, 2¾; small lots, 2¼; stone bolts, 70 and 10 per cent.

Rivets—Iron, 60 and 10 per cent.; copper. No. 7, 36½c; No. 8, 37¼c; No. 9, 38c; No. 10, 40c; No. 12, 43c. Assorted, No. 8, 38½c and No. 10, 41½c.

Green Wire Cloth—$1.75 per 100 square feet.

Coil Chain—¼-in., $7.25; 5-16, $5.75; ⅜, $5.25; 7-16, $5; ½, $4.75; 9-16, $4.70; ⅝, $4.65; ¾, $4.65.

Shovels—Discounts are 40 and 5 p.c.

Harvest Tools—50, 10 and 5 p.c.

Axe Handles—Turned, s.g. hickory, $3.15; No. 1, $1.90; No. 2, $1.60; octagon, extra, $2.30; No. 1, $1.60.

Axes—Bench axes, 40 and 5; broad axes, 25 per cent. discount off list; Royal Oak, per doz., $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.50; Copper King, $8.25; Columbian, $9.50; handled axes, North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.75; Copper King, $10.50 per dozen.

Auger Bits—"Irwin" bits, 47½ per cent., and other lines, 70 and 10 per cent.

Blocks—Steel blocks, 35; wood, 60.

Hinges—Light "T" and strap, 65.

Hooks—Brush hooks, heavy, per doz., $8.75; grass hooks, $1.70.

Files—Arcade, 75; Black Diamond, 60; Nicholson's, 62½ per cent.

Locks—Peterboro and Gurney 40 p.c.

Stove Pipes—6-in., per 100 feet length, $9.25; 7-in., $10.

Tinware, Etc.—Pressed, retinned, 70; pressed, plain, 75 and 2½; pieced, 25; japanned ware, 35; enamelled ware, Famous, 50; Imperial, 50 and 10; Imperial, one coat, 60; Premier, 50; Colonial, 50 and 10; Royal, 60; Victoria, 45; White, 70 and 5; Diamond, 50; Granite, 60 per cent.

Galvanized Ware—Pails, 37½ per cent.; other galvanized lines 33 1-3 per cent.

Solder—Quoted at 27c per pound.

Lanterns—Cold blast, per dozen, $7; coppered, $9; dash, $9.

Churns—45 and 5; list as follows: No. 0, $9; No. 1, $9; No. 2, $10; No. 3, $11; No. 4, $13; No. 5, $16.

Wringers—Royal Canadian, $36; B.B., $40.75 per dozen.

Lath Yarn—10¾c.

Rope—Sisal, 10½c per pound, and pure manila, 14¾c. British manila, 11¾c.

Building Paper—Anchor, plain, 66c; tarred, 69c; Victoria, plain, 75c; tarred, 88c; No. 1 Cyclone, tarred, 84c; No. 1 Cyclone, plain, 66c; No. 2, Joliette, tarred, 69c; No. 2, Joliette, plain, 51c; No. 2 Sunrise, plain, 56c; Jubilee plain, 75c; Jubilee tarred, 88c; Buffalo plain, 66c; Buffalo tarred, 69c; Lion plain, 55c.

Corrugated Iron and Roofing, Etc.—Corrugated iron, 28 gauge, painted, $3; galvanized, $4.10; 26 gauge, $3.35 and $4.35. Pressed standing seamed roofing, 28 gauge, $3.45 and $4.45. Crimped roofing, 28 gauge, painted, $3.20; galvanized $4.30; 26 gauge, $3.55 and $4.55.

Ammunition, Etc.—Cartridges, rim fire, Canadian, 50 per cent.; American, 33 per cent.; pistol sizes, Canadian, 25 per cent.; American, 5 per cent.; military, Canadian, 20 per cent. off. American, 10 per cent. advance. Primers, $1.55. Loaded shells: English and Canadian makes, 12 gauge black soft, $18; 10 gauge, $22.50; 12 gauge smokeless, chilled, English, $24; Canadian, $23; 10 gauge smokeless, chilled, English, $28; Canadian, $27. Shot: Drop, per 100 lbs., $6.75; chilled, $7.15; buck, $7.55; 28 ball, $7.95. Powder: F.F., keg, Hamilton, $4.75; F.F.G., Dupont's, $5.

Iron and Steel—Bar Iron basis, $2.70. Swedish iron basis, $4.95; sleigh shoe steel, $2.75; spring steel, $3.25; machinery steel, $3.50; tool steel: Black Diamond, 100 lbs., $9.50; Jessop, $13.

Sheet Zinc—$8.50 for cask lots, and $9 for broken lots.

Pig Lead—Average price is $6.

Lead Pipe—Quoted at $7.25.

Copper—Planished copper, 33½ per pound; plain, 28½c.

Iron Pipe—Black pipe, ¼-in., $2.70; ⅜, $2.85; ½, $3.75; ¾, $4.75; 1, $6.75; 1¼, $9.25; 1½, $11; 2, $14.80; 2½, $24.60; 3, $32.30; 3½, $40.50; 4, $46; 4½, $54. Galvanized: ¼-in., $3.65; ⅜, $3.80; ½, $4.50; ¾, $5.80; 1, $8.40; 1¼, $11.40; 1½, $13.80; 2, $18.40.

Fittings—Wrought couplings, 55 per cent.; nipples, 70 per cent.; classified malleable fittings, 25 per cent.; malleable bushings, 50 per cent.; malleable unions, 55 per cent.

Galvanized Iron—Apollo, 16-gauge, $4.15; 18 and 20, $4.40; 22 and 24, $4.65; 26, $4.65; 28, $4.50; 30-gauge or 10¾-oz., $5.20; Queen's Head, 20, $4.60; 24 and 26, $4.90; 28, $5.15.

Tin Plates—I.C. charcoal, 20x28, box, $10; IX charcoal, 20x28, $12; XXI charcoal, 20x28, 14.

Terne Plates—Quoted at $9.50.

Canada Plates—18x21, 18x24, $3.50; 20x28, $3.80; full polished, $4.30.

Lubricating Oils—600 W. cylinders, 80 cents; Maple Leaf cylinder, $1 per gal.; 700 A. cylinder, 75c; Sterling cylinder, 55c; 600 A. cylinder, 50c; Capital cylinder, 59c and 54c; Solar red engine, 32c; Atlantic red engine 29c; heavy castor, 29c; medium castor 28c; Ruddy harvester 30c; standard gas engine oil 36c; Renown engine oil, 38c.

Petroleum and Gasolene—Silver Star, in bbls., per gal., 20c; Sunlight, in bbls., per gal., 22c; per case, $2.45; Eocene, in bbls., per gal., 24c; per case, $2.60; Pennoline, in bbls., per gallon, 25c; Silver Light, 22c; Starlight, 20c per gal.; Sterling Light, 24c per gallon. Engine gasolene, in barrels, gal., 25½c, f.o.b. Winnipeg, in cases, $2.60.

Bluestone—7c lb.

Paints and Oils—White lead, pure, $6.50 to $7.50, according to brand; bladder putty, in bbls., 2½c; in kegs, 2¾c; turpentine, barrel lots, Winnipeg, 77½c. Linseed oil, raw, Winnipeg, 65c; Calgary, 77c; Lethbridge, 77c; Edmonton, 78c; boiled oil, 3c per gallon advance on these prices.

A CORRECTION.

In an interview which appeared in Hardware and Metal recently, headed "Unfair Discrimination," the statement was made that the rate on fifth class freight from Winnipeg to Edmonton is lower than the rate from Winnipeg to Calgary. This statement was incorrect, as the rate in each case is 73 cents. Hardware and Metal's informant made the statement in good faith, evidently having been misinformed by some one in the railway offices or having misunderstood the information given him. The two rates are the same.

RECENT INVENTIONS.

Stove Pipe Fastener.

G. O. Helvig, Dawson, Minn., has invented a stove pipe fastener, adaptable in securing the ends of sections of pipe, particularly stove pipe made from sheet metal. It does not involve any specific construction other than the providing of one section with longitudinally-disposed slots extending a short distance inward.

Pipe Hanger.

I. G. Lane, New York, has invented an improved pipe hanger, specially adapted for supporting pipes in a vertical posi-

tion. The object of the hanger is to provide a means of effective operation, which will prevent the pipe from being displaced laterally.

Oil Heater Protector.

E. H. Brown, New York, has invented a protector for oil heaters, the object of which is to hold the heater firmly in place and at the same time to prevent persons from coming in contact with the oil, and also to protect walls and furniture from radiation. The protector also relates to stoves and furnaces.

Soldering Iron.

R. Packman, Zolo, Cal., has invented a soldering iron which contains an oil reservoir used to heat same. The invention provides devices for vaporizing the oil which heats the iron by means of a bunsen burner.

Door Fastening.

M. J. Flannery, Bozeman, Mont., has invented an improved automatic door fastener, which is appliable, especially to swing doors, but, in addition, to hinged doors, post office boxes, etc. When used on car doors a seal may be passed through the lugs instead of a padlock.

Mortise Lock.

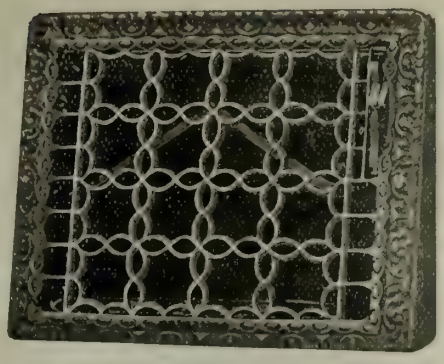
L. S. S. George, Kamloops, B.C., has invented an improvement in mortise locks of a novel nature. The improvement results in a lock in which the working parts are few, simple and compact, and wherein the latch and bolt work independently of each other, being operated by a knob and spindle, and the bolt by a suitable key.

Hardware Letter Box

Any questions on trade subjects will be answered by the editor in this department. Do you want any address, any special line of goods, anything relating to the hardware trade? Ask us. Letters from manufacturers, jobbers, travelers, retailers or clerks are solicited. Suggestions for trade improvement or discussions on trade evils are invited.

Asbestos Sad Irons.

"Subscriber" writes: "What is the address of the makers of asbestos sad irons?"



Answer—Dover Manufacturing Company, Canal Dover, Ohio.—Editor.

Tortoise Heaters.

Keenan & Ratchford, St. John, N.B., write: Charles Fawcett, Sackville, N.B., makes No. 6 size tortoise heater; size, 18x40; capacity, seven scuttles; list price, $32. This is in answer to the recent inquiry in your columns.

Brass Fittings Wanted.

Inquiry has been received at this office for information of jobbers or manufacturers of brass fittings for boat models. Kindly address communications re the same to Hardware and Metal.

Favorite Side-wall Registers

Are constructed with **one valve.** Have **handsome open-pattern face** with **flaring base,** which affords lots of **space for passage of warm air.**

When these registers are used, **one air pipe** can distribute **heat** to **four rooms,** two on ground floor and two above, if properly proportioned.

Heating and Housefurnishings

Size and Arrangement of Furnace Pipes

From the book issued for the assistance of furnacemen by Giblin & Co., Utica, N.Y., is taken the following, which will doubtless be helpful to the beginner in furnace work and probably to those of judgment ripened by several years of experience :

Hot Air Pipes.

The upper edge of all hot air pipes on the furnace must be at the same level, connected to casing or brickwork so as to allow a gradual rise to the register, always keeping in view the fact that the greater the inclination of the hot air pipe, the more rapidly the hot air will rise and the greater will be the volume of heat obtained. Great care should be observed in deciding on pipes and their location on casing, that some pipes may not take the air that should go to others. Avoid taking off pipes from casing immediately over the feed door. Where side wall registers are used on first floor great care should be taken not to reduce the capacity of pipe, boot, throat or register box, when changing from the round pipe to the square boot, or register box. Always remember that the area or capacity of the hot air flue is no larger than the smallest place in it. All upper floor pipes should be provided with dampers near the furnace by which the heat can be shut off when not needed and thus prevent loss of heat by radiation from pipes. Long horizontal pipes should always be avoided if possible. All hot air pipes should be covered with asbestos paper. All risers running to second and third floors should be about three-quarters the capacity of the round pipe connecting same to furnace, and should be run as straight as possible avoiding all acute angles. The size of a pipe necessary to heat a given space is a matter of nice judgment in each particular instance, the selection should be based on conditions of climate, prevailing winds, exposure and construction of the building to be heated, the glass surface, the outside wall surface, location of the heater, and the length and elevation of warm air pipes. If in doubt about the size of any pipe always use the larger.

How to Figure.

To determine on the size of a hot air pipe to heat an ordinary living room on the first floor, the following rule will be found useful :

A pipe for any room should contain as much area or square inches capacity as there are : 1—The square feet of glass surface. 2—Five per cent. of the outside wall surface. 3—One per cent. of the cubical contents of the room. For example, a room 15x16x10 feet ceiling with 39 square feet of glass surface, 300 square feet of outside wall surface and 2,400 feet of cubical contents :

	Sq. in.
39 sq. ft. of glass surface	39
5 p.c. of 300 sq. ft. outside wall	15
1 p.c. of 2,400 cubic feet	24

Capacity of pipe required for room 78 square inches of heating surface.

For north and west exposures add from 10 to 20 per cent. to size of pipes; for sleeping rooms on second floor have pipes 25 per cent. less capacity than for first floor ; for rooms on third floor use pipes with 20 per cent. less capacity than on second floor. However, do not use less than an 8-in. pipe no matter how small the room. The above rule is based on favorable conditions and on ordinary runs. On long runs increase size of pipes accordingly, always using registers with a greater capacity than the capacity of pipe connected to same. When using the above rule in churches, auditoriums and all buildings where there is no attic between ceiling and roof, ceiling must be figured as outside wall surface. In all buildings with but one room to be heated we advise where possible to use one hot air pipe with register directly over furnace of sufficient capacity to heat the entire room, using registers without valves.

Size of Furnace.

We offer the following suggestions for selecting a furnace to heat a given amount of space : First determine from rule the size pipes necessary to heat the respective rooms and the combined area will determine the size furnace required in ordinary cases. For example :

	Square inches capacity.
One room with 12-in. pipe corresponds	113
Three rooms with 10-in. pipe corresponds	234
Two rooms with 9-in. pipe corresponds	126
One room with 8-in. pipe corresponds	50
Total pipe capacity	523

Hence this would require a furnace with a capacity to fill at least 523 sq. in. of area in the pipes leading from it with hot air. The above capacities can be secured only when the apparatus is properly installed.

STOVES BURNING SOFT COAL.

A new principle has been discovered and applied to the manufacture of a new soft coal stove by the Rock Island Stove Company, of Rock Island, Ill., which the manufacturers claim will revolutionize the soft coal heating stove industry.

This is what is said of the new stove:

Numerous attempts have been made to build stoves for burning soft coal, with side or bottom base flues, but with poor success, because they will rapidly choke with soot, and because turning a soft coal draft down chokes it and causes smoke and bad smell in the house. Up to now people who want to use soft coal for economy's sake have had to forego the satisfaction of base heating without dirt or trouble.

This new stove operates on an entirely new principle. It has flues carrying hot air into the base before the air enters the fire and the draft from the fire is not reversed in any way.

Base Sizzling Hot.

This hot air travels over surfaces that are generally nearly or quite red hot and the air acquires a temperature that heats the base of the stove nearly or quite as hot as the base of a hard coal base burner. The base in this stove has been made hot enough to "sizzle" water under test. No need to say that this will add to the floor heating power of the stove. At the same time the firepot is exposed for radiation and the upper body is also fully exposed.

All this is accomplished without any down draft from the fire, and by means of flues that will never choke up from any cause. The simple operation of opening the draft register puts the base heating current into active operation. It is a non-chokable, soft coal base heater.

This new stove is also supplied with an improved air circulating tube. This tube under test has delivered air heated to over 600 degrees (and the hot air that heats the base is just about the same temperature). This tube circulates a great deal more hot air from the floor than any hard coal base burner.

Will Not Choke With Soot.

It is claimed that this new stove that burns soft coal and has no flues to choke up with soot, heats from the base about

TABLE OF SIZES OF PIPE.

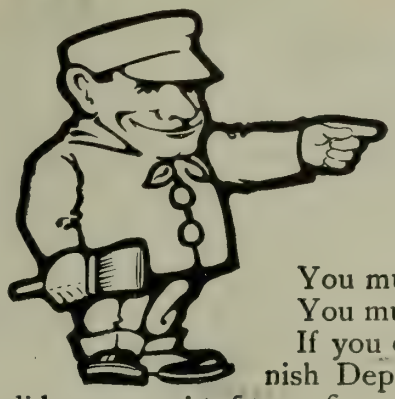
8x10	53	8	50	900	700
9x12	72	9	63	1,500	1,200
10x14	93	10	78	2,400	2,000
12x15	120	12	113	3,000	2,600
14x20	187	14	154	4,800	4,000

The accompanying table is based on favorable conditions, with the proper supply of cold air and ordinary runs. On long runs increase the size of pipes accordingly.

as well as a hard coal base burner, and circulates more air and hotter air than any base burner made.

The air that heats the base is afterward used for draft, both direct draft and top hot blast draft through slotted tubes in the fire-pot, which deliver air into the sides and over the top of the fire, giving this stove a superheated direct draft and a superheated hot blast draft, both hotter than can be obtained in any other construction. The hot draft being in big volume, a most important point, the combustion of soft coal is more nearly perfect in this stove than in any heretofore made.

Used according to directions, it is claimed that the draft will be free from smoke, the soot will be burned along with the gases so that there will be no soot deposit in the stove or pipe and there will be no clinkers, nothing but fine ashes. This result will follow the use of either lump or slack coal.



A FURNACE ADVANTAGE.

One of the greatest advantages of the furnace heating system is the fact that the heating cannot be done without ventilating the building, particularly when the supply of air to the heater is taken from out of doors, the freshest source of supply of pure air. This pure air when warmed only finds its way into the building when the air that was there before its arrival has been forced out through some crack, crevice or ventilating flue provided for the purpose.

GERMAN IMPROVED SELF-COOKERS.

Fireless stoves, or self-cookers, as they are variously known, have been in use in Germany for a number of years, so that they may now be classified as successful. The earlier types were merely boxes constructed with double walls, or by secret processes built so as to retain heat when sealed. These cookers, which are still on the market, are used as follows: After a thorough heating, food to be cooked (stewed or boiled) is placed inside the box, sealed, and left for a sufficient time, when it is opened, and the food, cooked by the retained heat, is ready to serve. Recently a company here has improved upon the apparatus and produced a fireless stove that not only cooks, but fires and roasts. Profiting by past failures and successes the company has perfected a cooker that, although on the market but a year, has already proved very popular. Frying and roasting are accomplished in the new cooker by the use of a heated stone. The stone is thoroughly heated in an oven, over gas or any fire, and placed in the cooker with the steak or roast. The box is sealed up and left for an hour or so, as required, then opened, and the food is fully prepared and hot. In the double boxes all three precesses may proceed at one time without care or difficulty. The owners of the patents on this latest apparatus claim that the sales in the coming year will exceed 50,000 cookers in Germany and Switzerland.

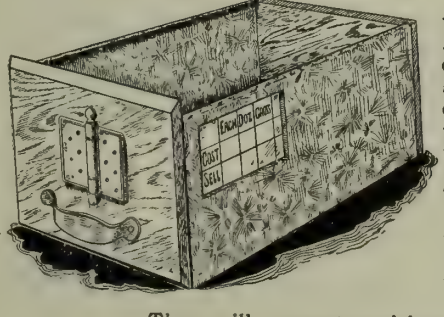
A dealer cannot get a low price unless he seeks it. A salesman cannot get a fair price unless he asks it. Each in his place.

Let Sherwin-Williams make money for you this spring

You must make your plans soon for spring business.
You must decide what lines to handle.
You must decide whose goods to sell.
If you do not have a Paint and Varnish Department you will lose a splendid opportunity for profit.

If you handle Sherwin-Williams Products you will have a double opportunity to make money out of Paints and Varnishes. You will make a profit out of them, the same as any paints or varnishes, and

Sherwin-Williams will Make Money for You.



The Sherwin-Williams Agency is not a mere stock of goods. It is a proposition—a money making proposition for dealers who have it. It sells paint and varnish to the dealer's customers.

If you will write us we will tell you the hundred-and-one things we do to sell the goods from our agent's shelves and increase their trade and profits. This will put you under no obligation to buy.

THE SHERWIN-WILLIAMS CO.
LARGEST PAINT AND VARNISH MAKERS IN THE WORLD
Canadian Headquarters and Plant: 639 Centre St., Montreal, Que.
Warehouses: 86 York St., Toronto, and Winnipeg, Man.

300

Some Goods Sell Themselves

that is if they are properly displayed. Articles like wrenches, floor spring hinges, expansion bolts, squares, rules, automatic awls and screw-drivers, etc., should be accessible to customers; not hidden away in packages. Keep them in view if you want to sell them.

The best salesman is the man who creates a demand for goods, convinces customers they want articles they had not thought of buying. Display your goods well and they will act as silent salesmen for you.

They will suggest articles customers had not thought of buying.

The Bennett Steel Shelf Box

is the strongest and most serviceable box made. It has steel sides and wood front and back. There are no nails on the outside, the steel is locked into the wood by our own patented process.

Canadian Postal Department Affairs

Some Recent Extensions of the Service —Comments on Matters of Interest to Hardware Merchants.

ONE CENT POSTAGE.

The question of one-cent postage for letters delivered within the city was discussed recently by the Montreal Chambre de Commerce. It was brought up by Alex. Prudhumme, who explained that it would be of great advantage to business men. At present many employ messengers to deliver mail within the city limits, finding it cheaper to do so. However, this method of delivery had its inconvenience. If postage were reduced to one cent, it would induce business men to use the mails instead, which would insure not only more prompt but safer delivery. It was decided to write the Postal Department at Ottawa, asking that the suggestion be given consideration. Joseph Fortier suggested that steps should also be taken to have postage to France reduced to the same tariff as for any part of the British Empire. This was referred to a special committee.

AGAINST THE PARCELS POST.

There are a good many newspapers that draw their advertising patronage from local merchants, but which frankly endorse the proposed parcels post law. As these newspapers live largely upon their advertising it is certainly a shortsighted policy to seek to promote a measure that will work an untold hardship with their best customers.

The parcels post is superficially popular with the masses and consequently with many short-sighted editors, because they oppose the express company monopoly and do not understand the far-reaching dangerous potentialities of the proposed measure. J. W. Kilpatrick, president of the Retail Merchants' Association of Georgia, has been publishing some exceedingly pertinent facts in the papers of that state about the parcels post. Here are some extracts :

"Of course, the express companies are made a scapegoat by the parcels post advocates, but if their charges are exorbitant, why does not the same power, federal and state, that regulates common carriers through the interstate commerce commission and the state railroad commissions, regulate them ? Naturally, the express companies would dislike to have competition in the parcels carrying business by Uncle Sam, just as naturally as the mail order mercantile trust would.

"The home merchants are ready to answer the charge of selfishness in opposing a parcels post. They are fighting, in many instances, for their very business life ; but if they fail the general prosperity of every local community fails with them. If the outlet of the home merchant is circumscribed by catalogue house competition until he is driven out of business, his wholesalers and jobbers in the home city will find their outlet proportionately circumscribed. and the home manufacturer will be in the same boat, for the 'cat' houses run their own factories. Thus at one fell swoop the very heart of local home industry will be stricken, and when the home merchants, jobbers and manufacturers go to the wall, the whole fabric of domestic progress goes to the ground like a house of cards. The result would be equal to a panic in every community, for local banking interests and the man who works for wages would suffer with the rest. Even the farmers who are being deluded into signing parcels post petitions through the mail order store campaign fund, would find the selling value of their farms shrink many dollars per acre, for it is the enterprise of the country merchant largely in building up good trading points near their farms that has enhanced rural land values, and, for that matter, made rural free mail delivery possible.

MONEY ORDERS DELAYED.

A correspondent writes from London, Eng., to "The Mail and Empire" as follows :

"Permit me to state the following facts in the hope that publicity may abate the evils complained of. On the morning of Dec. 19, a P.O. order for fifteen pounds odd was taken out in my favor at Toronto, payable at the G.P.O., London. The order reached here on Dec. 29, and was presented by me for payment on the afternoon of Dec. 30. Payment was refused on the grounds of "No advice from Toronto." I again presented the order on the evening of Jan 3, and met with the same reply. I urged the matter as strongly as I could, and was referred to the comptroller's office, a third of a mile away, where I stated my case again, lost a lot more time, and was again told, "Nothing could be done, there was no advice from Toronto." I pointed out that the order had been in my possession nearly a week, and that surely the Government ought to be able to get through advice of the order as quickly as I, a private individual, had been able to get the order itself. I was then told that "Advices of Canadian orders were sometimes as much as a fortnight behind." At this writing I am still without my money, after losing at least half a day and spending over a shilling in fares. I have had several experiences of this kind now, and wish to let people know that if they wish to send small sums to England, a bank draft is quicker and better and as cheap, or cheaper, than the P.O.—the latter often gives one a very bad rate of exchange. The post office officials ought to look into the matter at once."

* * *

The above shows a weakness in the P.O. Department that should be remedied without delay. Hon. Mr. Lemieux is undoubtedly doing the best he can to remedy the defects imposed on the service by the Mulock administration, but until he can get better men as permanent heads of his department he cannot expect much improvement.

The principle of promotion of employes to higher positions on the staff cannot be ignored if the postal service is to be made the business administration it should be. Postmaster-General Mulock violated the rule repeatedly, notably in the appointment of a professional man to the deputy postmaster-generalship. Again the mistake is to be made in selecting a politician for the postmastership of Toronto, although, in this case the appointee is to be a business man, given preference over a lawyer.

Every business depends upon a prompt and impartial service rendered by the Post Office Department and this branch of the public administration should, therefore, be above the machinations of political wire-pullers. Give every part of Canada the best service possible, paying living salaries to the postmasters and carriers and merchants will be satisfied with the service.

RURAL MAIL DELIVERY.

Rural mail delivery must come, but everyone will see that if there is not to be permanent deficits in the Postoffice Department great caution must be exhibited in making a beginning, says the Toronto Globe. It ought to be quite possible, however, to establish a population test as the means of deciding whether a locality had grown to the position of being entitled to a daily mail delivery. It might also be made a rule that extensions could only take place when there were surpluses. In the United States it is charged that Congressmen use the rural mail delivery as a means of bribing constituencies, with consequent annual deficits. We should profit in Canada by their experiences.

TO EXTEND MAIL DELIVERY.

Mr. Monk has given notice of a resolution in Parliament urging that in case of cities where a free mail delivery is established such free delivery should be extended to all contiguous districts, which, though situated outside the municipal limits proper, can easily be reached by the city delivery system.

HARDWARE IN AUSTRALIA.

During 1907 the imports from Great Britain into Australia of hardware and machinery show increases under nearly every heading. The following is a list of the principal items imported from England during the first eight months :

Article.	Quantity.
	Tons.
Pig iron	2,570
Iron castings	112
Iron forgings	4
Bars, rods, angles, etc.	23,170
Cast iron manufactures	2,397
Wrought iron manufactures	3,516
Rails	49,929
Railroad iron and steel, unenumerated	3,448
Wire	2,786
Wire manufactures	15,813
Plates and sheets	12,477
Galvanized iron	49,765
Tin plates	9,434
Hoops and strips	2,090
Anchors, chains, etc.	1,414
Tubes, pipes and fittings, wrought	13,000
Pipes and fittings, cast	3,173
Nails, screws and rivets	2,231
Bolts and nuts	2,671
Bedsteads	1,232
Steel ingots, etc.	626
Steel castings	110
Steel forgings	11
Steel bars, angles, shapes, etc.	12,121
Steel and iron manufactures, unenumerated	1,460
Copper, wrought or manufactured.	1,345
Cutlery, value	$425,439
Hardware	2,693

Trade Announcements

Catalogues, booklets and other printed matter issued by manufacturers, jobbers, etc., for distribution to the retail trade will be reviewed in this department. Senders of catalogues, etc., for review should draw attention to new lines and retailers, when sending for samples, etc., should mention this paper to show that they are in the trade.

A 1908 Motto.

A neat envelope enclosure sent out by the Dominion Cartridge Co., Montreal, advises customers to "Keep Canadian Money Circulating in Canada" by buying Dominion ammunition, guaranteed equal or better than the imported.

English Made Saws.

Spear & Jackson saws, made by this company at the Etna Works, Sheffield, England, are increasing in demand on the Canadian market. The products of Etna works are fully guaranteed and are carried by a large number of wholesale hardwaremen in the Dominion. If your jobber does not handle these saws the business cards containing information about the saws will be sent free of expense by mentioning this paper.

Ideal Gas Stove.

The Ideal Manufacturing Company, Detroit, have issued their new catalogue for 1908. The booklet is carefully compiled and contains much valuable information regarding the "Ideal" gas stoves and ranges. The Ideal Manufacturing Company is the originator of the elevated oven, as applied to gas stoves, and their new catalogue contains a number of new points which should add to the popularity of this line. The catalogue will be sent free to dealers on mentioning this paper.

PORTABLE WINDOW PLATFORMS.

Every window trimmer who has to work with small windows should have on hand a set of easily portable and interchangeable boxes which may be combined in different ways to form platforms increasing in height toward the back of the window. These boxes can be made of unpainted pine, but they should be substantial enough to stand one upon the other securely and to bear considerable weight. The window trimmer should figure out for himself what their dimensions should be, but for the ordinary small window boxes half as long as the window is wide and about 12 inches square will be found convenient. Enough of these boxes should be provided so that a series of steps or platforms rising in height toward the kack of the window may be easily and quickly built up.

Some suitable covering of a shade which will harmonize with the goods to be displayed can easily be thrown over these steps or platforms and are ranged in loose folds and puffs so as to present a very artistic appearance.

Montreal may soon be connected with New York by a great ship canal. The project is by way of the Hudson River, Lake Champlain and the St. Lawrence. The proposed canal will cost many millions of money, and the work of excavating has already commenced at the southern end of Lake Champlain.

CONDENSED OR "WANT" ADVERTISEMENTS.

RATES.

Two cents per word first insertion; one cent per word subsequent insertions.

Five cents additional each insertion where box number is desired.

Contractions count as one word, but five figures (as $1,000) are allowed as one word.

Cash remittances to cover cost **must** accompany all advertisements. **In no case** can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

RULES FOR COPY.

In addressing replies care of HARDWARE AND METAL don't fail to give box number.

Replies addressed to HARDWARE AND METAL boxes are re-mailed to advertisers every Monday, Wednesday and Friday.

Requests for classification will be followed where they do not conflict with established classified rules.

Orders should always clearly specify the number of times the advertisement is to run.

All "Want" advertisements are payable in advance.

AGENTS WANTED.

This is the problem of many manufacturers who are anxious to get a foothold in Western Canada. It will be easily solved if HARDWARE AND METAL is given the opportunity to solve it.

AGENT wanted to push an advertised line of Welsh tinplates; write at first to "B.B.," care HARDWARE AND METAL, 88 Fleet St., E.C., London, Eng. [tf]

TILES—Plain enamelled, decorated majolica, ornamental, rough surface, and many other kinds, suitable for walls, hearths, furniture backs, dadoes, radiator recesses, etc. Messrs. J. H. Barrett & Co., Ltd., Stoke-on-Trent, England, are open to appoint agents in Toronto, Montreal, Winnipeg, Ottawa, Hamilton, London, Ont. [5]

FIRST-CLASS English firm, manufacturing A1 line of metal polish, wishes to secure Canadian agents for Maritime Provinces, and Western Canada. Have already secured agents for Ontario, who have handled their line for nearly a year, and have found it very ready seller. For full information apply Box 690, HARDWARE AND METAL, Toronto. (4tf)

ARTICLES FOR SALE.

Don't keep any fixtures or tools around your store for which you have no further use. They are worth more to-day than they will a year hence. Don't keep money tied up which you could use to secure discounts from your wholesaler.

FOR SALE—Stock of cut nails, sizes 60D to 3D; no 40D or 4D in stock; stock in first class order; price $2 base, F.O.B. Paisley. A. Sinclair Estate, Paisley, Ont. [5]

FIRST-CLASS set of tinners' tools complete with benches, cheap if sold at once. For particulars write Box 54, Unionville. [6]

FOR SALE—Set of tinsmith's tools complete; great bargain for cash. For particulars write. W. A. Matthews, Cannington. (4)

QUANTITY of black sheet steel 16 gauge from 30x72 to 60x96; galvanized up to 42x96. W. S. Gordon, Tweed, Ont. (6)

ARTICLES WANTED.

If you cannot afford to buy a new counter, show case, screw cabinet, store ladder, or some other fixture which you could use to advantage, try a "Want Ad." under "Articles Wanted," and you may get what you want at a bargain price.

PRICES and full particulars required for 200 yards second-hand standard gauge rail (about 60-lb.) and sleepers, with 3-ton locomotive, steam jib crane complete, by C. & W. Walker Ltd., Newport, Shropshire, England. (4)

BUSINESS WANTED

WANTED—Good live hardware business in Ontario, city or town preferred. Box 677, HARDWARE AND METAL, Toronto. (2)

BUSINESS CHANCES

FREE OFFER TO TINSMITHS—Can you draw the pattern of a square mitre for an O.G. eave trough? If not send for full particulars regarding our sheet metal pattern course and we will send you free drawing and instructions showing how to draw the pattern for a square mitre. Address the Sheet Metal School, Box 419, Galt, Ont. (5)

HARDWARE, stove and tin business in one of the best manufacturing towns in Ontario; stock nine thousand; clearing two thousand yearly. Principals only dealt with. Address Box 693, HARDWARE AND METAL, Toronto. (8)

HARDWARE business for sale in live town near Toronto; established over 30 years; includes store building and tinsmithing department; good reasons for selling. Box 686, HARDWARE AND METAL, Toronto. [8]

WANTED—Good live hardware business in Manitoba, Saskatchewan or Alberta. Owners only. Box 22, HARDWARE AND METAL, Winnipeg. (10)

HARDWARE, stove and tinsmithing business; the best in this section; established over 35 years; reasons for selling, death of proprietor. Box 692, HARDWARE AND METAL, Toronto. (6)

SITUATIONS VACANT.

You can secure a "five-thousand-a-year" manager, or a "five-hundred-a-year" clerk, by stating your wants under "Situations Vacant."

HARDWARE salesman wanted—Give age, experience, and all particulars. J. S. Moir, Arnprior, Ont. (5)

TRAVELING position wanted by hardwareman, seven years wholesale experience; 5 years' experience on road; best references. Box 687, HARDWARE AND METAL, Toronto. (6)

SITUATIONS WANTED.

Travellers, clerks, or tinsmiths, wishing to secure new positions, can engage the attention of the largest number of employers in their respective lines, by giving full particulars as to qualifications, etc., under "Situations Vacant."

WANTED — Position as foreman tinsmith and plumber; would take an interest. Box, 683 HARDWARE AND METAL, Toronto. [4]

WANTED—Position as foreman tinsmith; 18 year's experience; can do plumbing, lead or iron pipe. Box 685, HARDWARE AND METAL, Toronto. (5)

WANTED—Position as hardware clerk: good references. Apply Box 165, Wolseley, Sask. [7]

TINSMITH wanted for Manitoba, experienced in bench and sheet metal work, furnace work; eavetroughing and roofing, pipe-fitting and work usually done in a country shop; must be a worker and regular in habits; state wages and experience. Address Box 691, HARDWARE AND METAL, Toronto. [7]

WELLAND CANAL

Tenders for Supplies for the year 1908.

SEALED TENDERS for Supplies addressed to the Superintending Engineer, Welland Canal, St. Catharines, will be received until 16 o'clock on Monday, the 10th February, 1908, for the supply and delivery of various articles of Timber, Hardware, Castings, Fuel, Paints, Oils, etc., for use on the Welland Canal and its branches for the year 1908.

Specifications, forms of tender and other information may be obtained at the Superintending Engineer's Office, St. Catharines, on and after Tuesday, 21st January, 1908.

The lowest or any tender not necessarily accepted.

By Order,

L. K. JONES,
Secretary.

Department of Railways and Canals,
Ottawa, January 17th, 1908.

Newspapers inserting this advertisement without authority from the Department will not be paid for it. (5)

BUILDING AND INDUSTRIAL NEWS

For additional items see the correspondence pages. Information is solicited regarding building and industrial news, the incorporation of companies, establishment or enlargement of mills, factories or foundries, municipal water works and sewerage systems, railway or mining news, etc.

Industrial Development.

American capitalists are prospecting gypsum deposits at Little Narrows, Cape Breton, to locate a suitable point for a quarry convenient to shipping.

The Northern Foundry and Machine Co., of Sault Ste. Marie, Ont., are starting a foundry and machine shop to do all kinds of repair work. They expect to be running early in February.

A joint stock company, with an authorized capital of $150,000, known as "The Brass and Steel Goods, Ltd.," has established a factory at Campbellford for the manufacture of brass goods.

Hamilton's Fire and Light Committee will call for new tenders for pumps. Tenders have already been received, but owing to a technical mistake in the tender, of one company, the above step was decided necessary.

The Hartley Foundry Co., Brantford, have just completed a fine new foundry building, with small pattern shop in connection. The building is 50x100 feet. They do jobbing work for contractors and local manufacturers.

The new molding shop of the Gartshore-Thompson Pipe Foundry, Hamilton, has just been completed. This molding shop is designed to do jobbing work and small repetition work for their pipe foundry. The management are considering the installation of molding machines.

At the annual meeting of the shareholders of the Goold, Shapley & Muir Co., Brantford, held Jan. 18, it was decided a new machine shop 132x54 feet; should be erected during the present year, and also a wood shop 100x54 feet. The machine shop will be equipped with a traveling crane.

The plant of the Berlin Mfg. Co., Hamilton, manufacturers of woodworking machinery, is just about completed; and the installation of the machinery has commenced. This firm are having all the ordinary tools made in Canada, but are bringing some special machinery from the States. It is thought that by spring the company will be able to commence work.

J. F. B. Vandeleur, Canadian agent of Messrs. Evershed & Vignoles, electrical engineers, London, is interested in a scheme to promote a company for the manufacture of fine china in Canada. The pure clay will be brought into the country exempt, thus decreasing the cost of production in Canada by the duty. The proposed company will likely be located at Credit Forks, Ont., and will also manufacture sewer pipes, tiles, and building bricks.

The business of the Listowel Foundry, Listowel, has been reorganized, and has been taken over by capable men, one having had very wide experience in foundry work. The town has granted certain exemptions to the company, and very soon large additions will be made, in the form of a new building and equipment. At present job work is the chief business of the company, but when the new building is up, they will make the Reid molding machine, having obtained Canadian rights to manufacture.

The Collingwood Shipbuilding Co., Colingwood, Ont., which closed down during January, several conflicting reasons being given for it, have now resumed operations. The company have plenty of work. A large amount of repair work is on hand, new scows are contracted for, and the agreement with the Northern Navigation Company for their new passenger steamer is believed to be practically closed, so that abundance of work is in sight for a long time ahead.

The report presented by the treasurer, C. B. Esdaile, at a meeting of the Council of the Montreal Board of Trade, was highly satisfactory, showing as it did a balance in hand, and a substantial increase in the membership of the board. A report was presented showing what had been done towards increasing Canadian trade with the West Indies. The committee on special trade excursions reported that the Eastern Canadian Passenger Association expressed itself as being opposed to such undertakings unless some special attraction was offered.

The latest report dealing with the proposed Georgian Bay Canal has been received by the Government. Some interesting figures are given in the report which we reproduce. From Fort William to Liverpool, via. New York, is 4,929 miles, while via. the proposed Georgian Bay Canal it would be only 4,123 miles, a saving of 806 miles and the several costs of re shipping which are employed at present. The last survey describes the proposed route of the canal as practically a chain of deep lakes or wide river expansions, so that the construction of the proposed canal would involve the canalization of only 27.5 miles, and the improvement of only 55.5 miles, leaving 357 miles of free navigation. The proposed route would also develop enough power to work industries all along its bank.

Railway Construction.

The C.P.R. are building a large addition to the freight sheds at Owen Sound, and, in addition, the company expect to renovate their wharves and station before the opening of navigation.

One pier for the new G.T.P. bridge at Edmonton is finished at a cost of approximately $52,000. The pier is the second of two built by the G.T.P., said to be the largest concrete piers in the world. There were 4,000 cubic yards of concrete used in the construction.

Construction on the G.T.P., west of Edmonton, will start again in the near future. It is expected that enough ties will be on hand at the commencement to carry the construction gangs through until the arrival of the large supply to be delivered in the spring. Three thousand men will be put to work as soon as enough supplies can be collected.

Building Notes.

The Dominion Government has decided to erect a post office building at Grand Forks, B.C., to cost about $35,000.

Wickson & Gregg, Toronto, will erect a brick factory to cost $16,000.

Loo Gee Wing, a Chinese merchant, will erect at $12,000 warehouse in Vancouver.

A new Presbyterian Church will be erected at Halifax this year at a cost of $20,000. Building will be started at once.

Building permits for January in Vancouver reach the total of $131,800, an increase of $40,000 over those of the same period last year.

F. V. Newell, Chicago, has prepared plans for a large summer hotel, which will be built on Newel Island, about five miles from Kenora, during the summer months.

Addison & Mainprice, printers, Toronto, have applied for a permit for the erection of a $9,000 addition to their factory on Pearl Street.

Companies Incorporated.

Toronto Co-operative Equitable Society, Limited, of Toronto, capitalized at $40,000, "to carry on the business of general supply stores." The provisional directors are Charles Hagyard, accountant; Christopher Wahlroth, insurance official, and R. R. Haddow, traveler.

The Time-Saver Coupler Company, Limited, has been incorporated with head office at Toronto, to manufacture and sell metal hose couplers. The company has a capital stock of $50,000, and the provisional directors are Arthur Wedale, Richard Musgrave and H. E. Johnston, all of Toronto.

The Standard Brass Manufacturing Co., Limited, has been incorporated with head office at Sarnia, to manufacture brass goods. The company is capitalized at $20,000, and the head office will be at Sarnia. The provisional directors of the company are William and Leo Brabant, of Detroit, and F. V. Brabant, Chatham.

Moore & Browne, hardware merchants, Sault Ste. Marie, Ont., have been incorporated under the firm name of Moore & Browne, Limited, as wholesale hardware dealers, with headquarters at the Canadian Soo. The company has a capital stock of $100,000, and intend opening retail branches in the future. The provisional directors are Robert Moore, J. D. H. Browne and Fanny H. Moore, all of Sault Ste. Marie, Ont.

IVER JOHNSON
SAFETY AUTOMATIC REVOLVER

A revolver that can be discharged in any other way than by pulling the trigger is a mechanical absurdity as well as a constant danger.

The things you can do to an Iver Johnson Safety Automatic Revolver without discharging it would keep you busy all day. The one thing you can't do to it is—fire it in any other way whatever than by pulling the trigger.

Handsome in appearance, made in many styles—like a rifle for accuracy—hard-hitting and speedy—but always safe to handle.

We advertise our revolver on a national scale. It is never sold by mail where a dealer will handle it. And we guarantee the goods. Be sure of the owl on the grip and our name on the barrel.

Send for Dealer's Catalogue or order from your jobber.

THE MONTREAL ROLLING MILLS CO.

Edison's Plan for Erecting Concrete Houses.

House Erected in 24 Hours—Bath Tubs Cast in Place—Pipes for Heating and Plumbing Set in Molds—System Only Practicable When Several Houses Are to Be Erected.

The new method of building dwellings of small cost, recently announced by Thomas A. Edison, opens tremendous additional possibilities for the use of concrete. Instead of the old box-like concrete structures with which we are all familiar, it will be possible to have attractive houses at a much lower cost than was possible in the first-mentioned type.

When asked in what particulars his idea was novel, Mr. Edison said:—"There is nothing particularly novel about my plan; it amounts to the same thing as making a very complicated casting in iron, except that the medium is not so fluid. Some one was bound to do it, and I thought that I might as well be the man, that's all."

The method consists in the use of molds, costing $25,000 the set, made of ¾-inch cast iron, planed, nickel-plated, and polished. The different pieces vary in size, some of the interior parts being but two feet square. When in position, the units are held in place by trusses and dowel pins. Into the top of these molds concrete is pumped continuously by compressed air, using two cylinders. The concrete itself acts as a piston, and the two cylinders are alternately filled and emptied. The delivery of the mixture must be continuous, for wherever it is stopped a line appears. To secure this rapid and continuous flow, at the rate of 175 cubic yards per day, a very efficient mixer is required. It has not yet been decided whether a Ransome or a specially designed machine will be used. No rubbing up is necessary, although a few flaws may be present, owing to the difficulty of expelling all air. The escape of air is permitted by the special design of the house, or, when necessary, by a temporary pipe, which may be removed later.

The concrete used is mixed according to the ordinary proportions of one part of cement high in lime, three parts of sand, and five parts of crushed stone. The cement is so finely ground that it readily takes up the requisite quantity of water to make it flow. Another result of the fine grinding, to which the possibility of reproducing minute details is due, is the absolute water-tightness of this material, since there are none of the intergranular openings that are present when coarse ingredients are used. Great strength is assured at the points of stress by wire reinforcements set in the body of the material.

Plumbing Arrangements.

Bath-tubs and similar fixtures will be cast in place. Pipes for the steam heat, conduits for the electric wiring, and the iron tubing through which the lead pipes for the plumbing are to be afterward drawn, are all set in the molds before the cement is run in. The only wood present will be the doors, window sashes and perhaps a few strips to which to attach carpets.

Although any type of architecture can be followed in making the original molds, the first house of this kind to be built will be in the style of Francis I., richly decorated with designs that would be prohibitive because of their cost were they in stone. It will have a cellar and three storeys, with nine rooms. The walls are to be 12, 10 and 6 inches thick in the various parts. The interior will be handsomely ornamented, making no further decoration work necessary after the molds are removed. If it is desired to heighten the inside effect, tinting can be resorted to. In addition to the enrichments, all of these dwellings will have elaborate chimney pieces. The roof

Detail of Edison Concrete House.

imitates tiling and can be painted to suit the owner's taste.

Economical Heating.

Owing to the perfect insulation secured, both to the steam pipes, and to the rooms themselves from the outside cold, but one-quarter the coal ordinarily required is needed to heat these dwellings. By keeping the doors and windows closed, they can be kept correspondingly cool in summer. This manner of building is not economical for putting up single houses, owing to the cost of the initial outlay, although this outlay is in the nature of a permanent investment, as the plant is practically indestructible. On the other hand, for constructing, say a thousand houses, in proximity to each other, it is very suitable. For instance, suppose that it is desired to lay out an industrial village. After the positions of the various buildings are staked out, a large gang of laborers digs the cellars, and the mold for a house is set up, the operation taking about twelve hours. The running of the concrete requires twelve hours more, and after seven days the molds are removed, and the next house is erected.

According to Mr. Edison, the actual cost of a dwelling made according to this method would be one thousand dollars. The wear and tear on the molds and the interest on the outlay, he figures at about fifty dollars a house. This makes the total cost $1,050 for a house that in the quarter-size model in Mr. Edison's laboratory bears every mark of refinement and comfort.

COMPLAINT AGAINST AMERICAN TOOL HANDLES.

The Canadian government commercial agent at Leeds, England, reports a remarkably good opening for supplying the Sheffield firms with wood handles for making all manner of tools. At present this trade is largely supplied from the United States, and the agent reports that the handles received during the last few months have deteriorated so much in both quality and finish that British firms have no option but to buy elsewhere. The American pick handle, for example, meets with the following criticisms: Too broad near the socket; too wide in the shaft; too broad in the grip; many handles of an exceptionally knotty nature, thus spoiling the appearance of the finished article.

NEW WAY TO WRITE LETTERS.

A new idea in the matter of handling correspondence has been invented by a German. It means a great saving in postage, and at the same time eliminates stenographers and writing machines. A business man who desires to send a letter to another, merely talks into a phonograph, and this makes tracings on a card. The address is written on the reverse side and the card mailed under one-cent postage. The recipient puts the card on his own machine, turns on the reproducer and hears the exact words of the man at the other end. No one else can read the card and thus correspondence is made safe. When a card has been read it is filed away just the same as any card would be, and a perpetual record is kept of all correspondence, all of the time in the exact manner which the writer meant his words should be understood. This device is practical and is in use in Germany.

The Mineral Development Company has been incorporated with a capital stock of $25,000, divided into 250 shares of $100 each, to undertake mining operations in Canada and elsewhere, to smelt and prepare metals for the market, and to carry on all operations essential to the objects of the company. The names of R. A. E. Greenshields, K.C.; E. Languedoc, advocate; A. C. Calder, manager; J. Jenkins, student; and C. T. Jette, bailiffe, all of Montreal, appear on the charter. The office of the company will be in Montreal.

A Paint Catechism

By G. B. Heckel.

71. What are scaling and flaking? The premature detachment of paint in small scales or larger flakes. A brittle paint, in the circumstances where a more elastic paint would peel, will scale or flake, according to its degree of brittleness.

72. What is meant by wearing away? The normal wear of paint is both a chemical and a mechanical process. The action of atmospheric oxygen on linseed oil, as already stated, is progressive, from a tough elastic substance to a pulverulent mass. A coating of linseed oil alone disappears in this way. The addition of an inert, opaque pigment, obstructing the penetration of air and light, limits this action to the surface of the paint film. As the surface thus disintegrates, it is slowly and uniformly washed or worn away, exposing continually a fresh surface to the atmospheric attack, until the entire film is thus worn away. Thus while this normal wear is dependent upon external causes, chalking is due to a destructive chemical action between the components of the paint itself.

73. Which is the most desirable mode of disappearance? Naturally by normal wear; and it is one of the chief objects of the well informed paint chemist and paint manufacturer so to compound and prepare his products that they shall not chalk, scale, flake nor peel, but wear away normally from the surface.

74. How is this accomplished? By maintaining a due chemical balance between pigments, oils, driers and other ingredients of the paint, as well as by a careful selection of the single ingredients themselves—care for example, that the iron oxides contain no free sulphuric acid; that the linseed oil is properly ripened and settled and the free fatty acid content not abnormal; that proper allowances be made in composition for umbers with a high manganese content; that the chemical activity of the white lead selected be duly compensated for by some other ingredient, etc.

75. In view of the foregoing facts, is it possible, or, if possible, advisable, to prepare all tints with a white base of fixed composition? By no means. It will be understood, from what has been stated, that practically every tint or shade, if the ideal practice were followed, would require a separate formula and special treatment. But confining himself within rational practical limits, the enlightened paint manufacturer divides his tinting colors into groups with common characteristics and varies his white base and his formulae according to the group. Thus, the well-informed manufacturer may combine the vermilions, blues, para reds, etc., with zinc, oxide, zinc-lead, lithopone, the inert pigments, but he will be very chary of combining any of them with a base containing carbonate of lead.

76. What is the cause of blistering of paint? Heat vaporizing underlying moisture. Only new paint is subject to this evil, unless the heat be excessive, and one paint appears to be as much subject to it as another. Excess of volatile oil prevents it. Incompletely dried lumber would seem to be the chief cause. It may be partially due to a chemical action of light and heat on the oil, segregating glycerine under the blisters, and partially to the expansion of the water in moist spots under the paint. The blisters often disappear in a short time, but the paint is detached from the surface and will scale away when the paint becomes brittle. They are merely a detached covering, not an adherent coating of paint.

(To be Continued.)

Enthusiasm is a quality which any one can make grow by persistent practice.

A Good First Impression

is essential to future success. ELASTILITE VARNISH made a good first impression twelve years ago, because we made the quality then, and still continue to make it to create good first and lasting impressions.

Paint and Oil Markets

MONTREAL.

Montreal, Jan. 31.—General conditions are again somewhat sluggish, and a more active state of things is not anticipated until well into the month of February. Booking has been heavy in paris green this week. On account of the high prices at the start the trade was slow to purchase, but as stocks in the country are now becoming depleted, orders are being received in larger number by the jobbers and manufacturers.

Turpentine—As foreshadowed in our last week's issue, turpentine has met with an advance and quotations have gone up 5c. per gal. The market for this article generally materially strengthens about this time of the year. Stocks in the south become lighter, stormy weather interferes with shipments to the seaboard, and holders are quick to seize upon these conditions to advance prices. We quote: Single barrels, 75c; wood distilled turpentine, pure, 69c.

Linseed Oil—This article still keeps very firm, and there is nothing to note in the market. Quotations are unchanged at: Raw, 1 to 4 barrels, 57c; 5 to 9 barrels, 56c; boiled, 1 to 4 barrels, 60c; 5 to 9, 59c.

Ground White Lead—Despite hopes that ground white lead had touched bottom, a further cut of 25c per 100 gals. has been made. The recent lowering of prices stimulated trade and some fair shipments have been made, but they have not been heavy enough to make the market firm. As one grinder graphically remarked, "it looks as if present quotations were not only on the ground floor, but in the basement." We now quote: Government standard, $6.25. No. 1, $6.

Red Lead—There is veev little demand for red lead this week. Quotations are extremely firm, especially in view of the light sales being made. We quote: Genuine red lead, in casks, $5.75; in 100 lb. kegs, $6; in less quantities at $6.75 per 100 lbs. No. 1 red lead, casks, $5.50; kegs, $5.75, and smaller quantities, $6.50.

Dry White Zinc—The call is almost dead, and it is not thought that there will be much change in this line until the approach of spring. Quotations are nominally: V.M. Red Seal, 7½c; Red Seal, 7c; French V.M., 6c; Lehigh, 5c.

White Zinc Ground in Oil—A few parcels are going out in a desultory way and prices are repeated as follows: Pure, 8½c; No. 1, 7c; No. 2, 5⅝c.

Varnishes—The stiffening in the turpentine market has led dealers to replenish their stock of varnishes and japans. These lines, together with stains, enamels and coach colors, are decidedly improving.

Putty—Building operations seem to be entirely suspended, and the putty market is very slow in consequence. Prices are firm at: Pure linseed oil putty, bulk, in 800 lb. casks, $1.75; in 25 lb. iron drums, $2.05; in 25 lb. tins (3 in a case), $2.15; bladder putty in barrels, $1.95.

TORONTO.

Toronto, Jan. 31.—Business in this section of the country continues to improve, and in consequence travelers of the Toronto jobbers are booking fairly large orders. There is a brisk demand for turpentine, linseed oil and white lead at present, especially in the case of the latter commodity, and as a consequence there has been a considerable flurry on the market, which has changed several times during the week. The reason given for this is the expected appearance shortly of the product of the new corroding plant in Montreal. No. changes in price are recorded on this week's market, and business continues to improve. Rosins have advanced from 10 to 12½ per cent. in the south, but will not affect the Toronto markets to any extent.

Turpentine—The market remains firm and since last week's advances no changes has taken place in quotations. The outcome of cautious buying is still being felt and at the present time there is very little turpentine on the local market. At present there is little indication of prices receding and though small shipments will arrive in a few days sufficient for immediate consumption, it is probable that the demand will be at least as great as the supply for some weeks. We still quote: Single barrels, 75c; 2 to 4 barrels, 74c. Less than barrels, add 5c per gallon.

Linseed Oil—There is a fair demand for linseed oil at present and quotations remain steady. The oil is again firmer in Great Britain and an advance is confidently expected to overtake the Toronto markets in the near future. We still quote: Single barrels 60c; 2 to 3 barrels, 59c; 4 to 9 barrels, 58c. Add 3c to this for boiled oil, f.o.b. Toronto, Hamilton, London, Guelph and Montreal. Terms, net, 30 days.

White Lead—The market has been dull during the week and competition has been so keen that a temporary revision of prices has taken place. Prices for the week are as follows: Genuine white lead, $6.50; No. 1, $6.25.

Red Lead—Since last week prices have remained firm and the demand is beginning to assume spring proportions. The bottom price is felt to have been reached. We quote: Genuine, in 100 lb. kegs, $6; Genuine in 560 lb. casks, at $5.50; No. 1, $5.

Petroleum—an average winter demand exists at present and no change in prices has occurred. Quotations remain: Prime white, 13½; water white, 15, Pratt's astral, 17½c.

Glass and Putty—Glass is moving freely at present at a small increase in quotations and the demand for putty is beginning to assume spring proportions. Prices of putty remain unchanged. Bladders, $1.95 per 100 lbs.; less than barrels, $2.10 per 100 lbs.

Shellac—The market is steady at present with very little demand. Quotations remain stationary though competition is very keen. The following prices prevail: Pure white, in 5 gallon lots, $2.25; pur orange, $2; and No. 1 orange, $1.90.

Varnish—The demand remains steady. Small orders alone are being booked. Quotations are as follows: No. 1 furniture, in barrels, 65c; elastic oak, in barrels, $1.25; light hard oak, in barrels, $1.05.

REGARDING YOUR PAINT STOCK.

This is the time of the year when wise hardware dealers are getting ready for the annual house cleaning season, and are preparing a stock of paints which are in demand from March 1. What plan have you adapted for receiving and displaying this year's stock? Building operations were heavy last year, and, as a direct consequence, a big demand for paints is expected this spring, and you will have to lay in a good stock if you expect to share the profits of the annual spring rush. A few suggestions taken from the paint departments of successful dealers may prove worth reading.

Have the stock arranged by itself, and if you can spare the space the following method for its display may be successfully adapted at little cost. The idea is to construct a pyramid-shaped rack, sloping in towards the top and built with a square base. The size must depend on the quantity of paint stocked but if properly constructed a space of six square feet will prove sufficient for the average store. Build a wooden frame out of common boards to form a series of shelves which will be about the size of the different cans. In this way the gallon pots will be arranged on the floor or bottom shelves, and then the quarts, pints, half pints, etc., may be built up in the shelves prepared for them. Three sides of a pyramid may thus be used and the back section which should be left open will be found convenient for the reception of glass, oils, putty, etc., and other articles connected with this branch of the business.

Last year dealers all over the country complained about the time necessary for goods to arrive at their destinations, delays were common and the prospects are that there will be little or no change this year. Knowing this, it will pay merchants, especially those furthest removed from the different sources of supply, to lay in their stocks as soon as possible. In this way destructive delays will be avoided and your paint trade this year will be on a fair way to prove more of a success than any past year in the history of your business.

ORGANIZE YOUR STAFF.

Prompted by the communications sent out by the Paint Manufacturers' Association of America, one paint dealer in the Western States has organized a class of instruction composed of everyone in his establishment. This class meets once a week and devotes several hours to a thorough discussion of the selling details of the paint business.

Think of the immense possibilities to be obtained through such discussions as will naturally arise through the interchange of ideas. Surely this dealer will get the best there is out of each employe and will fortify himself and his clerks with the strongest selling arguments it is possible to obtain. Give this a little thought. Can't you do the same thing in your own business?

After the preliminary meeting this dealer wrote a letter to everyone connected with his establishment, outlining the plan for these weekly meetings, and putting it up to his people to get busy. It won't take this dealer very long to determine which of his employes are ambitious, interested in his business and worthy of advancement, as against those who are the sluggards and dreamers.

The following is a copy of the letter written by this dealer to his employes:

"A short time since we had an evening meeting which was of considerable benefit. These meetings will be continued at regular intervals. The next one will be ..... It is expected that each one of you will attend these meetings as a part of your work.

"Conditions in the paint business are far from satisfactory. With the trade considerably divided, we handle goods on a smaller average margin of profit than any other line, unless, possibly, groceries. The volume of sales is a comparatively small one when it is remembered that, aside from contractors and painters, each individual and family uses only a very limited amount per year or per five years. It is necessary for us to secure as large an amount of business as possible, to plan new ways for giving customers the most satisfactory service at a reasonable expense to ourselves, and to get all of the business we can. Anything you have to offer in the way of better service to customers, more economical methods of doing business, is worth while to this store organization and so to yourself.

"During the past few weeks we have secured and given you some books about paint which are of value.

"We have gone to considerable trouble to secure paint booklets and pamphlets which are of value to paint men and to paint salesmen. You will not be doing your duty by yourselves or by the selling organization if you do not carefully read, and, so far as possible, learn and understand the subjects treated of in these booklets. A good many people content themselves with what they are going to do to-morrow, next week, next month, or next year. Such people average from failures to ordinarily successful men. The man who goes out and does things to-day and this month, is the man who gets results. We want to do things and do them now.

"Each one of you is requested to leave one or more written questions at my desk each week by or before Friday evening; these questions to touch anything you would like further information about, from the making or buying of paint to the selling or use of it, or to troubles which come up in the paint business. These will be arranged and classified and turned over to the organization by Saturday evening, if possible, so that they may be studied out during the coming week and the answer ready at the first meeting. The time is short in which we can do a heavy business this fall. Let every man bring in all the business he can; think, talk, eat and sleep paint, and see if we cannot make a wonderful record and be ready to spread out a little further another year."

Mistakes and Neglected Opportunities

MATERIALLY REDUCE THE PROFITS OF EVERY BUSINESS

Mistakes are sometimes excusable but there is no reason why you should not handle Paterson's Wire Edged Ready Roofing, Building Papers and Roofing Felts. A consumer who has once used Paterson's "Red Star" "Anchor" and "O.K." Brands won't take any other kind without a lot of coaxing, and that means loss of time and popularity to you.

Something You Ought to Be Selling

The New Century method of washing has succeeded, not because of its ease, speed and simplicity only, but because it gives better results than are possible with any other method.

This machine has a wringer stand too, not a rickety affair, but a convenient, strong, rigid attachment, always in position, never in the way.

New Century Style "B"

The experience is in the machine. You'll hear no complaints of it and have no excuses to make.

They are the best there is.

Dealers, don't load up with experiments, it is a losing game

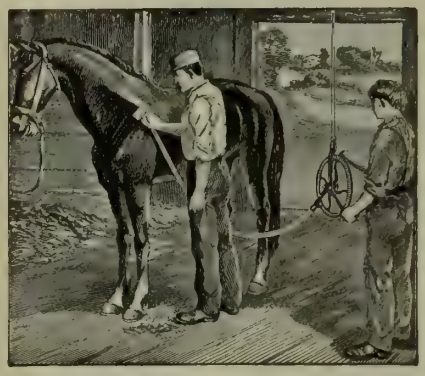
HAND POWER HORSE CLIPPERS

Working with the New Stewart.

"New Stewart"



Wherever horses are used by civilized man the New Stewart Clipping Machine is recognized as the best, and has proved a great success.

It is by far the best seller in the clipping machine line. All steel cut gears, file hard, and every one securely shut in from dust and dirt in a metal case.

Complete with 6½ ft. flexible shaft. Weight, each, boxed, 36 lbs.

"New Stewart."

2 th Century in Use.

"20th Century"

The 20th Century Clipper does 100 times as much work as the old-fashioned hand clipper. Cuts easy and fast and is one of the most perfect clipping machines ever made. Needs no experience to operate.

Complete with 4½ ft. flexible shaft. Weight, each, boxed, 20 lbs.

"2 th Century."

1902 Chicago in Use.

"1902 Chicago"

The 1902 Chicago Clipper will clip a horse in thirty minutes, and is considered one of the best clipping machines in the world. Operated by right or left hand. It is simple, strong and durable, and is light-running and noiseless. All parts are hardened tool steel.

Complete with 6½ ft. flexible shaft. Weight, each, boxed, 56 lbs.

"1902 Chicago."

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines These enquiries come from Wholesalers, Manufacturers and Retail Dealers, who usually intimate they have ooked through Hardware and Metal, but cannot find any firm advertising the line in question. In the majority of cases these firms are anxious to secure the information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay them to advertise in larger space.

THAT STUFFY ROOM

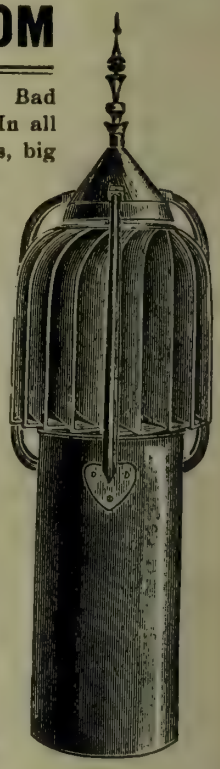
is more deadly than disease itself. Bad air is the curse of crowded living. In all public places, such as asylums, clubs, big offices, schools and theatres, **PURE AIR CAN BE OBTAINED ONLY BY OUR SYSTEM OF VENTILATION.**

It has stood the tests of scientific experts.

It is in use in the finest buildings in Canada.

Its price is reasonable and its benefits lasting.

Testimony



Montreal, June 7th, 1901

Messrs J. W. Harris Co., Limited
Montreal

Dear Sirs,

I have been using your "AEOLIAN" Ventilators on several houses in this city with the best results. The tenants of these houses declared that your Ventilators are of great advantage to them. I also installed two (2) 18" on my stable and I can say that your Ventilator cannot be surpassed by any to take out the sweating or the bad smell in any room.

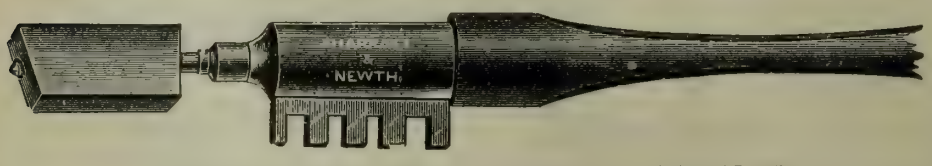
A Grip on Your Good-Will

If you will read through one copy of Plumber and Steamfitter of Canada, you will decide that you could not afford to be without it, if the subscription price were $5.00 per year instead of 50c. per year, which is the rate to Hardware and Metal subscribers.

The fact that we hold practically all of our subscribers, shows the strong hold we have on their good will.

Our editors and correspondents are on the look out for every job that is worth describing and illustrating. We show our readers the best work that is being done by Plumbers and Steamfitters in the various provinces of the Dominion; tell them of the difficulties that have been encountered, and explain how they have been overcome.

Subscription price 50c. per year to subscribers of Hardware and Metal.



Is not this paper worth one cent per week to you?

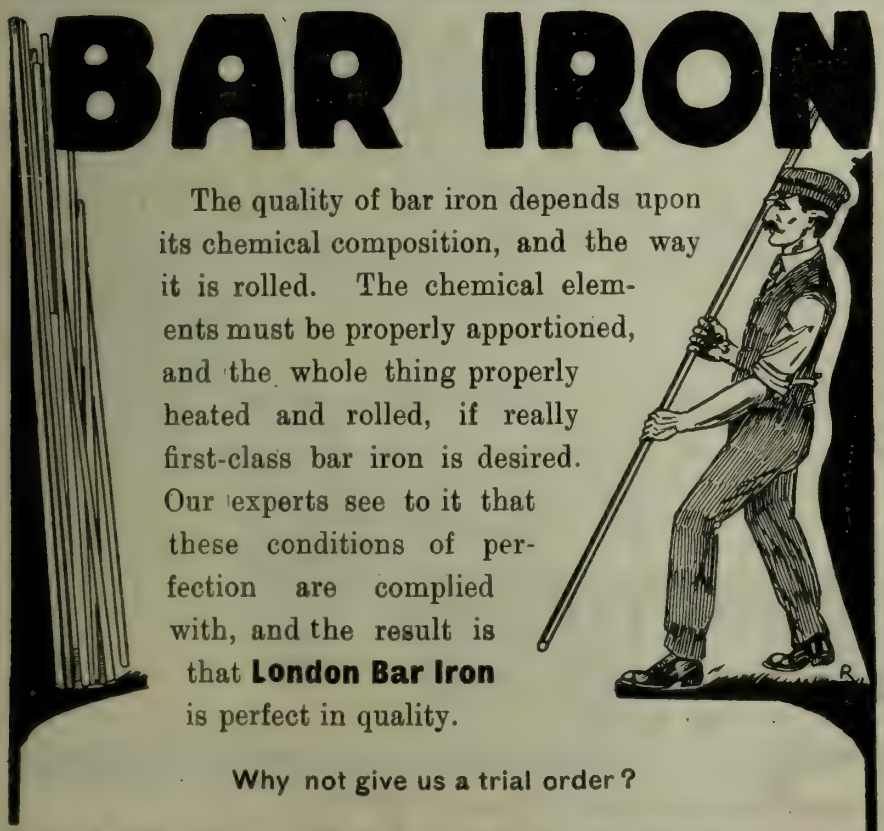
Contractors to H. M. Government and the principal English Sheet and Plate Glass Works

Are you interested in any of the lines that are advertised?
A Post Card will bring you price list and full information.
Don't forget to mention Hardware and Metal.



Why not sell a fence that will advertise your business? Ideal Fence makes people stop and take notice, and it stands inspection.

Ideal is the standard Farm and Railroad Fence of Canada. Big, strong wires—all No. 9,—heavily galvanized and firmly locked. See how the patent lock grips uprights and horizontals together at every crossing. No chance for slips. Wires are gripped on five bearing points.

Good margin in Ideal. We want one live man in every locality. Write for catalog and Dealer's Terms.

The McGregor Banwell Fence Co., Ltd., Dept. O, Walkerville, Ont.
The Ideal Fence Co., Ltd., Dept. O, Winnipeg, Man.

BAR IRON

The quality of bar iron depends upon its chemical composition, and the way it is rolled. The chemical elements must be properly apportioned, and the whole thing properly heated and rolled, if really first-class bar iron is desired. Our experts see to it that these conditions of perfection are complied with, and the result is that **London Bar Iron** is perfect in quality.

Why not give us a trial order?

PROTECTION and SECURITY

For the Dealer Protection, For the Purchaser Security.

This is our 1908 program. Our Dealers in 1907 secured their choice of the Largest and Best Business. We do not worry about where they stand, but we fear that some Good Merchants do not know what great assistance we can and do give our friends. We are the Originators of the Protection Plan. Because it is a success, we of course have many imitators, but our Goods and Methods cannot be duplicated.

There will be much farm building done in 1908, by present indications. Get in line to look after your share. The best and surest way is to get in touch with us. A post card will do it.

"Sure-Grip" Shingles and "Galt" Corrugated Sheets combined with Galt Salesmen and Galt Methods will work wonders.

After the Inventory, What?

"Hammernail" in Hardware, New York, makes some valuable suggestions regarding dead stock—How it accumulates and how to dispose of it.

Many facts, besides the amount of merchandise on hand are brought to light by the annual inventory. The inventory of the stock is necessary before the books can be balanced, and when this has been done the amount of profit on the year's business is shown. But the inventory is of more value than simply to be the means of revealing the profit of the year's business. By a close study of its pages the hardwareman will find—perhaps to his surprise—that he has an overstock of some goods. It will not be a difficult thing to ascertain just what goods are not moving; to find out exactly just what and how much dead stock there is in the store. For this purpose it will pay well to compare the stock sheets of one, two and three years back.

So-called dead stock is brought to light by the inventory, but there are many merchants who will not admit that their stores contain any but the most salable stock. By "dead stock" is meant any class of merchandise that does not move in say eighteen months' time. Some good retail merchants, in fact most of our modern big departmental store men, would class as dead stock that stock which did not move within ten months. Some would put it three months. But the very nature of the hardware business is such that it would hardly be possible to conduct a general hardware trade and move all the stock in ten months' time. Dead stock in the hardware store consists of anything that does not find a ready sale.

How Dead Stock Accumulates.

The taking of the inventory shows that there is dead stock in the store. The goods were not thought to be "dead" when they were bought. It will often be found that once these were among the best selling articles in the store. As an example, I know of a hardwareman who had over five dozen clothes pounders in stock. A few years ago he was probably selling that many a month. But gradually the machine took the place of hand work in washing clothes. The clothes pounders ceased to sell, the washing machines having more than taken their place. Those clothes pounders had become dead stock because there was no more market for them. And they came to be so in the natural course of the business and possibly because the dealer didn't look far enough ahead.

Sometimes it happens that good marketable merchandise becomes, for one merchant at least, dead stock, because his sales may be cut off, although the goods are not obsolete. This has often happened to a hardwareman in the case of mill trade. A certain kind of file is in demand. One particular mill uses this file constantly. The dealer puts in a larger order than usual. Then the purchasing agent at the mill is changed or a new foreman comes with new ideas. The mill ceases to buy that kind of a file. The goods find no other sale and they become dead stock. But in most cases dead stock can be traced back to careless or reckless buying or poor store management, although in spite of the most careful attention it will accumulate.

Eliminate "Dead Stock."

Having come to know that there are unsalable or slow-selling goods in the store, the wise hardwareman will at once endeavor to move this merchandise. One of the best ways to reduce this stock is first to draw off a separate list of these goods. Another excellent plan is to get all these goods together in one place in the store. Mark down the price on obsolete goods and move them, if possible. It has been said that for everything there is a market if only one can find it. It is also true that a merchant can not infrequently create a market for slow-selling goods by reducing prices and by advertising. In a case of overstock of a good salable article, for which the local demand might have become very limited or ceased to exist, as in the case of the files above, the best plan would be to take a loss and sell the goods, either through the regular jobber or direct to a hardware dealer, in a town or city where such goods are wanted. But in any case it's far better to take a loss on such goods and get them into something than to carry them along year after year on the inventory.

It probably isn't true that through the country generally there are big stocks in the hands of the hardware dealers. In many classes of hardware the jobber's stocks are remarkably low. Still it probably is a fact that there are very few hardware dealers who would not be just as well pleased to have still less in merchandise and more in money this January of 1908. Some comfort can always be had in the thought that if the goods were not in stock they would need to be purchased, and being in the store they will not have to be bought. However, it is always true that careful buying will bring good returns on the effort put forth.

See That Profit is Secured.

A careful consideration of the past year's business will bring to light the fact that much trade has been done with a very small amount of profit. The study of other results, as brought out by the inventory, probably proves that although 1907 was one of the banner years as to volume of trade, still the profit has not been in proportion to the business done. This then proves that it is profit made and not business done that brings the best results.

All this study of the inventory brings to the hardwareman some pointed conclusions for 1908 business.

1.—Buy more carefully.
2.—Watch stock closely.
3.—Try less for volume—more for profit.
4.—Push goods that pay best profits.
5.—Close out slow-moving lines.
6.—Better to buy more frequently than to overbuy.
7.—Reduce stock, inventory money next year.

That long, tedious, mean job of "taking account of stock" will have proved to be the best job of all, if the merchant is wise enough to study the results and act on conclusions drawn therefrom.

NEW CEMENT PLANT IN OPERATION.

The Lakefield Portland Cement Company have started shipping operations from their new plant at Pointe aux Trembles, Que., this week. The output of the factory is 2,000 barrels per day, which is to be increased shortly to 3,000 barrels. The limestone, which contains 2 per cent. of clay, thus giving it a correct chemical analysis for cement making, is quarried nearby, and conveyed to large gyratory crushers in steel dump cars. From the crushers the material is passed along through different rotating mills and furnaces progressively, and is not handled again until it passes into the receiving bins as cement.

The grinding is accomplished in two sets of mills, the Krupp Ball mills, and the Bonnot Ball mills, and the substance is reduced to such fineness that 25 per cent. of it will pass through a sieve having 10,000 meshes to the inch. Water screw conveyors carry the material to the roasting kilns, which are immense cylinders 110 feet by 8 feet in diameter. The calcining is done by means of pulverized coal, the degree of heat required being about 3,000 degrees F. The clinker thus formed passes through a natural draught cooling process, is then re-ground into Portland cement, and carried by elevators and conveyors to the store bins. All these grinding mills are operated by separate Canadian General Electric motors, and the power used is between 2,500 and 3,000 h.p., supplied by the Montreal Light, Heat & Power Co., at a pressure of 10,000 volts. This pressure is then reduced to proper voltage for the various motors. The lighting is accomplished by 50 Jandus arc lamps, and by about 700 incandescent ones. One great feature of the plant is that all the machinery, including the shafting bearings, are on concrete foundations. The area of ground under roof is some 140,000 square feet.

The formal opening of the works was celebrated by a luncheon given by the company at Pointe aux Trembles to a large number of Montreal business men, and to the members of the Canadian Society of Civil Engineers, who are holding their convention in Montreal.

Retail Hardware Association News

Official news of the Ontario and Western Canada Associations will be published in this department. All correspondence regarding Association matters should be sent to the secretaries. If for publication send to the Editor of Hardware and Metal, Toronto.

THE COMING CONVENTION.

Place—Toronto.
Date—Feb. 12 and 13.
Headquarters—Palmer House.
Hotel Rates—$2 per day.
Hall—Palmer House Building.
Exhibits—Palmer House Sample Rooms.
Entertainments—Some surprises in store for delegates.
Executive Meets—Feb. 12, 10 a.m.
Convention Opens—Feb. 12, 1.30 p.m.
Convention Closes—Feb. 13, 5 p.m.
Question Box—This will be a feature at every session of the convention. Come prepared to take notes and participate in the discussion.
Railway Fares—Single fare on all railways, to Toronto, Feb. 11 and 12, returning up to Saturday, Feb. 15.
Other Attractions—Horse Breeders' Exhibition and Mendelssohn Choir Concerts.

CONVENTION PROGRAMME.

The programme for the third annual convention of the Ontario Association will be about as follows:

Wednesday, February 12, 10 a.m.—Meeting of the Executive. 1 p.m.—Enrollment of members, payment of dues, etc. (About two dozen members were enrolled at last year's convention. Let's beat this record this year.) 1.30 p.m.—Convention called to order by President. President's address, Secretary's report, Treasurer's report, amendment to constitution, appointment of committees on resolutions, nominations, legislation, grievance, etc., general business, question box discussion on general trade matters. Wednesday evening—Complimentary dinner.

Thursday, February 13, 9.30 a.m.—Report of committees, general business, question box discussion on matters relating to the business end of a hardware store. 2 p.m.—Photo of delegates, election of officers, question box discussion on matters relating to the hardware store, such as care and display of stock, fixtures, windows, etc. Adjournment.

VISITOR FROM MICHIGAN.

Porter A. Wright, Holly, Mich., vice-president of the Michigan Retail Hardware Association, will attend the convention in Toronto next week as a fraternal delegate in place of Secretary A. J. Scott, of the same organization. Mr. Wright will preside over the "Question Box," which has been a successful feature of the Michigan conventions in past years and, in addition, will give a brief talk on "What the Michigan Association has done for the retail hardware men of that State." Mr. Wright's presence will be greatly appreciated by the officers and delegates.

Another visitor who may be on hand is John Holley Bradish, Batavia, N.Y., vice-president of the New York State Retail Hardware Association, and manager of a trade exhibition to be given under the auspices of that body during its sixth annual convention to be held at Buffalo on Feb. 18 to 22, the week following the convention in Toronto.

JOBBER ENDORSES ORGANIZATION

T. James Fernley, secretary-treasurer of the National Wholesale Hardware Association, in a recent address upon "What Advantages Can be Obtained Through Co-operation in Trade?" referred to the extent of association work with nearly every branch of trade having its meetings and conventions, where its interests are discussed. In the nineteenth century the prevailing motto was "competition is the life of trade." In the twentieth century the motto has been changed to "co-operation is the life of trade."

It is up to the manufacturer to protect the quality of his goods through co-operation and proper protection of the distributors of his product, instead of relying upon price as the means of affording him a market.

It is the duty of the jobber to ask the manufacturer to protect him in the proper marketing of his goods through liberal inducements and an inflexible quality, which is always necessary for the standardization of good products.

In these days of strenuous competition there are many hot questions that keep associations active. It is the province of associations to keep as nearly as possible within the bounds of questions easily solved. There is the question of cost of doing business, which is of vital importance to both jobbers and manufacturers. He said the hardware jobber had found that 15 per cent. was the average cost of doing business, while the retailers placed 20 per cent. as their cost.

The educational influence of associations is primarily essential to their proper conduct and maintenance. One of the most important functions of association work is the elimination as far as possible of the abuses that have crept into the trade. Before the advent of associations the manufacturer was placed at a disadvantage when he desired to find out whether a certain policy he desired to pursue was proper. He had to canvass the entire country and get a majority opinion from the people he was dealing with. Now he simply consults with the officers of the associations representing the trade or trades in which he is engaged as a producer of goods.

There is also a moral obligation resting upon the shoulders of the jobbers. The manufacturer who stands by the jobber is entitled to support. Don't pass resolutions and end it there. What they want is orders, not resolutions and sympathy.

Referring to the question of cash discount, Mr. Fernley stated that he had sent out a large number of letters asking manufacturers to allow 2 per cent. 10 days' discount and had received so far forty-five replies acquiescing in his request. He had also received many complaints that jobbers were taking the discount after the time limit had expired. He said the jobber taking the discount should see to it that he was within the time limit or cease taking the discount. He advised every manufacturer allowing such discount to send back dilatory cheques and refuse to allow the per cent. after the expiration of the ten days. It is the duty of the association of manufacturers to see to it that the discount rule is lived up to and back up its members in their demands for a vigorous enforcement of the rule.

SECRETARY'S FINANCIAL REPORT.

The following statement shows the money received by the secretary from Jan. 1 to Dec. 31, 1907:

Received on membership fees	$414.
Received by collection department	50.
Total receipts	$464.
Paid over to treasurer	$464.

TREASURER'S REPORT.

Receipts—

To cash balance, Dec. 31, 1906	$ 59.30
To membership fees received	414.00
To collection department fees	50.00
	$523.30

Disbursements—

By expenses, secretary's office	$103.70
By executive traveling expenses	110.85
By job printing	104.49
By organizer's expenses	68.00
By honorarium to secretary	50.00
By hall rent	8.00
By legal expenses	5.00
	$450.04
Cash on hand, Dec. 31, 1907	73.26
	$523.30

STANDING OF ASSOCIATION.

Assets—

To cash on hand, Dec. 31, 1907	$73.26
To saleable stock on hand	30.00
	$103.26

Liabilities—
None.

Audited and found correct, Jan. 30, 1908.

J. W. PEACOCK,
C. F. MOOREHOUSE,
Auditors.

COMPLIMENTARY DINNER.

Invitations have been sent to all members of the Ontario association by H. S. Howland Sons & Co., Limited, Toronto, to attend a complimentary dinner to be tendered the officers and members of the association by that firm at

McConkey's Restaurant, at 7.30 p.m., Wednesday, Feb. 12, the first evening of the convention.

In 1906 and 1907 Col. J. B. MacLean, of the MacLean Publishing Company, entertained the delegates but this year H. S. Howland Sons and Company expressed a desire to do the honors.

As on previous occasions the dinner will be an informal one, ordinary business dress being the rule, the aim being to make the occasion one where hardwaremen can get together in good fellowship, forgetting all trade differences in a common desire to develop a feeling of brotherhood without which no trade or organization can hope to succeed.

AMENDMENTS TO CONSTITUTION.

Notice has been given that at the annual meeting in February motion will be made that the constitution be amended, providing for the holding of the annual convention at some date between January 1 and March 15, at the call of the executive committee, rather than on the second Tuesday in March, as the constitution now provides.

Notice has also been given that motion will be made amending the constitution providing for amendments being made at the annual meeting by a two-thirds vote without the four weeks' notice now called for by the constitution.

ARGUMENTS AGAINST PARCELS POST.

J. Kornely, Milwaukee, president of the Wisconsin Retail Hardware Association, has written a letter to the U. S. Postmaster-General Meyer, in which he presents a number of arguments against that official's proposed parcels post legislation. We give the following extracts from Mr. Kornely's communication :

The object that you allege to attain is the good of the farmers. As the farmer is the consumer, the proposition is a fruitless one, because you make the farmer pay directly on the goods bought and indirectly by taxes to sustain the carrier business.

If the parcels post would be regulated according to distance, so that the farmer would pay proportionately the same cost of carrying from the village to his farm that he would have to pay from New York to his farm in Wisconsin there would be nothing dishonest or foolish about the transaction, and yet it would be unbusinesslike. The queer part of the transaction is the charging of the same rates for 1 mile and 4,000 miles, which is a violation of every business principle, and if a man were to go into the freight business on that plan he would be stamped as a swindler or a fool.

The carrying of freight is purely a commercial enterprise differing in principle from the carrying of communications, news and intelligence among the people and between our people and foreign countries, in the form of mail. Once the territory of legitimate commerce is invaded the liberty and independence of the citizen is trespassed upon, and the liberty and independence of the country proportionately destroyed.

Another feature would be the confusion in prices, the farmer receiving his goods at home paying more than his neighbor who purchased in town. Besides, it seems, there must be the additional expense of packing to be charged against the consumer. As neighbors exchange gossip over teacups the variable prices of their local dealer would be gone into and a resolution easily voted to give their trade to some concern a thousand miles away to spite the local dealer.

Another problem would be the disadvantage of selecting the kind of goods and the prices of the goods desired, which could not be done unless the local dealer got out a large catalogue of everything that he carried and furnished it to the farmer. In this way the farmers would obtain a library of confused prices and descriptions, which in time would bring them disappointment and disgust, and would greatly add to the expense of the local dealer.

If the Post Office Department desires to give relief to the entire people it should reduce the rate of postage on sealed matter to one cent per ounce. There is no more trouble in handling a sealed letter than an unsealed one and it weighs less on the average. Therefore, let us have a one-cent rate.

If trade is left in its natural channels, unhampered in localities by law, and not subsidized in other places by misappropriated taxes upon the people, the small trader will have an equal chance with catalogue houses to make an honest living; otherwise, the money will be drained from the small localities to the catalogue house, and the locality, as such, becomes impoverished and our peasantry degenerate. Any one who has studied the question of absentee landlordism will readily see the national calamity to which the proposition leads. The destruction of the small trader and the country village is worse, perhaps, than race suicide. After his picture of sweet Auburn, in the "Deserted Village," Goldsmith puts the argument in its strongest form :

Ill fares the land to hastening ills a prey,
Where wealth accumulates and men decay;
Princes and lords may flourish or may fade,
A breath can make them, as a breath has made;
But a bold peasantry, their country's pride,
When once destroyed, can never be supplied.

ADOPT THE CASH SYSTEM.

A recent newspaper dispatch from Winnipeg says: "It would almost look as though the farmers in the country having run up bills with the country stores, when they do get some money, instead of paying off their debts, send it in to Eaton's and order their goods by mail. If this is the case the country store keepers must be having a bad time and should remodel their businesses, refusing to give so much credit and getting down more to a cash basis.

To show how some stores in Winnipeg are at present doing business we quote an incident that happened two days ago. An article was examined and the price was quoted $15. The customer said, "I am afraid that is too much, I could not give more than $12," whereupon the salesman said, "It is yours." Now, other years this could not possibly have happened. It has always been the other way about—more customers than goods."

The above is interesting reading and suggests several comments. As to the giving of credit it is certain that many Western hardwaremen have taken the advice so often given in these columns and have established the cash system, insisting that customers pay up their old accounts before new goods can be procured. If all had done this, however, the amount of money sent to the mail order houses would have been much less than it was. No merchant with backbone will continue to give credit to customers who send their cash to the catalogue houses.

Another phase of the question is the fact that a correspondent reports that the big store in question did a large trade in very cheap stuff, but fell below last year's record on good lines and discharged 800 employes the day after Christmas, while other firms are straining every nerve to keep as many employed as possible.

NO RAILWAY CERTIFICATES.

As several members have enquired regarding railway rates to next week's convention, it may be repeated that single fare rates are obtainable on all railways coming to Toronto on Feb. 11 or 12 and returning up to Feb. 15. No certificates will be required.

NEW MEMBERS ENROLLED.

An encouraging enrollment of new members has been made during the past week, Eastern Ontario being well represented. The towns represented include Kingston, Prescott, Sunderland, Inwood, Orangeville, Exeter, Elmira and Hanover.

Seventeen new firms have also forwarded orders for the set of collection forms supplied to members for the sum of $1. This department of the association work has been a great success.

At last year's convention about thirty firms enrolled and from reports of those likely to attend there will not only be a record attendance but a record enrollment of new members at the convention.

THE QUESTION BOX.

Additional suggestions of topics for discussion in the "Question Box" at next week's convention include :

"How can ladies be attracted to the hardware store ?"

"What is the best method of keeping track of goods in stock ?"

Progressive Retailing

Suggestive Plans for the Keeping of a Store Up to date—How the Doctrine of "Show Me" can be applied to advantage.

A quarter of a century ago hardware establishments were more the workshops of mechanics than the modern and roomy places of business which are designated by that name to-day. Even the young boys can remember changes and improvements in the business methods of the successful hardware merchant that have taken place during the last few years. The modern store is fitted with hardwood floors, roomy, as well as showy silent salesmen, is well lighted and contains a stock which varies more than any other business devoted to the display of one branch of trade, and in the up-to-date store, stock is divided into departments and is kept by itself.

Where such a large variance is in evidence, it is important that the stock should be kept in its own department and in no other store should the point be more thoroughly attended to than in the hardware business.

Methods of Successful Firms.

The growth of many firms during the past few years speaks well of the methods and management in the retail stores of to-day. The methods in use by these firms vary, but generally can be described in the words of a Toronto hardwareman, who, when asked to account for his success, replied in the following sentence: "We pay good wages, we give no credit, and we advertise intelligently." A hard line to follow, some say, but it is generally acceded that the man who can earn a substantial income is of far more worth to the business house than an employe who only works because he must have money for his pleasure and excesses, and who is content to remain permanently a subordinate. To do business on a strictly cash basis is also just as easy, for when a firm starts this method it is at once evident that the stock is newer and of better quality than can possibly be handled by the merchant who buys and sells on a credit basis.

Successful Advertising.

There are several ways in which a retailer may advertise and some merchants have adopted a system which embraces several styles of advertising that cannot fail to bear results. A few methods adopted by these firms are: Through the medium of the daily papers, by carefully prepared circular letters, and by attractive windows and well arranged stocks. Each of these methods is good and though the first two methods are advantageous, the third is absolutely necessary if a firm expects any kind of success and by the up-to-date business man it is carried out with the greatest care. The dressing of windows and show cases is generally attended to by the chief clerk or by a special man.

Place Confidence in Subordinates.

This is another important point from the standpoint of the merchant. Make few promises to clerks, but at all costs keep them, for confidence thus abused cannot fail to fall back on the head of the department in the long run and nothing that can be done will bring back the confidence thus lost. Treat subordinates like animals and they will work while you have your eyes on them, but treat them with respect and place enough confidence in them to make each feel his position, and in the vast majority of cases it will be found that your subordinates will work with their sleeves rolled up in your interests, and get along quite as well in your absence as when you are present.

If the proprietor is as he should be—the real business head of the firm—he will surround himself with subordinates who are "live" enough to have the firm's interests at heart, and the clerks can show him in quick order whether their thoughts are on his business or whether they are thinking of last night's dissipation. The public will soon recognize if the firm's employes are trying to get along and be up-to-date or if they are cheap, saucy weaklings who draw poor pay and don't earn what they get and in the latter case will be tempted to go to some firm where nothing is a bother and where they are courteously received by the clerks.

Do Not Misplace Ability.

Misplaced ability is common and though by training a man can fit himself for his work, it is important that work should "fit" him, as when once started, well, quitters are not popular, and if a man would be a success he must have ability and in addition he must be thoroughly interested in his work and in the interests of his employer. In this respect the proprietor or the manager of a firm can show his ability by carefully picking out subordinates from the lists of candidates who constantly seek situations with their firm. A man must necessarily know the methods of bookkeeping before he can be trusted with the firm's accounts and so must each employe become familiar with his work before he is given a more responsible position. The manager of a large firm in Toronto says that only one out of ten of the young men he takes on at his store "make good." By this he does not mean that they cannot hold down the subordinate positions, but that they do not give their work the thought and industry necessary to show him their worth. This same man is one of the biggest employers in Ontario and his methods of dealing with the men are much appreciated. A man is seldom discharged, in fact the foremen have no power to discharge the men, but if they do not do good work they are laid off for a time varying from a day to one week, and if this does not do they are again laid off, but never discharged. This method works well and the men appreciate the fact that their employer is looking after their interests and consequently work their best. Another firm is very careful of the physical needs of all employes, hence if a man's eyes are poor he works beside a large window, or near a light, and if sick, the firm's doctor waits on him free of charge. The best firms employ many such methods for the care of employes, and we do not know of a case where they receive careful consideration which does not bear results.

Prolonged Service an Asset.

Did you ever consider that the longer a man remains in your employ, provided he knows his business, the more valuable he becomes. In speaking of this, we refer to a man who has worked in the one department of a hardware establishment for a period of twenty-five years. This man is thoroughly competent and understands the goods in his charge better—his employer admits it—than the man who owns the business. In speaking of this same man the employer refers to the fact that his salary is an investment made by the firm which pays handsome returns. It is true that men of this calibre are scarce, but when a firm gets the right man for the right place he should be retained as long as possible, for if lost he can only be replaced after a considerable time, as the practical man has to undergo a training of many years before he can be styled first-class.

To Display Stock.

This is a business matter which should be given careful attention, especially in a hardware store, where the stock includes so many lines. The Bennett box system has been universally adopted of late years and the method for displaying samples and stock is recognized as the best on the market. Cutlery can be exhibited best from a glass show case, and electric and gas fixtures, where handled, can be tastily arranged on the ceiling and walls in a portion of the shop devoted to their display. During holiday seasons an excellent plan is to place seasonable wares on tables and shelves where they may be examined by prospective buyers in quest of gifts. The model hardware store also has a paint department, and lines of stoves and sporting goods, which occupy prominent positions in the store, each in the particular season in which they are demanded by the public. A mistake frequently made by the hardwareman is to keep his stoves in a prominent position during the summer months and in letting his paint department have space which might be used to advantage during the cold weather. The hardware stocks do not all sell in one season and as a line becomes seasonable place it in a suggestive position in the store. The space

for this may be arranged by storing unseasonable wares.

The Art of Stock Buying.

Nearly every merchant or firm's buyer has methods of his own for the purchase of new stock, and many methods, according to their inventors, have been found to work with satisfactory results. A few years ago, if a traveler offered goods at say $1 a dozen, he would probably get an order for a dozen, but if he offered the article at 95c a dozen by the gross, he was in many cases enabled to sell a whole gross. This method has, however, gone out of date, as by buying an article by the dozen, lines are quickly cleaned out and the buyer has funds for the good things which occasionally come his way.

Selling Off Slow Stock.

As every business man knows, stock will accumulate, and though this is not so important from the standpoint of the hardwareman, it is true to a certain extent, for the reason that articles such as door knobs are constantly being improved. Hence, it is necessary to sometimes place on sale such articles as get damaged or are in danger of getting old-fashioned, and clearing out the stocks to admit newer goods.

Outside Appearance.

Where a man has a comfortable, well-stocked store he is not likely to forget the appearance of his place of business on the outside, but sometimes it is neglected. Brass name plates are very common, and where used present a slovenly appearance if not carefully polished. In the same sense the show windows may cause a poor impression if they are not carefully cleaned before they are dressed.

The poor business man remarks that he does not own the building, so will not have it painted, and he sells paint, expects people to come to him to buy an article which he himself scorns to use. His method is wrong and we think his kind is scarce, for the appearance of a place of business is as important from the outside as it is in the main section of the store, and if the windows and plates are dirty and the paint is peeling off the arches an unfavorable impression is sure to result.

The man who takes the position of being "from Missouri," and rewards his clerks for "showing him," will surround himself in a short time with efficient clerks to "show" the people, and up-to-date stocks to sell them, and the business increase which cannot fail to result, will be his reward.

NEW PICTON FIRM.

Milton Adams, who for the past year has been the representative of Lewis Bros., Montreal, in Western Ontario, has entered into partnership with A. E. Vandusen of Picton, and purchased the tinware, plumbing and hardware business so long conducted by I. N. Waite, in Picton.

Mr. Adams is a native of Picton. As a boy he entered the employ of H. Welbanks, a former hardware merchant of that town, where he remained for two years. For the next fourteen he was in the employ of R. Hadden, of Picton, passing through all the departments of the business from errand boy to salesman and bookkeeper. In 1906 he accepted a situation as head salesman in the hardware store of A. W. Moore, St. Catharines, where he remained for a few months until he resigned and accepted a position on the road for Lewis Bros. Mr. Adams has for a number of years been connected with the Canadian militia, and at the present time is senior captain of the 16th Prince Edward Regiment. He holds field officer's and equitation certificates, and will shortly be promoted to major in this corps.

A. E. Vandusen is a young man who has been a lifelong resident of Prince Edward County, having spent all his life on a farm a few miles out of Picton. For a few years past he has been successfully engaged in the manufacture of motor boats and gasoline launches.

MILTON ADAMS, PICTON.

Another of Lewis Bros.' Travelers Who Has Gone Into the Retail Business.

WHO READS TRADE NEWSPAPERS?

How to Keep in Touch With Progress in Various Departments of Business.

If you were to be appointed to a responsible position in railroad administration or in a manufacturing industry, where would you go for information about the latest equipment and methods? You would turn immediately to the trade press publications dealing with the transportation or manufacturing industry concerned. In this great country of invention and development nothing is fixed. Equipments and materials of to-day are constantly being replaced by those of more efficiency and economy. In one of the great steel plants in Pittsburg new installation and machinery costing hundreds of thousands of dollars was replaced in less than two years by even more expensive equipment, but which produced a better product at less expense. Whatever one may know of the mechanics of any business or industry of one year ago, he could not be depended upon to undertake any important enterprise on such a knowledge.

In business life to-day we find two methods of keeping in touch with progress. There are business and trade organizations, local and national, which deal with many of the general problems for advancement. The other factor is the trade press. This class of publications has grown in recent years from meagre trade reports to the largest periodicals of the world, giving the latest scientific and trade news and amounting to practically complete showing of equipment for the industries concerned through advertising pages.

After a tour through the United States, Sir Alfred Harmsworth said of the American newspapers: "Apparently sin is news, but what of the great industries and enterprises of your country?" He could find his answer in the trade press publications which now ably represent every commercial and industrial interest.

The second annual convention of the National Federation of Trade Press Associations has just taken place. There are in all over two hundred and fifty publications which deal with the professional, transportation, manufacturing, commercial and financial interests of the United States, and about fifty in Canada. These constitute the text-books from the first grade to the universities of the great business life of this country.

Who reads these trade press publications? Those who are foremost in the management of the railroads, the cotton and woolen mills, iron and steel industries, electrical and mechanical shops the mammoth wholesale and retail food products and dry goods establishments, and all banking institutions. They must have the latest news of, they must know what is being done and what the world affords. The heads of all departments will fail to meet the responsibilities placed upon them if they, too, are not well posted and aggressive in their methods. The ambitious workman of to-day will be the proprietor of tomorrow. He, too, must look to his text books—the trade press publications—for the broad knowledge of conditions outside of his own environment.

Among the questions which are frequently asked applicants for positions as teachers are these: Are you taking any educational journals? If so, how many? In some instances a certain number of points are given for favorable answers to these questions. Similar questions apply equally well as an indication of the enterprise and efficiency of workmen, foremen, superintendents, executive officers, and the heads of firms, in printing as in all other lines.

The United States could not have reached the high degree of development in medicine, architecture, music, business, manufacturing and transportation without the leadership of the trade press. With the certainty of still further specialization in all lines, the trade press will be of correspondingly greater importance. Whatever the developments in any line, there is a similar evolution in printing. More than any other artisan, the printer must keep in touch with progress through his trade publications because printing is the dynamic radiating force of the social, educational and business life of to-day.

Some men resemble goats, they can't help butting in.

Sporting Goods Department

Some Practical Suggestions regarding this Money-making End of the Retail Hardware Business.

Every retail merchant knows, or should know, the value of taking time by the forelock in the selection and ordering of his goods. The man who is a victim to the great fault of procrastination, and puts off his preparations for a certain season's special trade with the lame excuse that there is plenty of time "later on," is the man who gets woefully left when that season does arrive. As a financier plans out his strategic moves on the great monetary chess board long before he actually starts the game, so a retailer should have his ideas mapped out to meet the different phases of his trade long before those phases arrive. The ordering of stock is not to be lightly, or quickly done, if successful trading is desired. The merchant must first of all decide on what particular lines to carry, and whether it would be wise to push any article which he may not have previously stocked, but which the trend of popular inclination seems now to warrant attention. Branching out into fresh directions is wise policy, but one full of pitfalls to the careless buyer. A careful review of the previous year's trading, a thoughtful probing of the ever-altering inclinations of the district for which he caters, and a consideration of that itinerant summer trade which country retailers especially command, should give the dealer all the pointers necessary in planning out his campaign.

* * *

Having arrived at this satisfactory stage, the progressive man takes the earliest opportunity of placing his orders with his jobbers, so that he shall be among the first supplied. Here lies the great value of our remark as to taking time by the forelock. Goods cannot be secured by return of post. Very few dealers but had cause to complain of the transportation delays of last year. The elapse of three weeks, or a month between the despatching of the goods, and their arrival at the proper destination, was a common occurrence. There is nothing to warrant the hope that the transportation facilities of the country will be any freer from those annoying delays during the present year. In addition we have the general opinion of jobbers that owing to manufacturers curtailing to some extent their production, there is every possibility of a shortage in a good many lines. This, therefore, makes it incumbent upon the retailer to order early; and if at the same time he wishes to order wisely, there must be no procrastination.

It may seem a little previous to talk of the spring sporting demand, when the puck has hardly started to fly about the ice, and the varnish on the toboggans and sleds shows but slight traces of wear; but time goes quickly. One season's supply is ordered long before the demand on the previous one is over, and what little interval there is between the two, is none too long for the retailer to plan out the extent and character of his buying. Now is the time, therefore, for the merchant to fix his attention on the sporting lines he means to carry when the snow disappears, and the baseballers, the boating men, the fishermen, and the great community of athletes generally are eager to begin operations. During these long winter nights, the merchant can set his inventive mind to work as to how he can best exploit the probable sporting trade in his district. He can evolve various ideas of advertising, striking and novel forms of circulars, attractive ideas of window displays, how to secure a hold upon various club organizations, and may be to combine business and pleasure by fostering the athletic enthusiasm of his district. There are hundreds of ways a dealer can push his sporting trade if he only takes the trouble to sit down, and think them out quietly.

* * *

Perhaps there was some talk last year of forming a baseball, lacrosse, boating or tennis club. Well ! He may have a room which would suit these enthusiasts as a club room, or some ideas which would help forward the project. Perhaps some have expressed the resolve to go camping this summer. If so, tents and cooking utensils will be wanted. Rifle and revolver clubs are increasing in favor all over the country, it may be that the dealer could set the ball rolling, or shall we say, get the ball fired, by suggesting the idea of such a club, either by a prompter in his window, or by a circular. Be well prepared, too, for the fishing demand. Rods, lines, cans, waterproofs, will all be wanted, and do not lose a customer by not having the goods in stock. He will not send you a postal card three weeks before announcing his intending visit to the store. Remember what lines went best last year, and if indications point to a continuance of the popularity of the particular sport concerned, order from the jobbers accordingly.

* * *

A store may be located in a place rapidly coming into favor as a summer resort, or as a starting point for some up-country one. The demand here for sporting goods will probably be an increasing one, especially if the retailer shows that he carries the goods required. If the store be situated near a main road there is another good and growing demand to cater for, and that is in auto supplies. Every year sees an increase in the number of cars that traverse the country, and the autoist knows to his cost, the many little accidents that occur on the road, and the replenishing that he needs when on a long journey. An elaborate mechanical shop is not necessary, nor an extensive capital, to supply spark plugs, various tools, and to be able to replenish batteries. The dealer who noticed an increasing number of autos pass his door last year, should be wise enough to take the hint. The fact that he carries such a line is soon disseminated among the votaries of the sport, and his store reckoned in when the schedule of a journey is being fixed.

* * *

A retailer should always be on the lookout for any novelty that may appear on the market. The handy little baseball game scorer, which can be so easily carried in the pocket; the Daisy cork rifle toy, which, worked by compressed air, offers amusement to young and old, are good selling articles. Another line which is rapidly coming into favor is that of sporting statuary. These ornamental bronze figures, representing various forms of sport, such as a baseballer in the act of striking; a footballer in the act of kicking the ball, and so on, make good prizes at sporting contests, handsome additions to club premises, and beside tend to help in the decoration of a sporting window.

RAZOR BLADE SKATES.

The accompanying illustration shows one of a new line of German skates being introduced on the Canadian market for next season by Thomas B. Lee, 30 Front street east, Toronto, who is making a specialty of jobbing high-priced cutlery and skates, he finding that the trade is demanding goods of quality, on which a fair margin of profit can be secured. The skate is made to Mr. Lee's pattern by Edward Engels, Remscheid, Germany, and is known as the "Razor Blade," being hand forged Sheffield steel, finely made, and sold under a guarantee. At Mr. Lee's sample rooms a large variety of English, French and German cutlery and German skates is exhibited.

Razor Blade Skate.

HARDWARE TRADE GOSSIP

Ontario.

Mrs. J. Miller, wife of J. Miller, secretary-treasurer of the Bond Hardware Co., Guelph, died suddenly, early this week.

William Christie, father of Christie Bros. & Co., hardware merchants, Owen Sound, died suddenly at that place on January 30.

R. G. Bruce, brother of R. J. Bruce, hardware merchant, Toronto Junction, has joined the traveling staff of the Kennedy Hardware Company, Toronto.

John J. McCarthy, representing the Main Belting Co., Philadelphia, was in Toronto last week. The Main Belting Co. contemplates opening a Canadian branch in Toronto in the near future.

George Allan, Burlington, Ont., one of the oldest hardware merchants in that section of the province, has disposed of his hardware business, his nephew, J. S. Allan, being the purchaser.

John Wood, of Chicago, fifteen years ago a hardware merchant at Erin, Ont., died this week. He came to Toronto twelve years ago, and six years later moved to Lucknow, where Mrs. Wood died. He had lived in Chicago about four years. Pneumonia was the cause of death. A son and daughter survive.

W. F. Mosey, formerly with his father J. G. Mosey, hardware merchant, Blyth, and more recently with J. F. Cairns, Saskatoon, has been spending a few weeks in Ontario, returning to Saskatoon this week. Mr. Mosey called on Hardware and Metal while in Toronto. For the past year he has been a partner in the Hub Cornice and Roofing Works, Saskatoon, and has had some large metal working contracts in the country surrounding the "Hub" city, one of the largest, however, being the Saskatoon court house, the figure for which was $1,350.

Quebec.

Galaneau & Co., hardware merchants, Montreal, have assigned, with liabilities amounting to about $7,000.

Peter McNamee, moulder in the Montreal Steel Works, who recently jumped into the Lachine Canal and saved a child from drowning, has been presented by the company with a purse of gold to mark his gallant conduct. McNamee's fellow workmen have also started a subscription to obtain a medal for him.

A. Galarneau & Co., hardware merchants, Montreal, have gone into liquidation at the request of Pierre Dufresne, accountant, whose claim amounts to $252. The liabilities amount to $7,000 and the principal creditors are Buck Stove, $1,012; Canadian Store Furniture, $919; Davidson Manf. Company, $1,162; Howard & Cowan, $1,200; Le Canada, $541, and the Record Foundry, $449.

Western Canada.

D. E. Humbke, hardware and furniture dealer at Rosenroll, Alta., has made a voluntary assignment.

E. G. Hess has purchased the bankrupt hardware business of Quinton & Cruickshanks, Balcarres, Sask.

Frank Drew, a well known insurance agent at Winnipeg, suicided on Feb. 6, leaving a note saying he feared he was about to become a victim of epilepsy. He is the son of James Drew, of the Gurney Foundry, one of the old-timers and prominent business men of the city. The family came from London, Ont., to Winnipeg. The dead man was a famous athlete and member of the Rover hockey team of western fame. He went to a hotel, wrote a pathetic note to his young wife and father, and blew out his brains.

Great Britain.

Eley Bros., Ltd., Birmingham, Eng. have just introduced an improved form of cordite to be used for the loading of .303 and all other express cartridges of .475 bore and under. The new explosive is to be known by the name of "modite." It is of special composition and is in the tape or strip form.

EXHIBITS AT CONVENTION.

The Guelph Stove Company and S F. Bowser & Co., Toronto, intend to make exhibits in the Palmer House sample rooms, Toronto, next week, for the benefit of visiting delegates to the Retail Hardware Convention. The discussion last year on oil tanks has encouraged the latter firm to make a display this year.

The Dover Mfg. Company, manufacturers of asbestos sad irons, expected to send over an exhibit, but have decided not to do so at this convention.

MONTREAL HARDWARE MARKETS.

Montreal, Feb. 7.—January's business compares favorably with the trade of the same month in past years and as a result the jobbers and manufacturers consider the outlook for a prosperous season favorably. The snowstorms of the past week have demoralized business for the time being and in the city and surrounding district roads are blocked by the large fall of snow, which has also demoralized the railroads.

Factories are working full time again and as a result large stocks of hardware are rapidly accumulating. At present it is considered probable that the full force of spring delivery will not be felt until well on in March, a contrast to last year, when delivery started in January.

Building Hardware and Supplies—The scarcity of some lines late last fall has been removed and large stocks of all varieties await the return of spring. The market is firm and the demand is steady. Reports from the province of Quebec and the Maritime Provinces concerning the amount of building which will be done this year are favorable to the sale of large quantities of these goods.

Nails—Cutting is still going on with a large stock in the market. We quote a normal price of from $2.30 to $2.35.

Lumbermen's Supplies—The demand is still slow and prices remain firm. The snow will add to the demand, but prospects for an average call are considered unfavorable. Prices are unchanged.

Railroad Supplies—Construction work is still being maintained, a steady demand exists at present for rail, track bolts, ties, hammers, crossbars, blasting powder, etc. Prices unchanged.

Bolts and Nuts—Varieties used for railroad construction work are in demand, other lines are lifeless at present. Quotations are unchanged.

Shot—Sorting-up orders continue to be the main feature of the trade. Orders for spring delivery are expected to start coming in the near future.

Screws—Booking has received a start and orders for spring delivery are beginning to appear. Makers have not yet caught up with back orders, and if the market suddenly resumes normal proportions, another scarcity will be the result.

A NEW BLUE-BLACK IRON PAINT.

At the recent meeting of the Iron and Steel Institute at Vienna, J. R. Carulla described a new blue-black paint as a protective covering. The blue-black precipitate obtained by the new process is magnetic, showing it to be Fe_3O_4, and is a valuable addition to the list of pigments which can be employed with advantage for the protection of structural work. A plant has now been put up in England to work the process.

BOARDS OF TRADE CONVENTION.

Representatives of the various Boards of Trade of Southern Alberta met in Lethbridge last week and formed a new organization known as "The Southern Alberta Boards of Trade," to deal with those problems which particularly affect the people of the southern part of the Sunshine Province.

Mayor Henderson, of Lethbridge, extended a cordial welcome to the delegates and emphasized the importance of forming a strong organization to advance the interests of Southern Alberta. He hoped that arrangements would be made for annual gatherings.

The Magrath Board of Trade introduced a resolution petitioning the members of the Government of Alberta to establish the proposed Provincial Agricultural College at Magrath, supporting their contention with facts as to the satisfactory position of their town as a site for the college, in that wheat and beet raising, both with and without irrigation, had been carried on for some years in that locality.

The resolution, which was championed by D. H. Elton and other speakers from Magrath, provoked a lively discussion. Several other districts presented their claims, but delegates from Lethbridge and Raymond supported the ambitions of Magrath and the resolution was finally adopted by an unanimous vote.

A constitution was adopted after some discussion, and it was decided that the annual meetings of the association shall be held on January 2nd.

SITUATION VACANT.

WANTED—An up-to-date hardware man who has a thorough knowledge of tinsmithing and furnace work; one who can work and manage either department when required, must be a hustler and not afraid of work. Apply at once giving reference and stating salary required. D. Hall Sutherland, Conora, Sask. (10)

RETAIL ORGANIZATION.

The organizing of different branches of retail trade has brought a better feeling among the members of the trade and in addition a greater profit from their work. The resultant prosperity has not been from a combination to keep prices on a high level, for whenever a fictitious valuation has been established the organization is foredoomed. The advantage has been in a better understanding amongst competing merchants and more intelligent merchandizing resulting from an exchange of ideas at the trade conventions. Another source of profit is the moral effect a retail organization has upon manufacturers or jobbers who are inclined to indulge in selling to non-tradesmen. More care will be exercised when it is realized that a large section of the retail trade is organized to protect itself against unfair competition.

The retail hardwaremen of Ontario have had two years' experience with a trade organization and they must feel well satisfied with the results. The world has not been turned upside down, the jobbers are still in business, some price-cutting still exists and many of the "big" retailers in the large cities are still holding aloof from the organization but on the other hand some satisfactory results have been achieved through organization and the sane and conservative methods adopted by the association officials have won for the organization the respect of the jobbers and manufacturers and is steadily winning the support of retailers who have withheld their support until the permanency of the organization is assured.

An organization that can survive the criticism and uncertainty of the first two years, besides accomplishing practical results to merit general approval and, in addition, can show a substantial balance in its treasury is reasonably certain to steer clear of dangerous rocks in the future.

Consequently there should be no further hesitancy on the part of doubting ones. Rather should the men of wider experience in the trade step forward, attend the convention in Toronto next week and if a favorable impression is secured, agree to take their share of the executive work of the association.

The Ontario Retail Hardware Association has passed its period of infancy. It is now a vigorous youngster with every prospect of a long and useful career. Its future usefulness, however, is just what the men in the trade make it. Large retailers and smaller dealers, members and non-members, all who believe that men intelligently organized can get along more profitably than if unorganized, must share alike the responsibility of the association's future.

The officers for 1907 will make their report at the convention next week. May the officers for 1908 be able to present an even better report a year hence. And may the gathering next week be the largest in the history of the association as everything now indicates.

LARGE EXPENDITURES DURING 1908.

A canvass of the financial institutions in Montreal last week revealed that fully $100,000,000 will be spent in Canada this year in legitimate development work by the large railway and industrial corporations.

The Canadian Pacific, for instance, expects to realize from twenty to twenty-five millions for new branch lines, etc., from the sale of a new stock issue and the sale of debentures. Then, the Grand Trunk Pacific is expected to spend another twenty millions, and the Canadian Northern Railway ten millions more. The Dominion Government is also engaged in constructing sections of the Grand Trunk Pacific, which, it is estimated, will entail an expenditure of another twenty millions.

Add to this the necessary expenditures of the various municipalities, street railway companies, industrial corporations, etc., and another twenty-five millions will be a conservative estimate to add, making a total of upwards of a hundred millions, without including any of the proceeds of the grain, lumber, pulp and other commodities going into export.

The greater the expenditure on railway development the larger the producing power of the country becomes and with the free lands in the western States all taken up, the tide of immigration must continue to flow into the rich undeveloped areas in northern and western Canada. As each immigrant who takes up land at once becomes a producer he contributes to the rapidly growing wealth of the country.

Considering these facts, Canadian bankers consider that there is no reason why Canada should be influenced by the depression in the States, and their opinions should do much to encourage those who take a gloomy view of the prospects for the coming year.

HAMILTON'S BIG INDUSTRY.

Interesting is the history of the Hamilton Steel & Iron Company. Originally promoted by Toronto men to help Toronto industrially, the Ambitious City at the head of Lake Ontario secured the industry through the short-sighted action of the lodge politicians who controlled Toronto's municipal government.

Senator Robert Jaffray, speaking to a representative of this paper this week, told how he had about ten years ago become interested in a process of iron making in Quebec Province and had learned that some United States investors proposed establishing a blast furnace in Canada. He endeavored to induce them to locate in Toronto and succeeded in interesting them. A small site on Ashbridge's Marsh was selected, and for a bonus of $50,000 Toronto could have secured the industry. The City Council, headed by R. J. Fleming, now manager of the Toronto Street Railway, were indifferent, however, and Hamilton seized the opportunity.

The blast furnace went to the Ambitious City and numerous other manufacturers desiring to locate where iron is obtainable at first cost, have also chosen Hamilton for their headquarters. Only a fortnight ago another steel industry looking for a site said: "We'll go to Hamilton" for that reason.

Hamilton deserves its reputation for enterprise and progressiveness, and its big jump forward during the past ten years is largely due to the far seeing

action of the Council of a decade ago in encouraging the blast furnaces to select a site on the shores of Burlington Bay. They have reason also to congratulate themselves upon the success of the Iron & Steel Company, which, out of its earnings has doubled the size of its plant recently, besides increasing its capitalization from one and a half to five million, shareholders receiving three shares where they formerly held one. Government bounties and protective legislation undoubtedly helped in building up the industry, but good business management has also been an important factor.

Toronto, after a decade, is again negotiating for another iron and steel industry, the Mackenzie & Mann interests having asked for a site at Ashbridge's Bay many times larger than could have secured the blast furnaces that went to Hamilton. Will Toronto learn by Hamilton's experience, will it pay the higher price now demanded by the blast furnace promoters, or will the city again allow such a pivotal industry to slip by and build up some other manufacturing

KEEP INFORMED.

Knowledge is power, therefore, get knowledge. Many people realize this, yet few put it into practice. The merchant who fails to keep posted on trade conditions and trade doings, is losing power and losing money at the same time. In this connection, there are two sources of information which a dealer should never neglect—the commercial traveler and the trade newspaper. The dealer is prone to consider the first-named as a personage from whom he must, perforce, buy goods, and the second as a necessary sort of evil, costing a dollar or more a year. Such a mistake! Dealers should get value out of both traveler and trade paper. Consider them as servants and derive as much information and assistance from them as is possible.

A MERCHANTS' CLEARING HOUSE

A plan for a "commercial clearing house," an institution through which business houses may settle their debts and collect their bills among themselves without recourse to the banks, has been launched by the Chicago Creditmen's Association.

Representatives of three hundred and fifty large business houses have enthusiastically endorsed the proposal and a special committee has been appointed to make an investigation with a view to devising ways and means to put the plan into operation.

The plan is simply the adaptation of the "bankers' clearing house system" to the needs of mercantile affairs. Large mercantile houses could proceed at once to effect debtor and creditor settlements among themselves by the exchange of cancelled checks, in a manner similar to the settlements made by banks, without the necessity for the exchange of real money. These mercantile settlements would be made on the basis of values of sound mercantile accounts.

The success of this plan in Chicago will place a powerful weapon in the hands of merchants who feel that they are not securing fair treatment from the banks, many complaints of this nature having been heard during the past few weeks.

FALL OF WATER TANKS.

From the number of water tanks falling in the past few months there must be some radical defect in their construction or care. The first defect may be the foundation. Concrete bases should be built on a solid rock foundation, where possible, and a six to ten foot base of concrete on "hard pan" where rock cannot be reached. Hoops may not be of sufficient strength or there may be some defect in the supports or in the steel or wood of the tanks. The fall of a tank is attended with serious loss usually, and insurance companies issue booklets giving specifications for their construction and care.

The life of a wooden tank is from 12 to 30 years, but usually about 15 years, but it must be kept well painted and filled with water. It shrinks when water gets low. One advantage of a steel tank, if paint is neglected, is that a small spot will rust through and show itself, whereas, if a wooden tank is neglected, it may burst the hoops suddenly and cause serious damage.

Hoops require special attention and removal of rust before painting. Particular attention should be given to tanks located on roofs and covered with corrugated iron. The hoops corrode very rapidly on account of the dampness held between the corrugated iron and the staves, and they may be found nearly rusted off in a few years after erection.

If the tank is left empty, the sun and rain will cause the staves to warp and twist so it will be impossible to make the tank water tight afterwards.

One new tank that fell recently was evidently due to weak supports. Another tank removed from a plant a short time ago, was found to be rotted through. Managers of factories with tanks cannot take too much care with tanks. They cannot last forever, and careful inspections should be made each week.

It is false economy for a manufacturer to cut a builder of tanks to the last cent and think he is saving money. The structural work must be of the best, and the supports sufficiently strong, The builders are working with formulae that are more or less in error as in any structural steel work. A large factor of safety must be allowed to obtain supports to hold the load upon them. The supports, too, must be carefully shielded from the weather and the workmanship must be done with great care. Otherwise there will be more tales to tell of fallen tanks.

SHORTAGE OF WORKING CAPITAL.

The great majority of business failures which come to light from day to day, whose assets and liabilities are reported with any degree of detail, seems to show that the amount of working capital is altogether too small a proportion of resources for safety. It is skating on thin ice, says the Wall Street Journal. A concern whose failure was recently announced, which did a manufacturing and commercial business, was found to have something like $300,000 of liabilities, $500,000 of assets, mainly in the form of stocks which could not readily be converted into cash, and but $557 of cash, only about 10 per cent. of which was in bank.

Aside from the question of the proportion of cash to stocks and supplies, it is not likely that a business concern with only $57 in bank, and half a million assets, is likely to stand very well with the bank because of the low state of its account. In time of need accommodations for such a depositor are difficult to get. The bank is more interested in the balance on its own books than it is on the ample supply of goods on hand. Instead of their being a source of strength, large stocks are an element of danger in mercantile enterprise. Large stocks are apt to mean low cash assets. It is far safer to reverse the order by converting stocks into cash, thus improving both credit and cash resources even at the expense of the loss of some custom.

Star gazing doesn't pay, unless you're an astronomer.

Its almost as easy to worry as it is to tell others not to.

When complaints are made by customers always count them. Then compare the number of complaints with the number of customers. Do not be governed by the dealer's opinion, but form your judgment from the counting. The majority rules.

Markets and Correspondence

(For detailed prices see Current Market Quotations, page 66.)

MARKETS IN BRIEF.

Montreal.

Copper—Just holding at 15c.
Ingot Tin—Fairly firm at 32c.
Lead—Steady.
Pig Iron—Unchanged.
Spelter—Maintaining strength.

Toronto.

Wire Nails—Prices unsettled.
Binder Twine—New list issued.
Copper—Weaker.
Tin—Advance in foreign markets.
Lead—Holding firm.
Pig Iron—Buying inactive.

TORONTO HARDWARE MARKETS.

Toronto, Feb. 7.—During the past week the railroads have been blocked so much that little business is coming forward. Travelers in numerous cases are not even in communication with their firms, owing to the condition of the country roads and the railroads. The condition has however only affected business temporarily; the local jobbers are unanimous in the view that January business was at least up to the average of other years. Among the retailers in this centre the heavy snowfalls have caused a brisk demand for snow shovels and in consequence a number of orders for these goods are being received. Collections continue to improve and in consequence the outlook from the jobbers' standpoint keeps getting brighter.

During the week the prices of rope and binder twine have been revised and the reports of price cutting on nails coming from the east is expected to have an effect on local prices in the near future.

Builders' Hardware and Supplies—No change in prices has been registered during the week and in keeping with the rest of the market the demand is quiet at present. Builders' outfits are in demand, however, so the business will recover as soon as the weather conditions change. Articles trimmed with brass and bronze have undergone a slight decrease but generally the market remains firm with no changes at present.

Nails—The situation in the east, where price cutting to a large extent has been indulged in by manufacturers and jobbers during the past two weeks, is rapidly approaching a climax which will likely affect the local market during the week. At this writing the old figure, $2.45 per keg, is generally maintained, though some dealers have already quoted much lower figures.

Rope and Binder Twine—The continued weakness in the hemp market has resulted in a revision of prices, which went in force February 1. The reduction ranges from 1½c to ½c, all sizes being affected. In local circles the revision is only considered temporary.

Shot—The market continues firm with a rising demand. Booking has received a satisfactory start, though the demand is still small. We still quote 20 per cent. off list.

Copper and Brass Goods—Business remains satisfactory, considering present conditions and contrary to expectations quotations are being generally maintained. A slight revision is expected in the near future.

Bolts and Nuts — Some booking is being done and business continues satisfactory. There has been no change in prices during the week.

Screws—The demand is still slow, but indications point to a speedy revival of trade. Booking for future delivery has received a good start and prices are being firmly adhered to. Quotations remain 85 and 10 per cent. on flat and 80 and 10 per cent. on round heads.

Soldering Irons—These lines are experiencing a revival and business is reported brisk since the recent reduction no further change has taken place in prices We still quote 37c to 40c per lb.

Sporting Goods—The cold snap and snowstorms have awakened a considerable demand for toboggans and snowshoes. Skates and hockey goods are being cut, owing to the lateness of the season. Ammunition of all kinds has been in demand for some time.

Poultry Netting—This line is being booked for future delivery in promising quantities. Prices remain unchanged since last writing.

Lawn Mowers—Booked business is a good average with good possibilities for future business.

Building Paper—The demand is on the increase, booking now being received in fairly large quantities. The revised price list is contained in the current market reports.

MONTREAL METAL MARKETS.

Montreal, Jan. 7.—The feature of the markets this week has been the strong recovery of tin in the Old Country. Not only has the decline noted in our last issue been wiped out, but a good advance made, with the metal closing firm. As against this, however, there is a further fall in copper. Of the two metals, tin apparently stands in a much stronger position. Stocks in America are very light and the demand is increasing with every prospect of higher prices. Despite this upward trend, English producers are not exporting freely, which does not look as if any great unloading of stock on that side of the Atlantic was feared, or there would be a stronger desire to take advantage of the export market. There is therefore a good reason why tin should maintain its strength. Copper, on the other hand, although being exported largely is being shipped on a falling market, and if the metal is held for speculative purposes then the position becomes somewhat precarious, especially in view of the fact that the American consumption is slight.

The unsteadiness of these primary markets naturally tends to weaken things on this side, and although prices are being well maintained locally the tone of the market is not firm. There is a natural reluctance to look too far ahead, and merchants are content with the fact that for the time being prices are without change. A strengthening influence all the way round is imperative if a setback is to be avoided. Slumps, however, are hard to rally from, the weakness engendered by them being long retained by the markets.

Pig Iron—Pig iron has strengthened a little in the Old Country, and with stocks on the light side, the advance should be maintained. An increase in the demand is expected and it looks as if the metal would occupy as strong a position as it did last year. Buyers have not come into the market for importing as yet, but there should be a steady movement next month. The demand from stock continues fair, and bars, and boiler tubes are moving well. We quote: Cleveland warrants 47s 10d; Middlesboro No. 1, $21.50, ex-store with a shading for large quantities for import; No. 3, $20.50; Summerlee, $25.50.

Copper—The copper situation is not quite so sound as it was, although there is no reason to anticipate any setback just at present. The English market still declines, and is now £61, a drop of £1 over last week. It looks as if speculative buying on a far from strong market was telling its inevitable tale. How far the unloading will go depends upon the accumulation of stock that has taken place during the many weeks of steady importing which has characterized the primary market. So far prices in New York are holding ground, and a rally in the domestic call would set off the effect of the English decline. The immediate future is uncertain, but at present we still quote locally 15c, with a cut for second-hand lots for immediate delivery.

Ingot Tin—This metal has jumped up again in the Old Country, and has more than wiped off the decline of last week. In one day prices advanced £2, and speculators, for the time being at any rate, have abandoned the idea of squeezing the market. It is evident that no great unloading of stock has occurred and although it cannot be said that any great confidence can be placed in the market, still the position is sounder than it was last week. Stocks in America are light, and the demand should encourage English exporters to ship freely. This should strengthen the position of the primary market. The English quotation is now £125 15s, closing firm. We still quote 32c locally.

Lead—Lead has advanced in the English market 3s 9d and is now £14 16s 3d. The market shows promising signs of strength and the demand is improving slowly but steadily. Many producers seem to be unwilling to sell for future delivery, which is a very good feature, indeed.

Antimony—Antimony at present is dull, and there is no change to note. The foreign markets are maintaining strength and prices are ruling about

the same. We make no change in local quotations. Antimony, however, is a metal that cannot be relied upon.

Spelter—Spelter has gone back 10s in the Old Country, and is now quoted £27 7s 6d. This, however, does not indicate any great signs of weakness. Quotations are still $4.50 to $4.55 East St. Louis, and we quote 5½c for foreign and 5¼c for domestic.

Old Materials—The market is still quiet, although inquiries for both copper and lead are improving. Stocks are not over large now and a steady demand would soon clear them out. Prices are unchanged, excepting in the case of lead, where there is an advance of ¼ cent. We quote: Heavy copper and wire, 11½c; light copper 10c; heavy red brass 11c; heavy lead, 2¾c; wrought iron, $12; No. 1 cast $13; No. 2 cast $10.

TORONTO METAL MARKETS.

Toronto, Feb. 7.—Asked regarding iron prices this week a Toronto man stated that business was dull and that no base existed upon which to work. There is no reason for jobbers to offer cut prices on a declining market, and consequently they are holding to the old figures and giving consideration to all offers made them. There is little buying, however, even on this basis.

While iron appears to be strengthening a little in the Old Country the conditions in the States are unsatisfactory. The leading interests have agreed to maintain prices for another month at least, but this is considered as but putting off the day for an inevitable reduction. Buyers consider prices too high and purchases of steel and wrought scrap are being made to take care of immediate needs.

Locally buying is so inactive that there is talk of a large Ontario furnace banking its fires until buyers are ready to enter the market.

Tin—In foreign markets tin has been the feature of the week, prices having been marked up owing to speculative influences to a point equalling a cent advance in New York. No change has been made locally, however, and we continue to quote 31 to 31½ cents.

Copper—Foreign markets have sustained a slump of about £1 over last week, owing, it is said, to the unloading of some of the surplus stocks held in England. The heavy exports from the States to Europe continue, however, those of January totalling about 35,000 tons, against an export of 40,000 tons for the whole first quarter of 1907. In all of 1906 the exports were only 48,000 tons. It is evident, therefore, that the recent heavy exports do not reflect the requirements of foreign consumers, the stocks going into warehouses and available for speculative movements should the market advance. Locally we quote 14 to 14½ cents.

Lead—An advance has been made in Great Britain, and with a moderate demand existing the market has a satisfactory outlook. We still quote $4.35 per hundred pounds for imported pig, with domestic about 15 cents less.

Spelter—The demand is quiet, with $5.25 still quoted for foreign, and $5 for domestic.

Antimony—Dullness is reported, with prices unchanged at 10½ cents.

Old Materials—We make no price changes, but the demand for lead is improving. Other metals are absolutely dull.

U. S. METAL MARKETS.

Cleveland, O., Feb. 6.—The Iron Trade Review says: Our monthly blast furnace statistics reveal a continuance of the policy of curtailment, the production for January being 1,043,374 tons, against 1,234,733 tons in December, and 1,820,558 tons in November. There were only 139 furnaces in blast on the last day of January, compared with 154 on Dec. 31, and 226 on Nov. 30. The curtailment is to a large extent in merchant stacks. Our annual statistics of ore shipments show that last year 41,288,755 tons of ore were shipped by lake and 956,315 tons by rail from the Lake Superior region, a total of 42,245,070 tons, compared with 38,523,439 tons in 1906.

Owing to the fact that the price of steel bars is $4 higher than the recent quotation on bar iron, there has been a marked increase in orders for the latter at the expense of the former, and western manufacturers have advanced the price of bar iron $2 per ton. Bookings of structural material show a fair volume of business, and prices are being well maintained. Some of the smaller plate manufacturers are shading prices.

A number of furnace interests from the central west last week declined longer to act in harmony with those which favored maintaining a price of $17 valley for No. 2 foundry, and one leading house which had been adhering to prices announced that it would no longer do so, but owing to the sentiment developed at New York in favor of co-operation, it has been decided to make another effort to secure harmonious action on the part of furnace interests of the central west, and to this end a meeting will be held in Cleveland on Saturday.

THE MAGNET IN INDUSTRY.

A simple childish plaything has suggested an idea that will save the railroads hundreds of thousands of dollars every year in wages, in repairs, and in time. Every school boy has played with a horseshoe magnet, picking up knife blades, needles, nails and any odd scraps of iron. Nowadays, instead of needles and nails, steel rails, wheels, castings, ingots, pig iron—anything in which steel or iron appears—are lifted by a magnet, and carried to the place where it is wished to deposit them.

The loading and unloading of freight cars filled with iron and steel has always been one of the most difficult tasks connected with railroading. Large numbers of men have been required to do the work, and each piece had to be handled separately, with many unavoidable delays. If cranes were used for the heavier pieces, chains had to be adjusted; weights had to be balanced, and the loads had to be swung. It was a most inconvenient, tedious and expensive operation. The expense and inconvenience were not so important, but it took too much time. The object of modern transportation is to annihilate time, and the loading of iron by hand was clearly out of date.

The Pennsylvania freight yards in Jersey City are among the largest and busiest in the world. Every moment, night and day, a huge volume of freight pours into the yards to be distributed to the four points of the compass. Cars are handled there by the hundred thousand, and freight by the million tons. The managers grew impatient at the necessity of doing so much laborious hand work. Then some one suggested a magnet.

The device is a simple contrivance, looking like a double crown of corrugated iron and steel, its two poles strongly marked, with its armatures concealed, and all suspended from the chains of a heavy crane. Around this chain is wrapped the current wire, which gives the device life or takes it away.

It is an interesting sight to watch the unloading of cars by the new method. A big steel truck, piled high with rails, rolls within reach of the crane. The man in charge swings the magnet, allowing it to descend toward the load. He presses a button. The rails seem to thrill; like live things, they leap up to the magnet, ten tons of them at a time, clinging firmly, all in place and in orderly array. The crane hoists the whole; the rails swing clear almost without a rasp or sound, and just as noiselessly they fall into the waiting barge or on blocks. Nothing could be more simple or easy.

Or take scrap iron. The magnet dips its nose into a pile, and emerges looking like an alligator pear, with ten tons hanging to it. It does not take long to fill or empty a car at that rate. And there is no shouting or discussion or halting for rest; the magnet does its work quietly, tirelessly, and effectively.

At a recent test to determine the advantage over the old method of handling iron, six men were put to work unloading one car of wheels, while the magnet, which requires four men in its operation, went to work on another load precisely similar in size, material and weight. The magnet finished the job in an hour; the six men toiled half a day and were just through.

Other magnets have been ordered and soon all the handling of iron in this freight yard will be done by electricity. Magnets will do the work of hundreds of men, cut down expenses, and above all, save time.

SOUTH AMERICAN AND CANADIAN TRADE.

William Johnson, of Buenos Ayres, visiting Montreal in the interests of Oanadian trade with South America, delivered an address at a meeting of the Montreal Manufacturers. He referred to the stimulus in trade which had recently been aroused in South America, and said that the total foreign trade of the ten independent republics was estimated for 1907 at one billion, five hundred million dollars. The continent was now entering upon a new industrial movement. In this there were great possibilities for the expansion of Canadian trade. The manufacturers of the Dominion had alalready put forward a well directed and sustained effort to secure a large export trade, and at the same time to establish relations with the South American republics. The effect of this movement would be far reaching, and of much importance to Canada.

METAL TRADE ITEMS.

Dissolution of partnership between Norway and Sweden is the cause of attracting attention from Norway's products and placing it on the goods of Swedish make, where it rightfully belongs, according to Oscar Laquist, of Stockholm, Sweden, who is now in the United States representing a Swedish combination of blast furnace concerns. "For all time before 1905 the world marveled at Norway's iron and steel, besides its other products," said Laquist. "In every large manufacturing city of the country the business men were continually shouting, 'Norway, Norway, Norway,' until the name became sickening to loyal Swedes. The truth is that Norwat makes very, very little steel compared to that which is made in our country. One thousand tons a year is a high estimate of what Norway can send out. Sweden will annually export hundreds of times that amount. Since we withdrew from that partnership with Norway we have attempted to link the name of Sweden with its products. Gradually the world is beginning to realize that the famous old Norway steel and iron was really of Swedish make. Practically the only difference in the methods of manufacture is in our use of charcoal against yours of coke in the blast furnaces. The iron product of Sweden, called Norway iron, perhaps is of superior quality. You know that our iron is sometimes as good as steel."

It will be interesting to determine how different the wire trade may be from other finished steel consumers in the United States. It seems improbable, says the New York Journal of Commerce, that there will be a great response to the invitation of the American Steel & Wire Co. made in the following trade circular: "At a time when trade is dull, money scarce and steel products declining, no incentive is offered the wire trade to supply the mills with orders upon which to resume operations. It seems probable that concessions will have to be made in this branch, eventually as in others."

The following is the American Steel & Wire Co. circular letter.

New York, Jan. 13, 1908.

"To the Trade:

"This is to advise you that our present prices on wire products are reaffirmed, and there will be no reduction to the spring trade. You can, therefore, with confidence, advise your trade of this action, and inasmuch as there has been a great curtailment of production during the past four months, and the stocks in the trade have been reduced to a minimum, we advise that you anticipate your wants as far ahead as possible so you will have the goods when the demand springs up."

The exports of British iron and steel in 1907 show an exceptionally large increase. They are by far the largest on record, and in practically all branches of the manufactured section of iron and steel exports there have been increases, the notable exception being that of rails. The pig iron trade has had a wonderful year of foreign shipments and is responsible for an increase in 1907 of 284,375 tons over the figures for the previous year.

The United States exports to Canada for the eleven months to Dec. 1, 1907, included steel rails, one million dollars; structural iron and steel, three and a half millions; wire, two millions; builders' hardware, two and a half millions; electrical machinery, one and a half millions; locomotives, one and a half millions; pipes and fittings, two and a quarter millions.

The total output of pig iron in the United Kingdom in 1906 was 10.149,000 tons. In 1907, it is believed, there was an increase of production over 1906, breaking all records, but no specific tonnage is given for the whole country. "It is estimated that the production of pig iron in the northeast of England in 1907 was 3,700,000 tons, compared with 3,628,651 tons in 1906, 3,485,762 tons in 1905, 3,123,195 tons in 1904, 3,108,050 tons in 1903, and 2,960,867 tons in 1902. More than one-third of the output was hematite quality, and of spiegel, etc., the production would be about 130,000 tons. The increase in make of pig iron in 1907 was not so great as that in 1906, for the furnaces in the latter year were driven almost as hard as in the past year, and there was not the same increase in the number of furnaces in operation. Of the 91 furnaces in blast in the northeast of England at the end of September last, 61 were within the limits of the port of Middlesborough. Most of the furnaces outside Middlesborough are occupied in the production of hematite pig iron, nearly all the ordinary Cleveland iron being made by Middlesborough furnaces. It is to be remarked that, while producers made 15 per cent. too much Cleveland pig iron in 1905, they turned out 4 per cent. too little in 1906 and 10 per cent. too little in 1907, yet the number of furnaces in blast had been increased considerably."

Commenting editorially upon the iron trade in 1907, the London Iron and Coal Trades Review states: "The phenomenal activity in the pig iron trade did not last the year out, and no one was surprised when a slackness set in; it was impossible that the pressure of demand which characterized the first half of the year could continue for long, and the reaction which was bound to come made its appearance in the autumn. What, however, was rather unexpected was the rapidity with which the transition from good to bad trade has taken place; at the end of the first half of 1907 the tone of business was very optimistic, at the close of the year most commercial men were inclined to take pessimistic views of the situation, probably too pessimistic, as immediately after such an inflation of trade as was experienced in 1906 and the early part of 1907 the slackening of business is likely to be unduly exaggerated. There can be no question that the position was rendered more unfavorable than it would have been by the wretched condition of financial matters in the United States during the last two months of the year. This severely affected general confidence and checked enterprise all around."

FOUNDRY IRON CLASSIFICATION.

The sub-committee of American steel manufacturers on ore and pig iron, has prepared a schedule with an endeavor to harmonize grading by fracture and by analysis in the different producing districts as follows:

Buffalo District.

Scotch . .	3.00 and over	0.05 and under
No. 1 foun.	2.50 to 3.00	0.05 and under
No. 2 foun.	2.00 to 2.50	0.05 and under
No. 2 plain	1.50 to 2.00	0.05 and under
No. 3 foun.	1.50 (under)	0.05 and under
Gray forge		0.05 (over)

Chicago Points.

No. 1 foun.	2.25 to 2.50	0.02 to 0.05
No. 2 foun.	1.75 to 2.25	0.02 to 0.05
No. 3 foun.	1.35 to 1.75	0.06 and under
Scotch . . .	2.50 to 3.00	0.05 and under
Silvery . .	3.00 to 3.50	0.05 and under
Gray forge		0.06 and over

Sampling.

The committee also submit the following of sampling, which has been a vexed question. The American Society for Testing Materials recommended the following method of sampling, which has been adopted by the American Foundrymen's Association:

"In all contracts where pig iron is sold by chemical analysis, each carload or its equivalent shall be considered as a unit. At least one pig shall be selected at random from each four tons of every carload and so as to fairly represent it.

"Drillings shall be taken so as to fairly represent the fracture surface of each pig, and the sample analyzed shall consist of an equal quantity of drillings from each pig, well mixed and ground before analysis.

"In case of disagreement between buyer and seller an independent analyst, to be mutually agreed upon, shall be engaged to sample and analyze the iron. In this event each pig shall be taken to represent every two tons.

"The cost of this sampling and analysis shall be borne by the buyer if the shipment is proved up to specifications and by the seller if otherwise."

Revision of Specification.

The American Society for Testing Materials is also considering the revision of specifications for foundry iron, and a meeting of the committee having the matter in hand has been called for Jan. 28 and 29, at the Columbia University. In issuing the call for the meeting the secretary states:

"It is now urgently necessary that a revision of the specifications for foundry pig iron be made. Progress in the purchase of pig iron for foundry purposes by analysis is now so marked and the specifications we have issued are so obsolete that your committee can no longer postpone action in the matter. The complaints that have come in recently are so strong and just that your chairman has taken advantage of the general meeting to call together your committee for this work."

Told by Ontario Correspondents

Retailers Not Alive to Importance of Opposing New Co-operative Act—Kent County Council Declines to Increase Pe ddlars' License Fees—Employes of Screw Factory At Ingersoll Make Presen'ation to Employer —Building Outlook Reported Bright— Belleville Industries New Officers.

BELLEVILLE.

Belleville, Feb. 4.—Despite the stringency which has curtailed business to some extent throughout Ontario, the Belleville hardware dealers feel quite optimistic over present conditions, as well as the outlook for the future.

* * *

The hardware merchants here are very enthusiastic over the coming convention of retail hardwaremen in Toronto this month. There will be several important questions dropped into the interrogation box from this city. There will be at least one Belleville representative present.

* * *

One drawback felt here recently among dealers is in dairy utensils. There has been a big falling off in some lines used by the farmers, such as milk cans, separators and all goods generally used by dairymen. This was owing to the almost entire failure of the hay crop. As a consequence, many dairy cattle were sold to dealers, as the owners had not sufficient fodder to last the winter. Hay sold here as high as $24 a ton on the market and $21 in the barn.

* * *

W. W. Chown and Mrs. Chown, who have been here for the past six weeks visiting their sons, W. A. A. Chown and Russell Chown, of the W. W. Chown Co., Ltd., have returned to their home in Edmonton Mr. Chown, Sr., is head of the Chown Hardware Company in the prosperous Alberta city. He says Belleville is fast improving as a commercial centre, and now occupies a very promising position, such as he anticipated and prophesied in 1904, the year in which he occupied the mayor's chair. For several years he was chairman of the finance committee.

* * *

At the annual meeting of shareholders of the Belleville Hardware Company, held on January 29th last, the following officers and directors were elected for the ensuing year: President, Hon. Sir Mackenzie Bowell, K.C.M.G.; vice-president, Allan McFee, mayor; directors, T. S. Carman, W. C. Springer, R. J. Graham. Dr. Gibson, E. G. Sills, Dr. Marshall, W. B. Robinson; solicitor, Col. W. N. Ponton; managing director, W. C. Springer; secretary-treasurer, Charles H. McMullen.

* * *

The annual shareholders' meeting of that promising new industry, the Brass and Steel Goods Limited, was held on the same evening as the above The president, Henry Pringle, presided. The financial and directors' reports were presented, discussed and adopted. The building has been completed and nearly all the machinery has been installed. Good progress was reported, orders in plenty coming in and shipments have been made already, which was very gratifying, in view of the tendency to "hold back" prevalent throughout the country. The election of directors for 1908 resulted thus: J. F. Wills, Henry Pringle, H. C. Hunt, R. J. Graham and P. C. Jones. At a subsequent meeting of the directors the following officers were elected: President, R. J. Graham; vice-president, J. F. Wills; secretary and managing director, H. C. Hunt; treasurer, P. C. Jones.

PETERBORO.

Peterboro, Feb. 5.—One of Peterboro's popular hardwaremen, in the person of Harry Morgan, was united in marriage this week, the bride being Miss Sadie Naomi Rutherford. Mr. and Mrs. Morgan have gone to New York on a wedding trip. The groom is vice-president and an active member of the Peterboro Hardware Company, and will have the best wishes of his many business friends for a happy married life.

* * *

E. M. Best, manager of the Best Shoe Company, and Ray Best, of the same firm, were in Toronto this week.

* * *

Business in the hardware line is only fair at the present time. Only a small amount of building is going on and this, of course, cuts down the demand for builders' supplies. Hardwaremen who handle sporting goods report an active trade in this line.

* * *

There is a probability that the street lighting system of Peterboro will be changed from the present system of open arclamps to the enclosed arc lamp system. The latter is recommended by the Peterboro Light & Power Company, which has the contract for lighting the city. It is in use at Brantford and several other cities. The fire, water and light committee of the city council is dealing with the matter.

* * *

Work on the new Normal School here has been delayed for some time owing to a delay in the installation of the heating apparatus. The electric wiring has been completed.

* * *

In a recent hockey match, the plumbers of the city defeated the drivers by six goals to nil. Other games are being arranged.

HAMILTON.

Hamilton, Feb. 4.—Although this is the slack season in the hardware trade both the wholesale and retail merchants in this city report satisfactory business. Trade is steady and with the spasmodic touch of real winter weather there is sufficient snow and ice so that the usual demand for sleighs, skates and other accessories has cropped up. The plumbing business is also comparatively steady for this time of year. Dealers in plumbers' supplies report large sales of gas stoves, etc.

The Ontario Lantern and Lamp Company is preparing a handsome booklet descriptive of their plant. It will be distributed amongst the trade shortly.

* * *

The Sawyer-Massey Company is preparing to make another extensive addition to its already large plant. Already ground has been broken and as soon as the weather becomes fine building operations will be started on a new warehouse.

* * *

Four young men have been arrested for making extensive robberies of brass from the portion of Burrow, Stewart & Milne's foundry which was burned recently.

* * *

It is astonishing what little interest local hardware dealers are manifesting in the Co-operative Bill which is before parliament. It is quite evident that the local retailers are not alive to the importance of the matter from the fact that none of them were conversant enough with the subject to give your correspondent an expression of opinion on the bill. While a few of the merchants express themselves as being opposed to the co-operative store system as a whole, there were some who displayed an absolute disinterestedness evidently because the business so far had not grown to any extent in Hamilton.

* * *

The agitation to have a plumbing inspector appointed in Hamilton has been revived, but the prospects for the appointment of such an official are not very rosy. The board of health is heartily in accord with the proposal and the trades and labor council is also boosting the project, but the aldermen cannot see their way clear to grant their request.

* * *

A. H. Phoenix, superintendent of the Hamilton Bridge Works, left this week on an extended trip abroad. He will devote his time entirely to pleasure and sightseeing and will visit France in addition to the British Isles. On the eve of his departure, the foremen at the bridge works presented him with a very elaborate suit case.

* * *

There is a movement on foot to build a large auditorium in this city for concert and other purposes. The proposition at present is to buy the ruins of the old Central Presbyterian church, which was burned over a year ago, and it is possible that a stock company may be formed to carry out the scheme.

* * *

It is possible that a new jail may be built within the present year. The present structure is growing too small for the growing demands of the city and it is out of date in many respects.

* * *

The fourth annual convention of the agents of the Frost Wire Fence Company was held at the company's offices in this city on Wednesday and Thursday of this week. About 200 representatives from all parts of the country were present and as on former occasions the firm combined business with pleasure. Wednesday morning was devoted to the reception of agents and in the afternoon they were taken through the plant and were shown the process of manufacture of the firm's goods. In the evening the

guests and the entire staff of the company were entertained at the Savoy Theatre and Thursday was devoted to a general discussion of business matters. The convention was brought to a close on Thursday night by a dinner which the company tendered its agents at the Waldorf Hotel.

* * *

A new company, to be known as the Canadian Writerpress Company, has been formed by a number of local capitalists for the purpose of manufacturing duplicating writing presses. The company has a share capital of $30,000, divided into 300 shares of $100 each The provisional directors are: Joseph Kneeshaw, Ambrose Purnal Van Fleet, George Wenig, John Patrick Hennessy, and Frederick William Gates, all of Hamilton.

* * *

Tenders will be asked for soon for the erection of a new fire station in the east end of the city. The money for the station was voted by the ratepayers last year, but owing to the condition of the money market it was impossible to float the bonds. The station will cost about $12,000.

* * *

Charles Ericson, inspector of steel for the Hamilton Steel and Iron Company, was married on Monday of this week to Miss Grace Presnail, daughter of William P. Presnail, of the Tuckett Cigar Company. The groom formerly lived in Jolliet, Ill.

GUELPH.

Guelph, Feb. 4.—Detailed plans have been drawn up by City Engineer Lindsay to be presented to the Government for the new winter fair buildings. They call for a building 300 feet by 120. The roof would be of iron and glass to admit light to the horse arena and amphitheatre. The cost is aproximately estimated at $30,000.

* * *

William Leader, hammer man at the Guelph Axle Works, had two fingers of his right hand badly nipped by the hammer striking them on Tuesday.

* * *

The Bond Hardware Co. have bought the stock of tinware and graniteware of T. E. Rudd, Quebec St., who is giving up business.

* * *

Plans have been submitted for an extension to the Separate School. They are to build an additional storey over the whole building, thus doubling the accommodation.

* * *

N. L. Stewart, manager of the Guelph Stove Co, has resigned his position with that company to go into the manufacturers' ageney business in Toronto where he will open an office and sample room. R. F. Stewart, who has represented the same firm on the road in Western Ontario will go with him.

LONDON.

London, Feb. 4.—Hardware jobbers are far from busy just now, so far as filling orders is concerned. Bookings, however, are quite satisfactory. Seasonable quiet prevails in retail circles.

* * *

The Purdom-Gillespie Hardware Company are about to remove to more commodious premises at 124 Dundas street, three doors east of their present stand. The company's rapidly growing trade made the procuring of more room imperative.

* * *

The plant and buildings of the defunct Wilcox Manufacturing Company were offered for sale at public auction last week, but were withdrawn, the highest bid, forty-five cents on the dollar, made by George W. Reid, not being satisfactory to the liquidators. Mayor Stevely is in receipt of a communication from a very large American firm with which he has been in correspondence, with a view to taking over the concern. If conditions are found to be favorable it is not improbable that this firm will seek to secure the Wilcox plant.

* * *

The variable condition of the copper market is blamed for the stagnation in the brass market at the present time, as a consequence of which local factories are doing little or nothing. One firm, which ordinarily employs about forty men, has now but ten at work, and this condition has prevailed since Christmas. "It is not a matter of hard times at all," said one manufacturer, "but so long as copper is up to-day and down to-morrow, I don't see how things can improve. As it is, the trade holds off in constant expectation of a change."

* * *

As a general rule, no one is better qualified to speak as to the building outlook than the brickmakers. It is to them that inquiries are first directed by people who contemplate building. In an interview yesterday, Mr. Skuse, a leading brick manufacturer, declared he had had as many inquiries this as in other seasons, and was quite satisfied with the outlook. It is said the price of brick will not vary greatly from that of last season. The supply promises to be large, and, judging from what manufacturers say, it would seem that London has every reason to look for at least one more good building season after the snow and frost leave the ground.

CHATHAM.

Chatham, Feb. 7.—Following on the annual meeting of the Board of Trade last week, the council held a meeting on Friday evening, when the committees were struck for the current year. W. H. Westman, chairman of the civic industrial committee, is, by virtue of holding that office, chairman of the same committee on the Board of Trade. A. D. Westman, also of Westman Bros., is a member of the mercantile committee, while C. S. Cornelius, manager of the new brass works, is on the manufacturer's committee.

* * *

It will be remembered that at the December session of the county council, a petition signed by a large number of retailers of all kinds throughout the county was presented, asking for increases in the licenses charged hawkers and peddlers. The petition was laid over till the January session. In the meantime, a counter petition containing upwards of a thousand names, was sent in, and as a result the new county council, at the session just closed, quietly shelved the whole matter without discussion.

* * *

The Chatham Motor Car Company, which started business in the fall of 1906, last week made an assignment to Barrister Ward Stanworth. The company did a good business during the past summer, and it is understood that the assignment was made to facilitate a reorganization, which has been in contemplation, when a large amount of capital and new blood will be injected into the concern. The creditors' meeting takes place here on Feb. 12.

* * *

Before leaving for Toronto last week to take a position in the hardware department of the R. Simpson Co., Limited, Burleigh Campbell, for several years past on the staff of W. C. Crawford's store, Tilbury, was presented by his fellow employes with a gold-headed umbrella. Mr. Campbell was also the recipient of a beautiful gold locket, suitably engraved, from the members of St. Francis' church, as a token of appreciation of his services in the choir.

* * *

The subject of house numbering throughout the city is once more agitating the council. For many years past the subject has been brought up at the beginning of every year by each new council, but just as regularly shelved. There is a steadily growing sentiment behind the movement, however, and this is especially strong among the merchants. Systematic numbering of houses would, it is needless to say, immensely facilitate the delivery of goods from the various stores, while it possesses other advantages, besides being an absolutely necessary feature of any up-to-date city. One firm alone has a standing offer of $25 towards the work, if it is taken up, which shows that the retailers appreciate the proposal.

* * *

Geo. Clements, of this city, left last week for Tilbury, where he has accepted a position with his brother in the Tilbury Iron Works.

* * *

It is understood that the National Supply Company intend moving the headquarters of their oil well supply business from Chatham to Tilbury.

INGERSOLL.

Ingersoll, Feb. 3.—An incident worthy of mention recently took place at the works of the John Morrow Machine Screw Co., Limited, when the employes gave a tangible expression of the high regard which they entertain for the president and manager, J. A. Coulter. The event well illustrates how an employer may win the good will and hearty co-operation of his workmen, and in this respect it has a broad significance, tending as it does, to cement the friendly relations between capital and labor. Mr. Coulter was induced to enter the works on the pretext that he was wanted to inspect a new machine. In accordance with the carefully laid plans, the

power by which the entire plant is operated, was turned off when he had reached the machine referred to. Mr. Coulter had no sooner expressed surprise at this unexpected happening than he was astonished to find himself surrounded by the employes. At this juncture one of the employes stepped forward and read an address expressing the kindliest sentiments and laying stress on their appreciation of having been furnished with steady employment, while the employes of establishments elsewhere had been thrown out of work. The kind consideration which had always been shown them and the generous manner in which they had been treated were also noted, and the employes hoped that they would continue to "make good." As a token of their appreciation and good will they presented Mr. Coulter with a handsome clock, which he no doubt will always cherish.

* * *

Trade has been well up to the average since the holiday season, despite the fact that a reaction is always anticipated. Local hardware merchants have given much attention to their windows, their displays consisting of seasonable articles for the most part and there has been a good demand for the sporting goods, such as skates, pucks, hockey sticks, etc. The comparatively mild weather which prevailed during January had a helpful influence on business as it enabled the country buyers to turn out regularly for purchases, and to complete much work on the farm which ordinarily would be delayed until later in the season, or probably overlooked entirely, if not commenced before the spring rush.

* * *

R. J. Robertson, who for a long period was successfully engaged in the hardware business here, has been appointed town treasurer in succession to the late A. N. Christopher. By reason of his long business career Mr. Robertson has an extensive acquaintance in the town and country and his selection for the important position met with the hearty approval of citizens generally. Mr. Robertson possesses splendid executive ability and in every respect is well qualified to discharge his duties satisfactorily. He assumed his duties the first of this month.

"NUWITE" PAINT.

"Nuwite" is the name of a new paint recently put on the Canadian market by the Benjamin Moore Co., Toronto Junction. The new paint is in the form of a thick paste and is made ready for use by the addition of turpentine. It is said that two coats of "Nuwite" will give as good an appearance to any inside work as three coats of other brands. The finish is soft and smooth, and has the flat effect of a water color. No dryer is needed for the new paint.

From Other Provinces

Fine Bank Building in St. John—Hardware Merchant Nominated for N.B. Legislature—Little Interest in Proposed Co-operative Act—Calgary Board of Trade Officers.

ST. JOHN, N.B.

St. John, Feb. 4.—Business continues quiet in hardware circles, both wholesale and retail, and there have been practically no changes in prices. The advent of snow has been welcomed by lumbering men, who were beginning to think they would not get their logs out of the woods.

* * *

With the thermometer registering 10 below zero on Friday last the plumbers were kept busy thawing water pipes.

* * *

Robt. Maxwell, carpenter and builder, and John E. Wilson, dealer in stoves, galvanized iron work and hardware, have been nominated as two of the four candidates to represent St. John in the opposition interests in the local Legislature. Mr. Maxwell has served a term already, and Mr. Wilson was a candidate on two previous occasions, being defeated by a small margin. It is the general opinion that their chances of success at the coming elections on March 3 are very bright.

* * *

Much sympathy is expressed for John Keeffe, manager of the James Robertson Co. here, whose eldest daughter, Miss Margaret, died after a brief illness, on Friday, Jan. 31.

* * *

The St. John Railway Company is having an artesian well bored in their property here, so as to be independent of the city water supply. A six-inch hole is being made and a depth of 34 feet has been reached. They expect to bore to a depth of 1,000 feet.

* * *

The Canadian White Company, of Montreal, have practically completed the new Royal Bank building, at the corner of Canterbury and King streets. There are a few small sub-contracts not yet finished, but with the completion of these, the premises will be ready to hand over to the bank authorities. The new building is a most commodious one and both in exterior appearance and internal finish is said to be the most modern and beautiful this side of Montreal. Work was commenced on the foundations on October 12, 1906, and operations have been going on with but little interruption ever since.

* * *

The Anderson Furniture Company, of Newcastle, is in financial difficulties, and Allan A. Davidson, barrister, has been appointed provisional liquidator by Judge Hammington, and on Feb. 11 at Moncton the matter will be further dealt with. This company, established by Ontario parties, was believed to have strong financial backing, and to be doing a good business. It got some valuable concessions from Newcastle. The liabilities are said to be about $40,000, with assets upwards of $90,000. The present intention is that the liquidator will continue the business and endeavor to sell it as a going concern.

HALIFAX.

Halifax, Feb. 1.—James W. Stairs died suddenly on Jan. 29. He was reading the morning paper, and his family were startled by his suddenly falling forward out of the chair. When picked up he was breathing his last, and although physicians were immediately called, he had passed away before they could respond. Since his twenty-first year he had been a partner in the firm of Stairs, Son & Morrow. About five or six years ago he retired from the firm, which then became a joint stock company, and since then he has conducted a general brokerage business. The deceased, who was in the 57th year of his age, was a son of the late Hon. W. J. Stairs, the founder of Stairs, Son & Morrow, and the late John F. Stairs was a brother. The surviving brothers of the deceased are Edward, George and Gavin, of this city, and Herbert, of Cornwallis.

CALGARY.

Calgary, Jan. 30.—The recent Board of Trade elections resulted as follows: Hon. president, Hon. W. H. Cushing; president, A. E. Cross; 1st vice-president, Wm. Toole; 2nd vice-president, T. J. S. Skinner; 3rd vice-president, A. T. Linton; secretary-treasurer, E. L. Richardson.

SASKATOON.

Saskatoon, Jan. 25.—Business at the stores continues to be quiet but hopes are entertained that things will soon begin to hum again. The dullest time of the year is now on but merchants are looking forward to the spring trade, and are making their plans accordingly. Most of the hardwaremen will lay in heavy stocks for the coming season, although some are pretty well stocked with certain lines left over from last year. Already several new buildings are in sight and others will follow as the season advances. The finishing touches are being put on the interior of three or four buildings, which could not be done earlier, by the painters, plasterers and plumbers.

* * *

The price of wheat has advanced slightly this week and deliveries at the local market continue fairly heavy. The subject of spring seed came before the board of trade and it is believed that little or no government relief will be required in this district: crops turned out well last year and seed in the farmers' bins is of good quality. The matter, however, will bear some investigation and a careful examination will be made regarding the fertility of the seed, for no farmer can afford to risk sowing seed which does not come up to the proper standard.

Modern Conveniences for Farm Homes

The Eighth of a Series of Articles Intended to Help Canadian Plumbers in Educating Residents in Country Districts to the Necessity of Better Sanitary Arrangements.

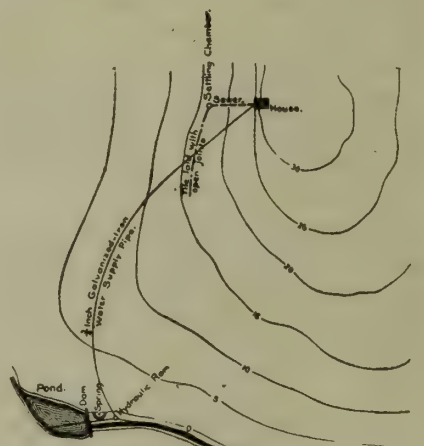
By Elmina T. Wilson, C.E.

EXAMPLES OF HOMES.

From the many country homes where advantage has been taken of improved appliances for comfort and the saving of labor a few have been selected as illustrations of the cost of introducing such conveniences. The cost has been furnished in each case by the owners.

One two-storey house of 8 rooms has a hot-air furnace, with registers in 7 rooms. A range was used in the kitchen, so no other heat was needed there. The furnace was furnished and installed for $150. The cost of the coal used in both range and furnace has averaged about $54 a year for the last four years. The following plumbing fixtures were set up, with complete supply and waste pipe connections as far as the outside of the house, for $180: In the bathroom, lavatory, bath tub, and water-closet; a lavatory in one bedroom; in the kitchen a sink and a 30-gallon range boiler; a cold water faucet in the laundry, and a sill cock for the hose outside the house.

A six-room cottage has a hot-air furnace, with registers in every room, which was furnished and installed for $133. From two rooms the heat is shut off part of the time, and coal is not used in the kitchen range. The cost of the coal per year has been $36. Water is supplied to the plumbing fixtures through a tank in the attic. The cost of the attic tank, the bathroom fixtures, which consist of bath tub, lavatory, and water-closet; the kitchen sink and hot-water heating tank, with connections to walls of house, was $115.



A home in central Iowa has a pneumatic tank 8 feet long and 30 inches in diameter in the cellar. This tank is supplied with water and some air by a windmill, erected in common with two neighbors, There is in the cellar a smaller tank of 66 gallons' capacity, connected by a hand force pump to the rain-water cistern. Three or four minutes' pumping with the hand pump every day supplies a good pressure on the cistern water. The soft water tank supplies a 30-gallon hot-water boiler, which is connected with a hot-water coil in the furnace and with a gasoline heater in the cellar. The plumbing fixtures consist of a sink in the kitchen and a bath tub, lavatory, and water-closet in the bathroom. Each fixture has three faucets, containing, respectively, cold well water, cold cistern water, and hot cistern water. The three pipes are run to the laundry and faucets set. The cost of the entire plumbing, including connections to windmill and to rain-water cistern, hand pump for cistern, steel tanks and all, but not including a share of the windmill and deep well, was $300. The heating system consists of a hot-air furnace with registers in every room, there being nine rooms and halls in the house, including kitchen and third-storey room, and cost $200 to install. The average cost of fuel per year is $75.

A five-room cottage is heated with a hot-water system installed by the owner. The cost of material and fittings was under $200. In four years the additional cost for repairs has been $20.65. The whole house is kept at about 70 degrees Fahr., and the cost for soft coal has never exceeded $38.50 for the whole firing season.

The advantage in the hot-water system is in the fact that the water begins to circulate through the pipes as soon as the fire is built and the radiators will retain heat from five to ten hours after the fire is out.

The first-floor rooms of one home are heated by using a large wood stove in the cellar. This stove is large enough to take cord wood in full length. It is walled in with brick, and pipes lead from this hot-air chamber to the various rooms. This method gives "splendid satisfaction."

A furnace with six registers was put into an old two-storey house at a cost of $125. One of the old chimneys was used for a fireplace. The grate and the tile front cost $17, and a carpenter put in the wooden frame and mantel shelf for $10. The cost of the coal per year is from $43 to $50.

GENERAL PLAN OF GROUNDS.

Fig. 21.—Water supply and sewage disposal for a small farm.

Figure 21 shows a plan of the water-supply and sewage-disposal system for a cottage near Chappaqua, N.Y. By building a stone dam about 30 feet long, a brook was made to give a head of 6 feet 2 inches for a compound ram located a few feet below the dam. The water from above the dam flowing through the drive pipe forces spring water through 650 feet of ¾-inch pipe to a 65-gallon galvanized iron tank in the attic of the cottage, at an elevation of 87 feet above the ram. The overflow from this tank wastes into the drain for the rain water leaders. Water is piped from the attic tank to the bath tub, lavatory and water-closet tank in the bathroom and the sink and 30-gallon hot-water boiler in the kitchen. The boiler is connected to a water back in the kitchen range and hot water is piped to the kitchen sink, to the bath tub, and lavatory. One line of soil pipe collects all the liquid wastes. About 10 feet outside the foundation wall this cast iron soil pipe connects to a 4-inch vitrified pipe sewer, leading to a 50-gallon settling chamber, 75 feet from the house. The effluent from the settling chamber is emptied into a line of 4-inch drain tile laid with open joints and with a very slight fall, about 10 inches below the surface of the ground.

AN EARLY EYE FOR BUSINESS.

Thomas J. Drummond, the new president of the Montreal Board of Trade, is one of a family of successful manufacturers and merchants. Not only have they been unusually successful and attained an influential and prominent position in Montreal, but their success has also not lost them any of their old friends.

The new president even as a boy had an eye to business. There was a cat show in Montreal and a handsome prize was to be awarded to the best collection of felines. Mr. Drummond read the announcement and with his brother George, the former president of the Manufacturers' Association, and one or two other boys, they secured a big packing case from Greenshields' Dry Goods Store and nailed rough wooden slats on the front. Each contributed his own family cat and then stealthily visited the homes of all their neighbors and secured about forty representatives of all kinds, all of them mongrels. They had the largest collection at the show, but it was a motley group and it kept the boys busy separating the fighting cats. Much to their disgust, the judges refused to award them a prize. The boys made such an aggressive row about it that to keep them quiet the committee gave them $2 and ordered them to remove their cats. The packing case was taken up the lane behind Victoria Rink and the cats liberated—the most of them the worse for wear, and many of them their owners could not recognize. The two dollars was spent on ice cream.

The nitro-glycerine mixer at the Ontario Powder Works, Tweed, exploded Tuesday, doing great damage to the buildings in Tweed. The men at the works had a few minutes' warning and ran to places of safety. Almost every house in Tweed is damaged in some manner, the stores having their plate glass fronts completely destroyed. The buildings of the power plant are mostly flattened to the ground, and the building of the Steel Trough and Machine Company, near by, was greatly damaged. The loss on plate glass and other glass in the town is estimated at $1,000 or over.

Words of Wisdom

to

Manufacturers

¶ The Manufacturer who sells his product through dealers, no matter how much magazine and newspaper advertising he may do, cannot afford to ignore the trade journals. The idea that if a general demand is created, the dealer will be forced to carry the goods is all right in theory, but the trouble is that it doesn't work out in practice. The dealer is likely to carry such brands of different articles as suit him, and if he hasn't what people ask for, the people will take what he has. As a matter of fact, the number of those who ask for a certain brand, and refuse all others, is very, very limited. This means that the manufacturer must advertise to the dealer as well as to the consumer. To convince the latter that it is worth while to buy a certain brand is only half the battle. The other half consists in convincing the dealer that it is worth his while to carry the brand. This is best accomplished through the trade newspapers.—*Profitable Advertising.*

Hardware Letter Box

Any questions on trade subjects will be answered by the editor in this department. Do you want any address, any special line of goods, anything relating to the hardware trade? Ask us. Letters from manufacturers, jobbers, travelers, retailers or clerks are solicited. Suggestions for trade improvement or discussions on trade evils are invited.

Horseshoes.

Whyte, Orr & Welles, hardware merchants, Daysland, Alberta, write: "Will you kindly give us the name of some manufacturer of snowshoes Nos. 0 and 1. We have been trying for two years to get some No. 0 snowshoes without any result.

Answer.—The Montreal Rolling Mills Co., Montreal, manufacture the line wanted, and the Belleville Rolling Mills Co., Belleville, will start their manufacture in the near future.—Editor.

Shelf Boxes.

The Purdom, Gillespie Hardware Company, London, write: "Can you send us the address of firms manufacturing shelving and boxes for an up-to-date hardware store?"

Answer.—Cameron & Campbell, Toronto, manufacture the Bennett Steel Shelf Box, which is in use in most large retail establishments in Canada.—Editor.

Washing Machines.

John Lawrence & Son, Killarney, Man., write: "Who handles the Vollmar Washing Machine and where is it manufactured?"

Answer.—It is handled in Winnipeg by the McClary Manufacturing Company, and is made in London, Ont., by Workman & Ward.—Editor.

MONTREAL BOARD OF TRADE.

The following have been elected members of the Montreal Board of Trade Council for the year: J. R. Kinghorn, representing iron and steel; J. S. N. Dougall, paints and varnishes (re-elected); Alex. McLaurin, lumber; Alex. Orsali, groceries (re-elected); A. A. Ayer, butter and cheese, (re-elected); Norman Wright, grain; R. W. Reford, shipping; D. C. Macarow, banking; N. Hanson, finance and investments: J. H. Burland, pulp and paper; W. Agnew, dry goods; and J. P. Mullarkey.

The Board of Arbitration was elected as follows: George E. Drummond, iron and steel (re-elected); George Caverhill, hardware; Jas. Carruthers, grain (re-elected); C. B. Esdaile, grain; W. I. Gear, shipping (re-elected); E. B. Greenshields, dry goods (re-elected); Sir George Drummond, president Canada Sugar Refining Co. (re-elected); John McKergow, dairy produce (re-elected); Alex. McFee, grain (re-elected); A. J. Hodgson, dairy produce (re-elected); Edgar Judge, grain; James Alexander, dairy produce.

Self-made men always make a loud noise when they talk.

CONDENSED OR "WANT" ADVERTISEMENTS.

RATES.

Two cents per word first insertion; one cent per word subsequent insertions.

Five cents additional each insertion where box number is desired.

Contractions count as one word, but five figures (as $1,000) are allowed as one word.

Cash remittances to cover cost **must** accompany all advertisements. **In no case** can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

RULES FOR COPY.

In addressing replies care of HARDWARE AND METAL don't fail to give box number.

Replies addressed to HARDWARE AND METAL boxes are re-mailed to advertisers every Monday, Wednesday and Friday.

Requests for classification will be followed where they do not conflict with established classified rules.

Orders should always clearly specify the number of times the advertisement is to run.

All "Want" advertisements are payable in advance.

AGENTS WANTED.

This is the problem of many manufacturers who are anxious to get a foothold in Western Canada. It will be easily solved if HARDWARE AND METAL is given the opportunity to solve it.

AGENT wanted to push an advertised line of Welsh tinplates; write at first to "B.B.," care HARDWARE AND METAL, 88 Fleet St., E.C., London, Eng. [tf]

TILES—Plain enamelled, decorated majolica, ornamental, rough surface, and many other kinds, suitable for walls, hearths, furniture backs, dadoes, radiator recesses, etc. Messrs. J. H. Barrett & Co., Ltd., Stoke-on-Trent, England, are open to appoint agents in Toronto, Montreal, Winnipeg, Ottawa, Hamilton, London, Ont. [5]

FIRST-CLASS English firm, manufacturing A1 line of metal polish, wishes to secure Canadian agents for Maritime Provinces, and Western Canada. Have already secured agents for Ontario, who have handled their line for nearly a year, and have found it very ready seller. For full information apply Box 690, HARDWARE AND METAL, Toronto. (4tf)

LONDON, ENG., firm of iron, steel, tinplates, etc., merchants are open to appoint an agent on commission. Address Mercator, care HARDWARE AND METAL, 88 Fleet St., London, Eng. (6)

AGENCY WANTED.

WANTED ONTARIO AGENCY for stoves, hardware specialties, refrigerators, metal beds, etc., manager of a large manufacturing establishment is opening an office and sample room with storage facilities in Toronto, March 1st; has large experience, thoroughly acquainted with the trade, two traveling salesmen, and out for business. Will be pleased to interview or correspond with any firms open to be represented in above lines in Toronto and Ontario on commission. Address S. & Co., HARDWARE AND METAL, Toronto. (9)

ARTICLES FOR SALE.

Don't keep any fixtures or tools around your store for which you have no further use. They are worth more to-day than they will a year hence. Don't keep money tied up which you could use to secure discounts from your wholesaler.

FOR SALE—Stock of cut nails, sizes 60D to 3D no 40D or 4D in stock; stock in first class order; price $2 base, F.O.B. Paisley. A. Sinclai; Estate, Paisley, Ont. [5]

FOR SALE—Set of tinsmith's tools complete; great bargain for cash. For particulars write. W. A. Matthews, Cannington. (4)

QUANTITY of black sheet steel 16 gauge from 30x72 to 60x96; galvanized up to 42x96. W. S. Gordon, Tweed, Ont. (6)

FOR SALE—Set of tinsmith tools complete, great bargain for cash. For particulars write Box 132, Vankleek Hill, Ont. (7)

BUSINESS WANTED

WANTED—Good live hardware business in Ontario, city or town preferred. Box 677, HARDWARE AND METAL, Toronto. (2)

BUSINESS CHANCES

FREE OFFER TO TINSMITHS—Can you draw the pattern of a square mitre for an O.G. eave trough? If not send for full particulars regarding our sheet metal pattern course and we will send you free drawing and instructions showing how to draw the pattern for a square mitre. Address the Sheet Metal School, Box 419, Galt, Ont. (5)

HARDWARE, stove and tin business in one of the best manufacturing towns in Ontario; stock nine thousand; clearing two thousand yearly. Principals only dealt with. Address Box 693, HARDWARE AND METAL, Toronto. (8)

HARDWARE business for sale in live town near Toronto; established over 30 years; includes store building and tinsmithing department; good reasons for selling. Box 686, HARDWARE AND METAL, Toronto. [8]

WANTED—Good live hardware business in Manitoba, Saskatchewan or Alberta. Owners only. Box 22, HARDWARE AND METAL, Winnipeg. (10)

HARDWARE, stove and tinsmithing business; the best in this section; established over 35 years; reasons for selling, death of proprietor. Box 692, HARDWARE AND METAL, Toronto. (6)

FOR SALE—A well-established hardware, tinware and furniture in a good town in Ontario; stock about $6,000; yearly turnover about $16,000; satisfactory reasons for selling. Apply Box 681, HARDWARE AND METAL, Toronto. (8)

FOR SALE OR RENT—Well-established hardware, tinsmithing, roofing and furnace heating stand without stock in a small town situated in a rich farming community in Eastern Ontario, five minutes walk from G.T.R. station acytelene gas and hot air heating plants, also good dwelling in connection. For particulars apply to D. Courville, Vankleek Hill, Ont. (7)

SITUATIONS VACANT.

You can secure a "five-thousand-a-year" manager, or a "five-hundred-a-year" clerk, by stating your wants under "Situations Vacant."

HARDWARE salesman wanted—Give age, experience, and all particulars. J. S. Moir, Arnprior, Ont. (8)

TRAVELING position wanted by hardwareman, seven years wholesale experience; 5 years' experience on road; best references. Box 687, HARDWARE AND METAL, Toronto. (6)

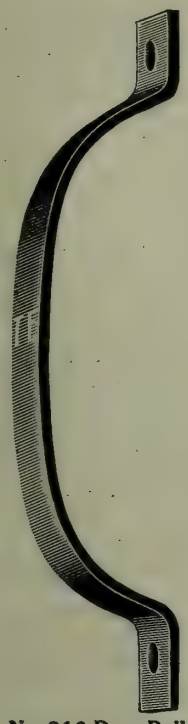
SITUATIONS WANTED.

Travellers, clerks, or tinsmiths, wishing to secure new positions, can engage the attention of the largest number of employers in their respective lines, by giving full particulars as to qualifications, etc., under "Situations Vacant."

WANTED — Position as foreman tinsmith and plumber; would take an interest. Box, 683 HARDWARE AND METAL, Toronto. [4]

WANTED—Position as foreman tinsmith; 18 year's experience; can do plumbing, lead or iron pipe. Box 685, HARDWARE AND METAL, Toronto. (5)

WANTED—Position as hardware clerk: good references. Apply Box 165, Wolseley, Sask. [7]



TINSMITH wanted for Manitoba, experienced in bench and sheet metal work, furnace work; eavetroughing and roofing, pipe-fitting and work usually done in a country shop; must be a worker and regular in habits; state wages and experience. Address Box 691, HARDWARE AND METAL, Toronto. [7]

WANTED by March 1st, position as hardware clerk. Six years' experience, wholesale and retail. A1 references from present and former employers. Box 10, HARDWARE AND METAL, Union Bank Building, Winnipeg. (2)

MANITOBA HARDWARE AND METAL MARKETS

Corrected by telegraph up to 12 noon Friday, Feb. 7, Room 511, Union Bank Bldg, Winnipeg, Man.

Wire—Barbed wire, 100 pounds, $3.25; plain twist, $3.40; staples, $3.40; annealed wire, $2.90 base; oiled, 10c extra; bright iron, $3.10 base; brass spring wire, 32c base; plain galvanized wire, 6, 7 and 8, $3.70; No. 9, $3.25; No. 10, $3.70; No. 11, $3.80; No. 12, $3.45; No. 13, $3.55; No. 14, $4.10.

Poultry Netting—The discount is 57½ per cent.

Horseshoes—Iron, No. 0 to No. 1, $4.65; No. 2 and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to No. 1, $5; No. 2 and larger, $4.75.

Horsenails—No. 10 and larger, 22c; No. 9, 24c; No. 8, 24c; No. 7, 26c; No. 6, 28c; No. 5, 30c; No. 4, 36c per lb. Discounts; "C" brand, 40, 10, 10 and 7½ p.c.; "M.R.M." cold forged process, 50 and 10 p.c. Add 15c per box. Capewell brand, quotations on application.

Wire Nails—$3 f.o.b. Winnipeg, and $2.55 f.o.b. Fort William.

Cut Nails—Now $3.20 per keg.

Pressed Spikes—¼ x 5 and 6, $4.75; 5-6 x 5, 6 and 7, $4.40; ⅜ x 6, 7 and 8, $4.25; 7-16 x 7 and 9, $4.15; ½ x 8, 9, 10 and 12, $4.05; ⅝ x 10 and 12, $3.90. All other lengths 25c extra, net.

Screws—Flat head, iron, bright, 80, 10, 10 and 10; round head, iron, 80; flat head, brass, 75; round head, brass, 70; coach, 65.

Nuts and Bolts—Bolts, carriage, ⅜ or smaller, 60 and 5 per cent.; bolts, carriage, 7-16 and up, 55; bolts, machine, ⅜ and under, 60 and 5; 7-16 and over, 55; bolt ends, 52½; sleigh shoe bolts, ⅜ and under, 55; 7-16 and over, 45; machine screws, 60; plough bolts, 50; square nuts, cases, 2½, small lots, 2¼; hexagon nuts, cases, 2½; small lots, 2¼; stone bolts, 70 and 10 per cent.

Rivets—Iron, 60 and 10 per cent.; copper. No. 7, 36½c; No. 8, 37½c; No. 9, 38c; No. 10, 40c; No. 12, 43c. Assorted, No. 8, 38½c and No. 10, 41½c.

Green Wire Cloth—$1.75 per 100 square feet.

Coil Chain—¼-in., $7.25; 5-16, $5.75; ⅜, $5.25; 7-16, $5; ½, $4.75; 9-16, $4.70; ⅝, $4.65; ¾, $4.65.

Shovels—Discounts are 40 and 5 p.c.

Harvest Tools—50, 10 and 5 p.c.

Axe Handles—Turned, s.g. hickory, $3.15; No. 1, $1.90; No. 2, $1.60; octagon, extra, $2.30; No. 1, $1.60.

Axes—Bench axes, 40 and 5; broad axes, 25 per cent. discount off list; Royal Oak, per doz., $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.50; Copper King, $8.25; Columbian, $9.50; handled axes, North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.75; Copper King, $10.50 per dozen.

Auger Bits—"Irwin" bits, 47½ per cent., and other lines, 70 and 10 per cent.

Blocks—Steel blocks, 35; wood, 60.

Hinges—Light "T" and strap, 65.

Hooks—Brush hooks, heavy, per doz., $8.75; grass hooks, $1.70.

Files—Arcade, 75; Black Diamond, 60; Nicholson's, 62½ per cent.

Locks—Peterboro and Gurney 40 p.c.

Stove Pipes—6-in., per 100 feet length, $9.25; 7-in., $10.

Tinware, Etc.—Pressed, retinned, 70; pressed, plain, 75 and 2½; pieced, 25; japanned ware, 35; enamelled ware, Famous, 50; Imperial, 50 and 10; Imperial, one coat, 60; Premier, 50; Colonial, 50 and 10; Royal, 60; Victoria, 45; White, 70 and 5; Diamond, 50; Granite, 60 per cent.

Galvanized Ware—Pails, 37½ per cent.; other galvanized lines 33 1-3 per cent.

Solder—Quoted at 27c per pound.

Lanterns—Cold blast, per dozen, $7; coppered, $9; dash, $9.

Churns—45 and 5; list as follows: No. 0, $9; No. 1, $9; No. 2, $10; No. 3, $11; No. 4, $13; No. 5, $16.

Wringers—Royal Canadian, $36; B.B., $40.75 per dozen.

Lath Yarn—10½c.

Rope—Sisal, 10½c per pound, and pure manila, 14½c. British manila, 11½c.

Building Paper—Anchor, plain, 66c; tarred, 69c; Victoria, plain, 75c; tarred, 88c; No. 1 Cyclone, tarred, 84c; No. 1 Cyclone, plain, 66c; No. 2, Joliette, tarred, 69c; No. 2, Joliette, plain, 51c; No. 2 Sunrise, plain, 56c; Jubilee plain, 75c; Jubilee tarred, 88c; Buffalo plain, 66c; Buffalo tarred, 69c; Lion plain, 55c.

Corrugated Iron and Roofing, Etc.—Corrugated iron, 28 gauge, painted, $3; galvanized, $4.10; 26 gauge, $3.35 and $4.35. Pressed standing seamed roofing, 28 gauge, $3.45 and $4.45. Crimped roofing, 28 gauge, painted, $3.20; galvanized $4.30; 26 gauge, $3.55 and $4.55.

Ammunition, Etc.—Cartridges, rim fire, Canadian, 50 per cent.; American, 33 per cent.; pistol sizes, Canadian, 25 per cent.; American, 5 per cent.; military, Canadian, 20 per cent. off. American, 10 per cent. advance. Primers, $1.55. Loaded shells: English and Canadian makes, 12 gauge black soft, $18; 10 gauge, $22.50; 12 gauge smokeless, chilled, English, $24; Canadian, $23; 10 gauge smokeless, chilled, English, $28; Canadian, $27. Shot: Drop, per 100 lbs., $6.75; chilled, $7.15; buck, $7.55; 28 ball, $7.95. Powder: F.F., keg, Hamilton, $4.75; F.F.G., Dupont's, $5.

Iron and Steel—Bar Iron basis, $2.70. Swedish iron basis, $4.95; sleigh shoe steel, $2.75; spring steel, $3.25; machinery steel, $3.50; tool steel: Black Diamond, 100 lbs., $9.50; Jessop, $13.

Sheet Zinc—$8.50 for cask lots, and $9 for broken lots.

Pig Lead—Average price is $6.

Lead Pipe—Quoted at $7.25.

Copper—Planished copper, 33½ per pound; plain, 28½c.

Iron Pipe—Black pipe, ¼-in., $2.70; ⅜, $2.85; ½, $3.75; ¾, $4.75; 1, $6.75; 1¼, $9.25; 1½, $11; 2, $14.80; 2½, $24.60; 3, $32.30; 3½, $40.50; 4, $46; 4½, $54. Galvanized: ¼-in., $3.65; ⅜, $3.80; ½, $4.50; ¾, $5.80; 1, $8.40; 1¼, $11.40; 1½, $13.80; 2, $18.40.

Fittings—Wrought couplings, 55 per cent.; nipples, 70 per cent.; classified malleable fittings, 25 per cent.; malleable bushings, 50 per cent.; malleable unions, 55 per cent.

Galvanized Iron—Apollo, 16-gauge, $4.15; 18 and 20, $4.40; 22 and 24, $4.65; 26, $4.65; 28, $4.50; 30-gauge or 10¾-oz., $5.20; Queen's Head, 20, $4.60; 24 and 26, $4.90; 28, $5.15.

Tin Plates—I.C. charcoal, 20x28, box, $10; IX charcoal, 20x28, $12; XXI charcoal, 20x28, 14.

Terne Plates—Quoted at $9.50.

Canada Plates—18x21, 18x24, $3.50; 20x28, $3.80; full polished, $4.30.

Lubricating Oils—600 W. cylinders, 80 cents; Maple Leaf cylinder, $1 per gal.; 700 A. cylinder, 75c; Sterling cylinder, 55c; 600 A. cylinder, 50c; Capital cylinder, 59c and 54c; Solar red engine, 32c; Atlantic red engine 29c; heavy castor, 29c; medium castor 28c; Ruddy harvester 30c; standard gas engine oil 30c; Renown engine oil, 38c.

Petroleum and Gasolene—Silver Star, in bbls., per gal., 20c; Sunlight, in bbls., per gal., 22c; per case, $2.45; Eocene, in bbls., per gal., 24c; per case, $2.60; Pennoline, in bbls., per gallon, 25c; Silver Light, 22c; Starlight, 20c per gal.; Sterling Light, 24c per gallon. Engine gasolene, in barrels, gal., 25½c, f.o.b. Winnipeg, in cases, $2.60.

Bluestone—7c lb.

Paints and Oils—White lead, pure, $6.50 to $7.50, according to brand; bladder putty, in bbls., 2½c; in kegs, 2¾c; turpentine, barrel lots, Winnipeg, 71½c. Linseed oil, raw, Winnipeg, 66c; Calgary, 77c; Lethbridge, 77c; Edmonton, 78c; boiled oil, 3c per gallon advance on these prices.

MARKET FOR OLD HORSESHOES.

One of the constantly growing imports into the Chinese Province of Shantung through the port of Tsingtau is old horseshoes. One steamer alone in November carried 300 tons of this scrap iron from Hamburg. The market for these worn-out shoes seems to be almost without limit. Chinese iron dealers buy the horseshoes and sell them to knife and tool manufacturers all over the province. It is claimed by the Chinese that the temper of this class of iron makes it the best obtainable for knives and cutlery, and also good for other tools. The reason ascribed for this is that the constant beating the shoes have received under the feet of horses has given them a peculiar temper absolutely unobtainable in any other way, and that tools made from them are superior to all others.

"WHITE FROST" REFRIGERATORS

The "White Frost" sanitary refrigerator has won popularity strictly on merit. It is the latest evolution in sanitary refrigeration. Besides its circular form, the ease with which it can be handled, and its handsome appearance at once attract the housewife. The "White Frost" is built of steel—cold rolled sheets and between the sheets is a lining of maltha and asbestos, the two greatest non-conductors of heat known and refrigeration is dry and perfect. Being circular there are no corners and it can be thoroughly washed out in a very few minutes as the shelves revolve. Inside, as well as outside, the "White Frost" is coated with baked-on white enamel. It is the pioneer in the metallic refrigerator line and it is not an experiment, as the theoretical and experimental stages were passed years ago.

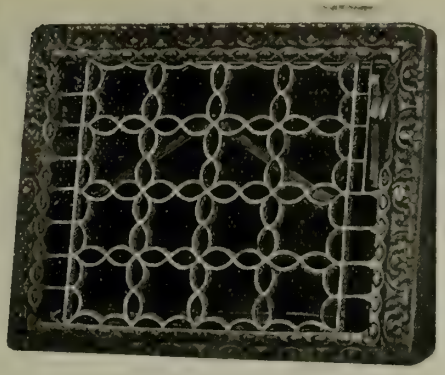
TO MAKE AN IDEAL PAINT

that will stand the trying weather conditions of Western Canada has been our object.

Stephens' **HOUSE PAINT**

is our attainment—it is right because

IT covers wears looks **WELL**



It is always in stock!

You would have no difficulty in proving this, by ordering at once any of the numerous shades. It is a paint that has become a favorite with hundreds of retailers, because it has always pleased their customers.

Practical Talks on Warm Air Heating

The Thirteenth of a Series of Articles by E. H. Roberts.

It is estimated that in the state of Pennsylvania alone there are over 23,000 one-room school buildings heated by stoves and with absolutely no provision for ventilation or the introduction of pure air except by opening doors or windows. Ohio has 12,000 such school buildings and Minnesota must have five

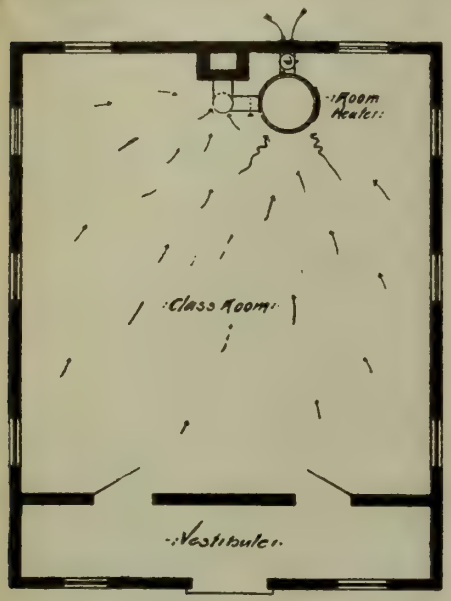

Fig. 1.

or six thousand at least. That the lack of ventilation in these country schools is largely responsible for the spread of contagious diseases and especially tuberculosis is a fact too well known to need argument. The question is, how can pure, warm air be supplied at a reasonable cost in buildings constructed without any regard to ventilation and in districts where an elaborate heating and ventilating plant would be too expensive for serious consideration.

Minnesota's Legal Requirements.

It seems to us the state department of instruction for Minnesota have taken a very sensible position by making certain requirements in the heating and ventilating a necessary qualification for state aid. The following is an excerpt from the circular issued by the department indicating the minimum provision along these lines that will be acceptable to them:

"The department does not wish to be understood to require any one particular system of heating and ventilating school buildings. It does require, however, that a district desiring special state aid must provide some suitable system, which, if not already in use, must be put in before December 1st of this year. The application must indicate definitely the system in use and unless this meets with the approval of the county superintendent and of this department the aid will not be granted.

"Heating by stove not enclosed, placed in the body of the room, and ventilating by door and windows only, will be regarded as inadequate. The application must show that proper provision has been made for admitting a sufficient quantity of fresh air in such a way that it is heated before being thrown into circulation in the school room; and that the foul air is drawn off from near the floor through a shaft of sufficient size and adequately heated to create a current for this purpose. This is very important.

"The duct for admitting fresh air for each room must be not less than eight inches in diameter or have a square surface of at least fifty inches. The outlet for impure air must have a diameter of not less than ten inches, or a square surface of not less than eighty inches. This is the minimum requirement and has general reference to a school with not more than twenty-five pupils. Where the attendance is larger, the size of the fresh air duct and outlet for impure air must be larger. It is to be observed that in every case the impure air must be drawn off through a duct or outlet that is sufficiently heated. Attempts to ventilate through an outlet that is not heated will in no case be approved nor will such a school be granted special state aid. Absolutely definite rules cannot be made as to exact device that will answer for heating and ventilation, nor as to the size of the fresh air intake and foul air outlet. The requirements stated above indicate the minimum that will be approved."

It is certainly a matter for congratulation that the school authorities have wakened up to the importance of providing for pure air and proper sanitary conditions in our school buildings and we do not doubt that the time is not far distant when a thorough system of ventilation will be considered just as important and just as necessary as desks or blackboards.

The Plans Shown.

Drawing No. 1 is the floor plan of a one-room school house without basement, showing location of room heater and in a general way the circulation of the air.

Of course the exact location of the heater is not essential, so long as it is sufficiently out of the way and where the outside fresh air pipe can be conveniently attached.

In this case the fresh air pipe is shown coming in through foundation wall under floor, then turning up with an elbow and connecting with casings about eight inches above base ring. This arrangement allows for a damper in fresh air pipe outside jacket of heater and is

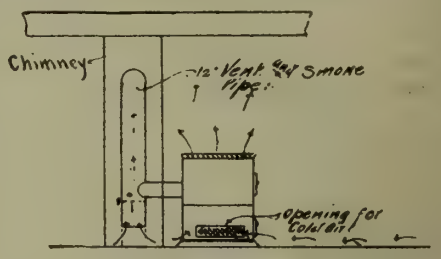

Fig. 2.

therefore more convenient than a pipe coming up inside casings where it would be difficult to get at the damper to open or close the fresh air supply.

The room heater is intended to set on legs that raise it about five inches above the floor line so as to ensure a circulation of air under the base ring and ash pit, and as an additional air supply from inside there shoud be openings in the lower part of casings as shown in drawing No. 2. These openings and the space between the base ring and floor should have a combined area of from 300 to 600 inches according to the size of the heater and the size of the room to be heated.

The Ventilating Pipe.

The ventilating pipe shown on detail is ten or twelve inches in diameter and

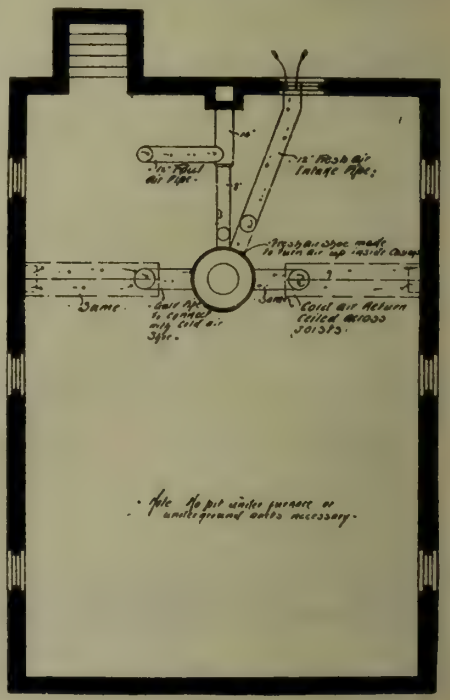

Fig. 3.

extends from the flue opening of chimney to a point about eight inches above

the floor resting on supports made of wrought iron or steel. The smoke pipe tees into the vent pipe at right angles and a damper should be placed in the vent pipe just below the smoke tee to close off the ventilation when school is not in session.

A room heated in the manner we have just described is infinitely more healthful than one heated by an ordinary stove and is certainly a great deal more comfortable for the pupils, as with the room heater the temperature of the air is practically the same in every part of the building whereas a stove will fairly roast the pupils near it, while the ones in the farther corners are freezing.

Drawings 3 and 4 are plans of a school building having a basement or at least an excavation underneath so

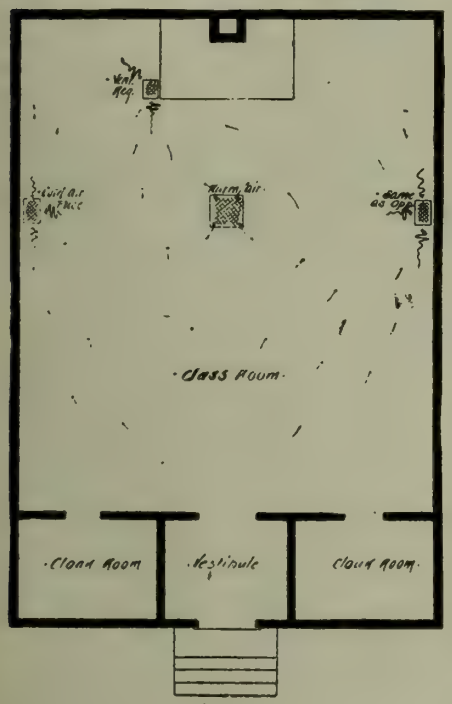

Fig. 4.

as to make the installation of a regular furnace possible.

Single Warm-air Register.

A single warm-air register is here indicated directly over the furnace. but two or more smaller registers can be substituted if preferred, the advantage of the single warm-air connection being less loss of heat in transmission and a greater rapidity of air circulation.

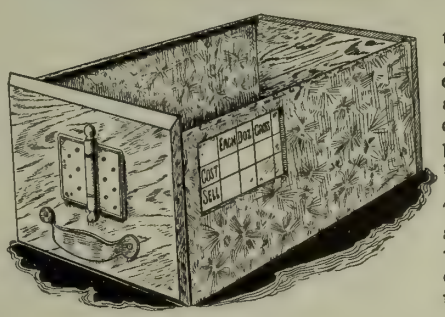
The foul air register is shown near platform, but this of course can be placed elsewhere if more convenient, and the vent pipe connects in basement with the smoke pipe of furnace in the manner shown on basement plan, the smoke pipe being enlarged at the point of union to the full capacity of both smoke and ventilating pipes.

In order to secure an even temperature in every part of the school room under all sorts of outside atmospheric conditions it is advisable to provide inside circulation unless the ventilating facilities are considerably greater than exist in most school buildings of this

Include Profitable Specialties in your Stock Order this Spring.

There's good profit in Specialties. And there is no limit to the sales you can make if you push them enthusiastically. Scarcely a home but what has more or less worn Furniture, Shelving, Picture Frames, Screens, Porch and Lawn Furniture, Radiators, Piping and Fixtures, Stove Pipes, Wickerwork, Tools and other little things which they would be glad to brighten up on suggestion from you how to do it at small cost.

Talk specialties and advertise them in your newspapers. Put specialties in your windows and display them prominently in your store. Here are a few of the best sellers.



S-W. Family Paint—A handy paint for household use.

SOLE MANUFACTURERS:

Cameron & Campbell, - Toronto, Ontario

character and a circulating system of some kind is really a necessity in this climate anyway, as the expense of heating with all outside air twenty-four hours in the day is almost prohibitive.

The Cold Air Faces.

The cold air faces on first floor plan are shown near outside walls, where it is usually most convenient to have them and the air from class room circulates through these into the spaces between joists which are ceiled across at bottom and on to the flange collars indicated by circles where round galvanized pipes attach to connect with cold air shoes at bottom of casings.

The outside fresh air intake pipe extends from the most convenient basement window overhead to a point near furnace then drops obliquely to connect with cold air shoe at back of casings and eight or ten inches above the base ring. The cold air shoe for outside air differs from the return cold air shoes only in having a box projection inside the castings to force the air upward, thus doing away with any possible interference with the inside circulation.

One very essential and necessary condition for the successful operation of either the room heater or the furnace plant described above is a chimney flue large enough to carry the required ventilation and also the smoke products. Twelve inches square inside measure is about as small as is practicable for a school room seating twenty-five or thirty pupils, but for a larger building the flue should be at least twelve by sixteen.

WELSH TIN-PLATE TRADE.

Considerable excitement has been occasioned on the Walsh tin plate market through an offer made by an American company of 3,000 tons per month of steel bars for use in the manufacture of tin plates. The offer was made at a figure equal to $26.15 per ton f.o.t. in Welsh ports, but this is considered excessive by local users. Steel bar producers in Spain are constantly seeking an opportunity to introduce their merchandise and to capture at least a share of local orders. However, according to analysis, the Spanish steel is not yet regarded as suitable for the manufacture of tin plates. The requisite quality is well understood by American manufacturers, because in preceding years they have supplied the requirements of some local factories and experience thus gained would make it superfluous in this report to go into the qestion of assay.

The total quantity of steel bars used in the local tin plate industry for 1907 up to middle of December was close to 800,000 tons representing a value of about $20,000,000. This steel is produced in Wales and the South Wales Siemens Steel Makers' Association, established in 1906, produced the bulk of the above quantity,

As far as orders for tin plates are concerned the trade in Wales is brisk, but prices obtained are considerably lower; however, were the costs of the raw material less inflated the outlook to the Welsh manufacturer would be at least gratifying. The tin ingot is a peculiar market, governed by a few. Other materials, including coal, are very high, the latter being easily 30 per cent. above normal.

The success of the Welsh manufacturer in being able to keep his factory in complete operation and at the same time combat the present inflated prices of goods necessary for his business is attributed to: First, carefully economizing in every branch the cost of production; second, particular attention to all suggested improvements; third, vigilant attention to the demands and requirements of the new markets in China, Japan, India and Australia. In the mills, extreme care is exercised in every way to minimize loss, and the steel bars are invariably cut with such precision as to make "bar ends" as light as possible, while there is very little scrap at the shears. Every boiler used for steam generating is fitted with forced draft appliances and the steam pipes are always covered with an asbestos mixture. All this means economy.

During recent years the finishing departments, particularly the tin house, have been revolutionized. A new patent riser and lister is now perfected and being introduced and will be an important improvement, capable of producing a better surface to the finished article and at considerably less cost.

FOUNDRYMEN'S CONVENTION.

A meeting was recently held to make preliminary arrangements for the convention of the American Foundrymen's Association, which is to be held in Toronto during the second week of June. The meeting was called by L. L. Anthes, vice-president of the American Foundrymen's Association, and the different organizations and bodies interested in this convention were represented. The exhibits will probably be made at the Toronto Exhibition grounds, $12,000 being spent by the association last year in the mere placing and arranging of the exhibits, and altogether over $40,000 was spent by the exhibitors and the association.

Canadian foundrymen should take advantage of this opportunity to make themselves familiar with the recent advances in foundrymen's machinery and supplies, and in the advances in the methods of manufacture, as will be brought out in the papers presented at the convention, and by the large exhibits. Affiliated with the American Foundrymen's Association are the Brass Founders' Association, and the Associated Foundry Foremen's Association. The Brass Manufacturers' Association has expressed a desire to visit Toronto at the time of the convention.

Any suggestions from any of the foundrymen or foundry foremen throughout Canada which might be of help to the committee, which is now being drawn up, in making arangements for the convention in June, will be very much appreciated by this committee, of which L. L. Anthes, of the Toronto Foundry Co., will be chairman.

The secretary of the American Foundrymen's Association estimates that if the Canadian foundrymen turn out as is to be expected, there will be fully 2,000 at the convention.

AMOUNT OF AIR SUPPLY.

The amount of air to supply has bothered many of the younger furnace men. One reliable way of arriving at the amount is to figure the area of the different hot air outlets and provide a cold air supply area of equal amount to their total. Some provide an area of two-thirds of this amount, which is sufficient when the thermometer is near zero. Others provide three-quarters which is better adapted to the milder weather and still others provide a supply area equal to the entire hot air area. And this is best. It is a simple matter to use dampers to cut down the supply, but if the supply is two-thirds or three-quarters it is impossible to increase it in the spring and fall months, when the furnace must be run and the supply is at so high a temperature that even a moderate fire is liable to over-heat the building.

STEEL CORPORATION SUFFERS.

At the meeting of the directors of the United States Steel Corporation last week, Chairman E. H. Gary submitted the report for the last quarter of 1907, showing a falling off in the unfilled orders on hand to 4,624,553 tons and a drop in net earnings to $32,559,995. These figures reflect the contraction that has taken place in the iron and steel industry in the United States. The orders on hand are the smallest since September 30, 1904, when they stood at 3,027,436 tons. The net earnings, which were slightly better than had been expected, compare with $43,804,285 for the quarter ended September 30, 1907, and $41,744,964 for the corresponding quarter of 1906. The surplus after dividends and all charges for the quarter ended December 31, 1907, was $3,359,274, as compared with $4,911,711 in the previous quarter, and $3,324,545 in the corresponding quarter of 1906.

U. S. WIRE NAIL PRODUCTION.

The following table gives the production in kegs of 100 lbs. of standard sizes of cut nails and spikes cut from plates from 1896 to 1906 in the United States; also the production of standard sizes of wire nails during the same period. The maximum production of cut nails, 8,160,973 kegs, was reached in 1886; of wire nails, 11,926,661 kegs, in 1904:

Year	Cut Nails	Wire Nails	Total.
1896 ...	1,615,870	4,719,860	6,335,730
1897 ...	2,106,799	8,997,245	11,104,044
1898 ...	1,572,221	7,418,475	8,990,696
1899 ...	1,904,340	7,618,130	9,522,470
1900 ...	1,573,494	7,233,979	8,807,473
1901 ...	1,542,240	9,803,822	11,346,062
1902 ...	1,633,762	10,982,246	12,616,008
1903 ...	1,435,893	9,631,661	11,067,554
1904 ...	1,283,362	11,926,661	13,210,023
1905 ...	1,357,549	10,854,892	12,212,441
1906 ...	1,189,239	11,486,647	12,675,886

Announcement

M. R. M. CO.

New Cold Process Horse Nails

As the jobbers and wholesalers are selling Horse Nails at a price per box, and we have been requested to adopt the same course, we take this opportunity of announcing to the trade that in future we will sell our Horse Nails at a base price per 25-lb. box. Base sizes : 10, 11 and 12.

EXTRAS FOR OTHER SIZES :

No.	9	8	7	6	5	4	3
$	.10	.20	.40	.65	.90	1.15	1.65 per box.

If you have not had samples of our NEW COLD PROCESS HORSE NAILS, write us for them at once.

The Montreal Rolling Mills Co.

When writing to advertisers, kindly mention having seen the advertisement in this paper.

BUILDING AND INDUSTRIAL NEWS

For additional items see the correspondence pages. Information is solicited regarding building and industrial news, the incorporation of companies, establishment or enlargement of mills, factories or foundries, municipal water works and sewerage systems, railway or mining news, etc.

Recent Inventions.

F. J. Boehl, Spokane, Wash., has invented an improved wire window screen so constructed to leave openings in the sides by means of which flies may make their escape from a room but will be unable to return.

W. G. Asmus, Cleveland, Ohio, has invented an improved automatic sprinkler adapted for use in warehouses, factories, etc., in connection with the water supply. Acting under the abnormal increase of temperature to distribute water preferably in a spray in the surrounding space.

H. S. Blood, Botteneau, N.D., has invented a stove pipe joint, fitted with a key which forms a connection throughout their circumference, and by thus securing continuous locking between the part the chances of disconnection or breakage of the sections from an unusual strain are lessened.

A furnace grate was invented recently by M. Washburn, Ossington and R. D. Granger, New York. The object of the grate is to provide a system of connected sections, each containing a number of pivotally supported grate bars, and a means for operating the various sections independently.

A. H. Lovejoy, Red Bank, N.J., has invented a new heating system for use in any building, the object of the inventor was to provide a heater made in sections each of which is practically complete in itself. Any number of sections can be placed together according to the amount of heat needed.

R. C. Ezekiel, Carbon Hill, Ala., has invented a vegetable cutter, the knives of which are so arranged as to enable the operator to slice vegetables at different thicknesses. It is an improvement on that class of slicers in which the vegetable is reciprocated over the cutter or cutters fixed in a suitable base or support.

G. H. Garrison, Olympia, Wash., and W. A. Hillis, Portland Ore., have invented a gun sight, particularly adapted for use on single-barrel shot guns. The object of the invention was to provide a durable sight which may be securely mounted upon the barrel and provide a sighting groove to be used in connection with the foresight of the gun.

J. W. Chapman and C. C. Foss, Barwick, Ga., have invented an improvement on nut locks, which permits the nut to be turned home, will hold the nut securely and can be released when desired to permit the bolt to be turned off without any injury. The invention can be used on ordinary nuts without changing the structure.

J. L. Brown, Brookville, P.O., has invented an improved pipe wrench in which a chain is employed as the gripping member. The chain is pivotally operated by means of a ladder provided with means for working the free end, the chain passed around the pipe or other object.

Railway Construction.

It is understood the C.P.R. will build a road from Vancouver to Seattle. The ground has recently been surveyed for the company.

The C.P.R. has issued new stock to the value of $28,000,000. The money will be spent for grading and double-tracking Western lines and in building proposed branches.

Foley Bros & Larson, Winnipeg, have received the contract for the construction of 126 miles of line on the G.T.P. between Edmonton and Wolfe Creek. The contract price agreed was between $40,000 and $50,000 a mile.

Industrial Development.

The Rapid Tool Company, Peterboro, suffered a severe loss by fire on Feb. 1. The blacksmith shop was gutted and several other buildings damaged by smoke.

The statement, that the Brass and Steel Goods, Limited, had established a plant at Campbellford, was not correct. The above company have recently established a plant at Belleville.

The annual meeting of Hundred Thousand Club, Calgary, resulted in the election of the following officers : President, S. L. Jones ; vice-president, A. T. Linton ; secretary-treasurer, Charles H. Webster.

The St. Maurice Lumber Co., Three Rivers, who recently purchased the property on the Restigouche River, operated by the Dalhousie Lumber Company, have decided to expend $150,000 for a new mill.

Herbert S. Ashton, of London, Eng., is organizing a company in Victoria for the purpose of manufacturing Rami goods. Rami is a fibre imported from China, India and Mexico, which, when woven into yarn, is said to be several times as strong as either cotton or silk.

The Canadian Steel Rolling Mills Company will build a branch at Campbellford, the building for which will cost $60,000. In return the town has granted a free site, exemption from taxes and electric power at $10 per h.p. The company will manufacture sheet and bar steel.

The Northern Iron and Steel Company are planning to reorganize. A meeting of the stockholders of the company was held in Toronto last week and it was decided by the vote of a large majority not to assign, and a committee was appointed to initiate a re-organization.

Standard Implement Company, Limited, is the name of a new company organized to take over the interests of J. B. Donald, manufacturer of farm implements, London, Ont., and to manufacture and conduct a foundry under the above name. The company will be incorporated at $75,000, and the provisional directors will be, J. B. Donald and C. P. Heal, London, and E. C. Greenlee, Chicago.

Companies Incorporated.

Collingwood Hardware, Limited, is the name of a new wholesale and retail hardware company, incorporated at Collingwood. The company has a capital stock of $40,000, and the provisional directors are : W. D. White, F. W. Gregory, R. H. Breeze, E. M. White and Frances White, all of Collingwood.

The T. E. Bissell Company, Limited, has been incorporated, with a capital of $150,000, to manufacture and sell all kinds of farm implements and machinery. The head office of the company will be at Elora, Ont., and the provisional directors named are, T. E. Bissell and George Hunt, Elora, and Robert Ewing, London.

The Canada Southern Oil and Gas Co., Limited, has been incorporated, The capital stock subscribed is $100,000, and the head office of the company will be located at Tilbury. The provisional directors are, J. C. Tremblay, Barnable Billard, Ephraim Geroux, Harold Calwood, Elora, and J. D. Wiesner, Hartford, Conn.

The Babb Hardware Co., Ltd., has been incorporated, with a capital of $60,000, and headquarters at Portage la Prairie. The directors are : Alfred Babb, George Kerr Kirkland, merchant; James Armour Lindsay, manager; Jas. Brandon, tinsmith, and Ewan Alexander McPherson, barrister-at-law, all of Portage la Prairie.

Building Notes.

Burnaby, B.C., will spend $12,000 on a school house during 1908.

H. Hutson, Toronto, will erect a series of brick and rough-cast dwellings to cost $16,000.

The contract for the new Government building to be built at Simcoe, has been let to Schultz Bros. for $25,400.

The Sterling Bank, Toronto, has taken a permit to make alterations on their property to the extent of $4,000.

An addition to the building of the Children's Aid Society, Toronto, will be erected this year at a cost of $9,000.

The work of building a new union station at Winnipeg will be started early in the spring and pushed to completion.

The Hospital Governors, Hamilton, have decided to build another storey to the hospital for fever patients, to cost $10,000.

Building permits issued during January at Vancouver total $222,235. The figures for the same month in 1907 were $187,265, an increase for 1908 of about $35,000.

Five new residences are being built in North Vancouver, the permits all being taken on one day by different parties. Reports from the Pacific Province state that building operations are brisk and that the fine weather is bringing out numbers of home seekers.

A Paint Catechism

By G. B. Heckel.

77. What is "Alligatoring?" An incomplete form of peeling, where the paint cracks into large segments, one end of the segment loosening and curling back from the surface, while the other end remains firmly attached, the surface remotely resembling the back of an alligator. When the alligatoring is fine and incomplete it is usually termed "checking."

78. What is the cause of "Alligatoring?" Heavy coats of paint applied to unseasoned wood will alligator, especially if the paint be slow drying, tough and inelastic. Rosin drier in zinc paints is said by Toch to be the chief cause of the form known as "checking."

79. What is the remedy? Scrape or burn the old paint off and repaint with thinner coats.

80. How may chalking, peeling, flaking, alligatoring, etc., be avoided? By the selection of a properly prepared paint and its proper application to a surface in fit condition for painting,

81. What is a properly prepared paint? A paint in which the ingredients are selected with due regard to their physical and chemical characteristics and thoroughly amalgamated into,a homogenuous mixture, extremely fine grinding of the pigments being also essential.

82. What is meant by the proper application of paint to a surface in fit condition for painting? The "proper application of paint" has reference to the consistency of the paint when applied, to the method of application, and to the time allowed to elapse between coats. The fitness of the surface for painting refers to its cleanliness, the nature as well as the condition of the wood, and the state of the weather at the time of painting.

83. How should the consistency of the paint be varied for different surfaces? The painter should understand these requirements. The priming coat, being the one on which the adhesion of the entire paint film depends, should be most carefully considered. It should be sufficiently liquid to penetrate every pore and irregularity of the surface, carrying with it particles of the pigment; but this fluidity must not be obtained at the cost of the future strength of the dried film. For the priming coat it is customary to add a quantity of oil and some turpentine or benzine. It is easy to overdo both. Only enough of the volatile thinner should be used to avoid a high gloss, to which subsequent coats will not readily adhere. Hard, unabsorbent woods require a thicker priming coat than spongy woods, such as poplar, soft pine, etc. Resinous woods, like yellow pine, again, require special treatment—a preliminary varnishing of knots and resinous spots with shellac, and subsequent priming with a fluid priming coat containing an excess of turpentine.

The second coat, which in many instances is also the finishing coat, should be tempered accordingly. If there are to be three coats, the paint should be slightly reduced with turpentine or benzine, so as to promote amalgamation with the priming coat, and to reduce the surface gloss. If it is to be the finishing coat, prepared paint of the average consistency can be used without reduction, but a very little turpentine is sometimes desirable to assist penetration and adhesion.

The third or finishing coat should usually be employed as it comes from the can. In the case of all coats, thorough, hard brushing is essential, and a round brush is always preferable to a flat brush. The failure of paint is frequently due to insufficient "elbow grease" with the brush.

Every coat of paint should be completely dry throughout before the next coat is applied; but it is a mistake to allow a priming coat to "weather" and become weakened before painting is continued.

Will You Stock Success?

Do so, and your customers will buy it. In every tin we send out of FLOORGLAZE ENAMEL it is overflowing with success for the agent who sells it, the consumer who uses it, and for ourselves as manufacturers. One tin sold will sell a whole lot more tins.

Put up in 10 shades, send for color card.

MONTREAL — TORONTO

NO ORDER TOO LARGE. EXTENSIVE WORKS AT VALLEYFIELD, QUE.

Too much drier or japan, or cheap rosin japans are at the bottom of many paint failures. The manufacturer of a scientifically prepared paint will introduce the proper kind and quantity of driers into his formula, and none should be added in use.

(To be continued).

Paint and Oil Markets

MONTREAL.

Montreal, Feb. 7.—Snow and blizzards have impeded the work of the traveling staff of the various concerns, and orders have been slack this week. There has been no change in prices, and the situation is very dull. Turpentine remains firm at last week's advance, while ground white lead has shown no further sign of weakness.

Turpentine—Arrivals are very slow, owing to the snow blockade, and quotations are in consequence extremely firm. A good round lot would be hard to obtain, but buyers are cautious and are only purchasing for immediate wants. We quote: Single barrels, 75c; wood distilled turpentine, pure, 69c.

Linseed Oil—There is no change in price to note. Shipments are not over brisk and the market may be described as being steady and unchanged at raw, 1 to 4 barrels, 57c; 5 to 9 barrels, 56c; boiled, 1 to 4 barrels, 60c; 5 to 9, 59c.

Ground White Lead — This article is moving, perhaps, more freely than any other item in the market. There is such a contrast in present quotations compared with those prevailing a year ago that nervousness seems to have been dissipated, and buyers are coming forward freely. We quote: Government standard, $6.25; No. 1, $6.

Red Lead—There is very little business doing, and prices are nominally as follows: Genuine red lead, in casks, $5.75; in 100-lb. kegs, $6; in less quantities at $6.75 per 100 lbs. No. 1 red lead, casks, $5.50; kegs, $5.75, and smaller quantities, $6.50.

Dry White Zinc—There is a slight improvement noticed in the demand for dry white zinc. Prices remain as follows: V.M. Red Seal, 7½c; Red Seal, 7c; French V.M., 6c; Lehigh, 5c.

White Zinc Ground in Oil—Unlike white lead, there has been no fall in quotations. The lower basis of genuine white lead as regards price has apparently affected the shipment of white zinc ground in oil, without, however, changing the quotations which are as follows: Pure, 8½c; No. 1, 7c; No. 2, 5½c.

Varnishes—Shellacs have eased off in value, and this has encouraged a little more business. The factories still buy very carefully but the makers of varnish are carrying ample stocks with a view to a stronger demand later on.

Putty—This line is extremely quiet, and some grinders have for the time being ceased manufacturing. The demand, however, is improving. We quote: Pure linseed oil putty, bulk, in 800-lb. casks, $1.75; in 25-lb. iron drums, $2.05; in 25-lb. tins (3 in a case), $2.15; bladder putty in barrels, $1.95.

TORONTO.

Toronto, Feb. 7.—The extreme cold weather and heavy snow falls which have marked the first week in February have set back orders in the local market to a great extent. At present the market is very dull and no changes in quotations have taken place during the week. Travelers who were caught in small towns are again in touch with their firms, so the inactivity of the week will be only short-lived.

Turpentine—There are reports of another raise in the price of turpentine from the south, but at present local jobbers are still quoting last week's prices. Several shipments have arrived during the week and others are expected, so the supply is again amply sufficient for any demand likely to be met for some time. Buying is still cautious, most dealers buying for immediate needs only. We still quote; Single barrels, 75c; 2 to 4 barrels, 74c. Less than barrels, add 5c per gallon.

Linseed Oil—This commodity remains firm and the demand for larger shipments is on the increase. No further change has taken place on the foreign market and the expected advance in prices has not yet overtaken the local markets. Shipments for Toronto have been impeded by the snow blockades during the week and as a result the supply at present is comparatively low. We still quote: Single barrels, 60c; 2 to 3 barrels, 59c; 4 to 9 barrels, 58c. Add 3c to this for boiled oil, f.o.b. Toronto, Hamilton, London, Guelph and Montreal. Terms, net, 30 days.

White Lead—No further change has taken place during the week; the market is dull and uninteresting. The revision of prices quoted in last week's report still prevails, with no demand. The market is in an unsettled state. Prices for this week are as follows:—Genuine white lead, $6.25; No. 1, $6.

Red Lead—Prices remain firm and the demand continues fair considering weather conditions. The prevailing belief in local circles is that the bottom price has been reached and though a rise has not been predicted, a revision is apt to overtake the market in the near future. We still quote: Genuine, in 100-lb. kegs $6; Genuine in 560-lb. casks, at $5.50; No. 1, $5,

Petroleum—An average winter demand exists at present and no change in prices has occurred during the week. Quotations remain: Pratt's Astral, 17½c; water white, 15c, and prime white 13½c.

Glass and Putty—Glass is moving freely at present at a small increase in quotations, and the demand for putty is beginning to assume spring proportions. Prices of putty remain unchanged:—Bladders, $1.95 per 100 lbs.; less than barrels, $2.10 per 100 lbs.

Shellac—Prices remain firm with a

YOU DON'T TAKE COUNTERFEIT MONEY

Let the same principle apply when you buy green, either dry or ground in oil. There is only one

Imperial French Green

that is genuine. Made since 1863 by

JOHN LUCAS & CO.

New York Philadelphia Chicago

fair demand at present. Competition is very keen at present, and reports of some cutting have been noted. Prices remain: Pure white, in 5-gallon lots, $2.25; pure orange, $2; and No. 1 orange, $1.90.

Varnish—The demand is fair and prices remain firm. Quotations are as follows: No. 1 furniture, in barrels, 65c; elastic oak, in barrels, $1.25; light hard oak, in barrels, $1.05.

TESTS FOR LINSEED OIL.

This is the time of year that dealers are buying their stocks of paint for the coming season and the importance of having the paint mixed with pure linseed is apparent. Adulterated oil is in the market and with the comparatively low price of linseed at present, the "doped" oil must be sold at a price so near to the value of the pure, that it is a rank imposition on the buyer. When the oil buyer can get pure linseed at 59c a gallon it is sheer folly for him to buy adulterated at any price. Test all oil, and if it proves to be mixed with fish oils, animal oils or minerals oils, don't buy it. There is no possible justification for either buying or selling adulterated oil.

Pure linseed oil is straw-colored in its raw state and amber when boiled; it weighs approximately 7½ pounds per gallon, boils at a temperature of 320 degrees centigrade, or 640 degrees Fahrenheit, and its specific gravity at 59 degrees is .9290 raw, and .9411 boiled. A chemical test which may easily be used by any dealer is to put equal parts of the oil and nitric acid in a small bottle and shake up, then allow the mixture to stand for about half an hour, after which, if the oil is pure, the upper stratum will be green and the lower colorless; if adulterated with rosin oil, the upper stratum will be black,; with mineral oils, brown or yellow, and with fish oil a deep reddish brown, and in this latter case the lower stratum will take a deep red or cherry color.

The hydrometer test is not always available, as dealers as a general thing do not have a hydrometer. This test is, however, used by large paint manufacturers and is very reliable. The specific gravity of pure linseed oil in its raw state is .9290. Determine the specific gravity of the oil under test and if it is less than the figures of pure oil, the presence of a lighter oil, such as petroleum or cotton seed, is indicated, and if greater, one or more of the heavier mineral or fish oils has been used. In working this test, it is very important to be accurate and by determining the specific gravity about four times and taking the average as the correct figures the result should be found to correspond with the given figures, or the oil is beyond doubt adulterated.

The freezing test is very simple and also accurate and will probably be of more general advantage to the average man than any of the other tests for reason of its simplicity. Prepare two glass vials or bottles with the oil, one of which is pure, the other, oil to be tested, and immerse in a quantity of crushed ice and salt mixed in the proportion of two to one. If the oil being tested is pure it will solidify at the same temperature as the sample experimented with, namely, at about 17 degrees below zero. If the oil under test freezes at a temperature around ten degrees, it is adulterated with cottonseed or petroleum.

A simple test may also be made by dropping pure oil into a vessel containing adulterated oil. Let a drop of pure oil fall into the adulterated oil. If the oil goes to the bottom it means that oils of a lighter specific gravity than linseed are contained, if the drop floats it is equally sure that oil of a heavier specific gravity is used, but if it mixes evenly with that of the oil being tested it is a sufficient guarantee that the oil is pure.
